NO-GO ULTRA 64?

Is Ultra 64 coming or isn't it? We've heard some nasty rumblings from Nintendo Japan and it isn't just morning-after curried sushi syndrome...

Disturbing rumours have reached our ears that Nintendo have been forced to scrap the Ultra 64 because of its high manufacturing costs. Nintendo, who originally claimed a \$159 price-point, have apparently been told by development partners Silicon Graphics that the minimum costs for the basic hardware would be \$349. Add to that other components such as joypads, CD drive, packaging and distribution and we estimate a UK retail price would have to be set at around £750.

If this is true, Nintendo won't be able to survive in the home market just with the Virtual Boy (see CES report last issue), so the likelihood is it would plough its money into on-line systems and set-top boxes. However, Nintendo has recently signed up UK-based company Software Creations as an Ultra 64 developer - which either means Nintendo is staying involved with the coin-op hardware, or that the machine is still going to happen. More news as we hear it.

ALIENS IN AREA

With Acclaim gearing up to launch their remarkable Alien Trilogy on PC CD-ROM this autumn, Wakefield-based Team 17 look like they're going to steal the march on them. Currently in production is a 3D version of their not-unlike-Aliens smash Tower Assault. It promises to deliver the same kind of pulse-battering action as the 2D versions, but with incredible 3D graphics – and it's on Amiga. Just feast your eyes on these pics. There should be a PC version scampering along later in the year

SATURN VIRTUA RACING REVS UP

Time Warner, not Sega, will be producing the Saturn version of Virtua Racing. The game, which is scheduled for release at the end of the year is going to be an enhanced version of the coin-op, mainly because of its improved graphics and more tracks.

Warner also releasing the Saturn version of hit coin-op Primal Rage around the same time. The game's being converted by Probe, and is destined for just about every format around – including Mega Drive, SNES, Amiga, PC and 32X. Work in progress coming soon.

FLOPPY TAKES A CARPETING

Bullfrog's CD-ROM mega-smash Magic Carpet is set to appear on floppy disk this summer. It turns out that the game engine itself doesn't take up too much space and will happily sit across four old worldie diskettes and all you lose are a few sound effects. And speaking of Carpet-connected disk stories, Bullfrog have just released a data disk for the game containing 30 new levels and should be in the shops right about now.

It also looks like there's going to be a 3DO version in the offing as well – let's just hope it doesn't end there and we see it on PlayStation or Saturn too.

▲ The 3DO version of Magic Carpet is due to roll out later in the year, possibly around Christmas time.

DON'T BUY THIS

One minute we're sitting back pleasantly watching all these wonderful next-gen games roll in at the heady rate of three a month, then Cosmic Race comes along. It's quite unlike any race game we've ever seen. You control this sort of levitating bike thing which bobs around nicely in 3D, and that's it really. In fact it's totally crap, so we'd thought we'd tell you about it so you don't rush out and blow nine million quid on it, or whatever importers are charging at the moment.

▲ Bigger and better – Virtua Racing Saturn promises to be great, but Daytona'll be here first.

Please don't waste your money on this – it sucks.

◀ It's one of those bikes out of Battletar Galactica.

▲ *Shinobi X on Saturn has slipped on Sega's release schedule. When it arrives though, with its digitised characters, it should look top.*

LATE AGAIN

Last month we said we'd have *Shinobi X* for you this issue, but Sega has put its release date back yet again.

We'd like to say to you it'll be here next month, but we're not going to stick our necks out again...

OCEAN GET TUFF

Aeons ago we previewed a promising platformer from SCI called *Mr Tuff*. Well it still has potential, only now it's coming from Ocean. The game, which is currently only on SNES is due out in April, so we'll tell you if Ocean has scored a hit or should have held on to its cash next issue.

CLOCKWORK KNIGHT WOUND UP FOR UK

Sega's more-miss-than-hit platformer *Clockwork Knight* promises to arrive in Britain with the Saturn, and a suitably revamped image.

The game, which rated a moderate 74% in the February *ish*, will have more levels than the miserly four it came with in Japan. If that's the case, and Sega isn't telling porkies, it could be one for potential Saturn owners to add to their hit list.

▲ *An improved Clockwork for UK release?*

▲ *Ocean has a pile of releases for the next couple of months, including the Mega Drive Mister platformers Mr Nutz and Mr Tuff. Tough cookies, or nuts?*

PLAYSTATION PC BOUND?

With Creative Labs' 3DO Blaster card already on the shelves, rumour has it that Sony is working on a similar project to furnish PCs with a PlayStation equivalent. The board, which would plug into the standard PC slots would only make use of the machine's power source, monitor and CD-ROM drive. However, the same time we heard this little story, we also heard a conflicting report that, no, Sony isn't working on a hardware add-on, but is actually planning to convert some of its third-party PlayStation games to PC. This sounds a bit silly because without custom graphics hardware only Pentium machines and above would be capable of running games such as *Ridge Racer*. We should know for sure this September when the PlayStation is launched.

YABBA DABBA DIDN'T

Fans of the *Flintstones* movie (if such a beast exists) will be pleased to know that the game is finally set to surface on Mega Drive next month – courtesy of Ocean.

You know, one day someone will bring a game out the same time as a movie. But then again there's probably more chance of John Major turning into a three-headed Zamwoo from the planet Plim before that happens.

▲ *Flintstones next month.*

SPRINGTIME FOR JAG CD

The Jaguar CD unit is due to be launched this spring; there are no software releases confirmed yet, though.

At long last the Jaguar CD drive is set to appear. Atari is promising it will hit the shelves before summer priced at a mere £149.99. The unit is officially due to be launched at the spring ECTS show at the end of March, with the general launch following a few weeks later.

The machine itself fits into the Jag's cartridge slot – but don't worry about having to unplug every time you want to play a cartridge game. Atari has sensibly built a through-port into the device so once it's in you never have to unplug it. As for software, well, there hasn't been a confirmed release yet, and, worryingly, there weren't any on show at the press launch. However Atari's marketing manager Darryl Still was confident of having at least six titles on the shelves with the machine. However, we did get a chance to play with the built-in virtual light machine, which produces loads of incredible effects in time with audio CDs. It's hardly a reason to buy the unit, but it's very impressive all the same.

ROCK, SCISSORS, JABBERCRACKERS

Our spies in Japan have tracked down one of the reasons why the 3DO has done very well out there. Go into any 3DO software stockist in Tokyo and you'll find shelf upon shelf of "adult-orientated" software. It looks as though the Japanese have got this stuff down to an artform. Being the investigative types we are we thought it necessary to look into this burning issue. Of the titles we sampled, the most interesting has to be Strip Rock, Scissors, Paper – a sort of updated version of the old playground game. It really is sordid stuff. Choose either rock, scissors or paper, a young lass makes her selection and if you win she loses an item of clothes. I don't know, any excuse for a bit of porn.

No taxing gameplay here, you have a one in three chance of winning and getting these women to take their kit off. It's as sad as it looks.

STAR WARS SET FOR SATURN!

As yet unconfirmed reports from Sega have reached us that it has already wheeled out the development wagon for a Saturn-specific Star Wars game. Provisionally titled Rebel Strike, it looks like taking the best scenes from the three movies and combining them in one game. The speederbikes from Return Of The Jedi are most likely to feature along with plenty of space combat. If this is the case, and Sega is working on this (face it, it would be dumb not to) it's unlikely we'd see anything before the end of this year.

▲ The rumoured game heading for the Saturn, Rebel Strike, is probably going to be an amalgamation of the Star Wars Trilogy films.

Big credible licences are what the new machines need, and a decent Star Wars game would do the Saturn a lot of good. ▶

VIRTUA FIGHTER FOR NEPTUNE LAUNCH

Sega has confirmed that the Mega Drive 32X System – the all-in-one Mega Drive and 32X unit – will arrive in September. Previously known as the Neptune, Sega is hoping to hit a retail price of under £200 and possibly bundle it with Virtua Fighter. If Sega manages to do this it would be nose-to-nose with the Jaguar for a stake in the entry-level console market.

Although these are Saturn shots, the 32X version of Virtua Fighter promises to be almost identical as the machine uses the same processors.

▲ Sega hasn't set a price for the Neptune, but it should be around £200.

ONE MOTHER OF A GAME

Another title set to appear around the same time as the 32X System is this excellent-looking shoot-'em-up called Motherbase. We had a sneak-peek at Sega's HQ and can tell you this game looks like being really hot. It's a sort of vector-graphic-based version of Viewpoint, but faster and more varied. More news soon.

If this plays half as a good as Viewpoint, Sega will be on to a real winner. We're certainly looking forward to it.

SEGA GETS BACK TO BASICS

With everyone gearing up to produce amazing 3D and polygon-based games, Sega has stepped out of line and produced what looks like being a red-hot platform-based shoot-'em-up. Alien Soldier, from top programming team Treasure, is completely over the top, but combines some superb features to make a game that we can't wait to get our hands on. Watch out for it this summer.

▲ From the team behind the excellent Gunstar Heroes – Alien Soldier looks like being a real smash.

BURNING DISCS

Silica Systems has taken the lead by offering the first quad-speed drive for under £200. The NEC CDR-271 is one of the fastest conventional CD drives available, and Silica supplies it complete with £100 worth of software – including MicroSoft's excellent Encarta. If you haven't upgraded to CD-ROM yet, this is the drive to go for. Even if you're running off of a double speed, this is still a very tempting offer. Contact Silica on 0181-309 1111 for information.

▲ PC CD games can be yours for under £200 with the fast NEC-271 CD drive.

POWER DRIVE RALLY

Check out that kooky tunnel lighting – just like the real thing, eh? ♥

Surely there can be no more townie a sport than rally driving. Let's face it, rally driving is a sport where men with moustaches drive Escorts over some muddy hills at high speed. What's amazing, though, is the number of people who turn up at various points along the course to watch. Why? The cars set off about

ten minutes from each other, so you've got no chance of seeing an exciting battle for pole position. Indeed, unless you happen to be parked at a particularly dangerous bend all you're going to see is a succession of Escorts going past. You'd be better off sitting at the exit of a housing estate cul-de-sac – at least you might get to see a Capri if you're really lucky.

But perhaps this is being uncharitable. Rally driving is probably quite good fun as a participator sport. Someone obviously thinks so, because all the joys and splendour of rally motoring have been packed into a winkle Jaguar cart thanks to those kooky Time Warner types and its forthcoming Power Drive Rally game.

NO TALKING, SCUM

Bonus levels aren't something you expect when you play driving games, it has to be said. But that doesn't stop Power Drive Rally having one, oh no. From what we can work out, it's a sort of driving test thing, where you're judged upon the speed and accuracy with which you perform a number of manoeuvres. This should also give you the opportunity to get a bit of fine-tune practice in before the next level. Hooray!

Power Drive Rally is an overhead view, rotational steering effort which features an assortment of courses and conditions. And that's about all we can tell you at present, apart from the fact it looks rather promising. We'll tell you all about it in the review in a couple of months' time.

▲ Cop a Mark Thatcher out here on the desert courses (except Mum won't be able to call out the entire airforce to look for you).

TRACKS OF YOUR STEERS

Rallying might make a rubbish real proper sport, but it looks like a really good idea for a video game. The variety of courses, weather conditions and lighting means each race can be completely different from the last, which obviously bestows major lastability potential. In the spirit of the game we thought we'd be caring and sharing and show you just some of the tracks you can expect from the finished cart.

PLAYSTATION On Import

Oh! You! Yeah, you about to turn the page. Stop right there and read this, it's bloody priceless.

Look, forget about this game, it's crap — it's the story that makes it good. OK, sitting comfortably? Right. You see there was this king called Love-Radiant III, who lived in the castle of LoveRadiant on the planet LoveRadiant, which apparently is a nice place be if you're the sort who can live life without watching The Sweeney.

Now LoveR III has two twin daughters, Nina and Syllin who, despite all this love and stuff are a bit good at scraggin'. Anyhow, the evil Carmilla turns up (you can tell she's evil 'cos she wears the black costume and employs unrealistic-looking cartoon henchmen), who's a younger version of that Repulsor woman out of Mighty

twin goddesses

Morphin' Power Rangers, kills their old man, nicks Castle LoveRadiant and turfs the girls out on the ears.

Anyway, for some reason Zeus (as in the grand god of kebab herders) steps in and gives the two girls the powers of Love and Courage. Ahh. What this means is that their tight-fitting spandex leotards morph into tight-fighting spandex leotards — with plastic bits. After that,

which is played in a rather tasteful movie sequence, the game starts and it's all down hill from there. It's a laff though, ain't it? Unless you buy it, that is.

▲ It looks good, doesn't it? Well it bloody well isn't. These screenshots are flattering.

▲ That's your bird, that is. Oh well, what did you expect from this caption?

▲ Live action meets cartoon. Just like Roger Rabbit, but crap.

▲ All the characters in this game get down and boogie after a win.

◀ We could be dancing, yeeah. Boogie all the night. Etc.

VERDICT

PLAYSTATION

Few beat-'em-ups could rival this. The game itself is a steaming pile of pimply (I can't use the word I want to here) crap. There are almost no moves, only six enemies, the controls suck and the graphics are pathetic. It's not even in the category of so bad it's good (although how something crap can be good when you've spent your money on it is beyond me). The plot's hardly a reason to buy the game, but I liked it and I've already got my one-way ticket to the world of LoveRadiant, even if it does sound like a dodgy all-night hippy rave.

IT'S ON TELLY TOO, Y'KNOW

D'you know that Twin Goddesses is actually quite a popular TV show in Japan? The disc comes complete with an extract, so we thought we'd show you it just to prove we weren't making things up. And it's not a cheap way of boosting sales by printing pics of semi-clad Japanese girls. Not at all. So don't bother writing in.

The new machines

LET THE BATTLE COMMENCE!

Cybersled features the usual beautifully pre-rendered intro that we've come to expect from these new fangled machines and shows the six sleds having a good old scrap over one of the maze-like levels courtesy of some inspired camera angles.

Follow that red arrow to home in on your foe. ▶

◀ The split screen two-player mode lacks the feeling of immersion that the linked-up arcade original had.

■ PLAYSTATION ■ Namco

Namco's second arcade conversion hits the PlayStation, but can this blaster match the exhilaration of Ridge Racer?

Do you remember a crusty old coin-op called Battlezone? Bearing in mind that it debuted some 15 years ago, Battlezone's graphics are a bit ploddy by today's standards, and comprised garish green wireframes overlaid on a black background. Set over a flat landscape with odd bits of scenery to hide behind, the aim was to destroy your opponent's tank before he trashed you. Simple but highly playable basically.

Whizzing through the

cosmic threads of time to 1995, Namco's Cybersled follows a similar pattern. Except the graphics now consist of polygons (which in this version are fully texture mapped with an option to select the plain polygons of the arcade version), while the levels are set over a number of maze-like areas that become increasingly hard to manoeuvre around. These levels are lit-

tered with pick-ups which include missiles and shield boosters, plus a number of other special items, like the computer which will jam the enemy's missiles and radar.

Two views are available

for each of the six controllable sleds; the standard above-and-behind or the more realistic but difficult-to-control first-person perspective. Each sled has a rating out of five in three categories: weapon and shield strength and speed. The sleds tend to range from lightly armoured but extremely fast affairs to a high powered and ultra strong behemoth that moves as well as an elderly elephant with no legs. They all share one thing in common though, their guns overheat very quickly, so stay off that trigger until the enemy is slap bang in the crosshair.

6. Alan Striker: Mr speed but severely lacking in those all-important weapon and shield strength departments.

MEET THE GANG...

The Cybersled pilots are a varied bunch but they all have one thing in common - damn stupid names

1. Amanda Bates: Ms Average. But pretty handy in the weapons department.

2. Hans Balrd: blessed with a decent shield but Hans suffers from a rather slow speed rating.

3. Madison Hawk: hey everyone, it's Mr King Average with straight threes all round.

4. Marie Yamamoto: if Madison's king average then Marie is most definitely his queen.

5. Rex Ironside: not a bloke to check off, Rex is packing one big weapon (missiles!).

Like *Starblade* on the 3DO, Namco has provided the original graphics as well as a souped-up texture mapped alternative. ▶

▶ Missiles dish out the damage, so a few direct hits should ensure victory.

▶ An interior view is available but unlike *Ridge Racer* it's harder to play with.

SECOND OPINION

I can't say I was the biggest fan of the original arcade version of *CyberSled*, but even so this comes as something of a disappointment considering how smart Namco's PlayStation version of *Ridge Racer* is. This plays like an arcade game in that it's great fun the first couple of plays, but it soon becomes repetitive and while it might be worth spending a couple of quid on it in the arcade it certainly isn't worth 90 of the bleeders. If you're looking for a class blaster on the PlayStation then *Raiden* is far more deserving of your cash.

MARK PATTERSON

ALTERNATIVE

ARCADE

■ *CyberSled*

■ About a quid

The original arcade game is starting to look a little crumbly but is still a decent enough blast, especially with a mate.

■ ISSUE 149: 82%

VERDICT

PLAYSTATION

CyberSled lacks variety and as a one player game soon becomes tiring. The original's saving grace was its two-player link up but the two-player on offer here is split screen and dull. The imaginative *Battlezone*-style controls have been dispensed with and in their place are two cumbersome control methods. As an arcade conversion it's admirable though, and the graphics are actually better thanks to plenty of texture mapping. It's also a shame that Namco didn't add in new features to the home conversion like it did with *Ridge Racer*.

pretty sailor soldier moon

the new machines

Under-dressed young girl enthusiasts will doubtless be flocking to buy Saturns following this news that dodgy Japanese cartoon Pretty Sailor Soldier Moon is all set for a beat-'em-up happening on Sega's new machine. Starting a cast of unwisely-proportioned schoolgirls, nurses and other characters in uniform Pretty Sailor Soldier Moon is nearing completion right now. A full review will be on the cards if it's any good.

the new machines

Mega Drive fans may find the shots of this as-yet nameless PlayStation shoot-'em-up/platformer somewhat familiar. Here at CVG we were struck by its similarity to the Treasure classic GunStar Heroes, but without the groovy action poses of the main characters. Given the potential the PlayStation offers for megabosses and huge numbers of levels, combined with the amount of big weapons and explosions known to be in the game (just check out the screenshots) this is a major contender for Third Decent PlayStation Release. Watch this space. Although nothing'll happen. It's just a piece of paper you know.

hebereke's popoon

■ SATURN
■ Sunsoft

The magnificence that is Hebereke's Popoon is right now scrambling wild-eyed towards the Saturn. Our little flightless fowl friend and his wacky pals Oh Chan, Jennifer and Sukezaemon star in a 32-bit conversion of their 91% rated SNES puzzle game. But this is no ordinary Hebereke's Popoon, oh no, it's a full-on super-update which takes the basic formula of the original and throws in a whole caboodle

of new features, such as levitating Popoon blocks and other such Hebereke-type weirdness.

More than this we're not at liberty to say as Popoon Farmers of the Apocalypse (as it no doubt won't be known) is still in an early stage of development. Rest assured though, fact fans, as soon as there's a scam to hear you'll find yourself hearing it from us first.

▲ We're expecting lots from Hebereke on Saturn.

▲ Oh dear, death would appear to be imminent in this situation.

■ PLAYSTATION
■ Seibu Kaihatsu

Raideen is a title familiar to all gamers players by now. Yes, it's the name of the thunder god character from the Mortal Kombats. And now he has a game all of his own, a platform adventure in which you guide the eponymous hero around his house, collecting golden coins before a final confrontation with the evil Doktor Hairline.

Oh, OK, you've caught us, that's all a fib. Raideen was actually one of the most popular shoot-'em ups from about four years ago. It was pretty much the last word on

top-down scrolling blasters, constantly packing the screen with a variety of enemies and granting the player a huge arsenal of major weaponry.

And now this veteran of the scene has been granted a new lease of CD-style life with the PlayStation title which features not only a full conversion of the original coin-op, but also a PSXised update-stroke-sequel. It's been quite a while since a game of this type landed on any console, featuring no polygons, no texture mapping, an almost complete absence of 3D elements and billions of fiddly little enemy

aliens to contend with. Of course, things have moved on considerably since Raideen days, but if any game can re-establish the shoot-'em-up on the new consoles, this is probably the one.

SCREEN THREE

Raiden, unlike most games of the genre, doesn't confine itself to your screen. As you play events around the periphery of your vision continue as normal - which usually means someone's shooting at you. There are two ways you can alter the screen to get a better view of the opposition (and more room to avoid them). The first is Panorama Mode which expands the thin strip of play area to fill the screen, meaning more sideways movement but less fore and aft play. The best setting is Arcade Mode which runs the picture up the longer part of the screen, meaning you need to turn your telly on to its side to play the game properly.

Use smart bombs sparingly - you'll need them for the bosses. ▼

▲ The arcade conversion is an almost exact replica of the coin-op.

The little fairy that you can see here distributes random power-ups. ▼

▲ The bosses in Raiden are, without exception, very large indeed and take quite some killing.

Keep an eye on what's happening to the far-left and right of the screen or you'll come a cropper.

VERDICT**PLAYSTATION**

All right, so Raiden doesn't exactly look like a groundbreaking piece of 32-bit software for Sony's new hardware star, but it's still one of the best games to be released on the PlayStation so far. It's nice to play a game which relies on playability and challenge to impress, as opposed to a half-cocked 3D control system or somesuch. Both the games on the disk are incredibly rock hard, even on normal level and should keep the best gamers going for some time. Easily worth a go. (Watch out for the easy to find cheat though.)

SHOOT THEM TO BITS

Raiden harks back to the days when power-ups were power-ups. When simply collecting a few icons would arm your sprite with an array of weapons which sweep the screen clear of enemies in milliseconds. There are three, count 'em, different kinds of power-ups. One switches your main gun between a rapid-fire cannon, a powerful laser and a homing beam (each of which can be powered-up three times), the second grants the use of extra missiles (forward firing or homing, depending on the icon) and the last, ever handy smart bombs. There are two types available, one which produces a single huge explosion and one which ignites a number of little explosions. The second is the more powerful weapon, but it does need careful aiming for maximum effect.

▲ The homing laser is the most versatile weapon in the game.

Millennium is one of the larger developers in this country, but it's slightly hampered by a close association with James Pond. That's who most gamers think of when the word Millennium is proffered to their shell-like. Quite understandably in these days of gourard shading and rendered texture-mapping the

Cambridge lovelies are keen to shed this fuddy-duddy old platform image and unleash a whole new gaming beast unto the world. We decided to go and have a look around its newly-expanded nerve centre and get the scam on its all-new PC/PlayStation/Saturn projects. So we did.

silverload

■ PC CD-ROM

Silverload, while some way from completion, is already looking extremely promising. It's a Wild West werewolf story with a large cast of strange, eerie and hilarious characters, each of whom has a whole oration of sampled speech. The format of the game, while borrowing an RPG-style interface, is more like a comic book.

Indeed, Millennium is touting Silverload as an interactive graphic novel and it might not be far wrong with that description. The visuals are absolutely superb, the game itself so far seems highly rock-hard and you could cut the atmosphere with a big axe. Hopefully we should get our hands on a fully playable version of this promising game very soon indeed.

Various Millennium bods have had their faces borrowed for Silverload's graphics.

We hasten to point out that no-one at Millennium looks like this. They're all lovely.

■ PC/3DO/PLAYSTATION/SATURN

Whilst DefCon is in a very early stage of development indeed it's one of the games Millennium is banking on. The PC version shown here will be released about two months before the expanded PlayStation conversion (which is already underway). DefCon 5 features an incredible wealth of graphical detail as well as astounding game logic (all the futuristic space buildings have been checked out to

make sure they could actually stand in real life). The game itself mixes up just about every style of play, from shoot-'em-up to strategy in order to keep everyone happy and glued to the screen. Here at CVG, all we can say is 'hope it doesn't turn out to be crap'.

■ PC CD-ROM

Now this is one of those games you know is going to cause some trouble. The programmers of Deadline have been hard at work with a consultant from S9, the hostage rescue and shooters wing of the cops, to produce what they reckon is the most realistic simulation of any hostile situation ever. You play the part of a hostage rescue team leader faced with 20 difficult situations with tight deadlines. You have to research the situation, plan your attack and then implement the rescue.

Your groundwork is as important as your blasting skills, and with reams of video footage and sampled sound it should be just as much fun. Of all the products

Millennium was showing off, Deadline looks to hold the most potential playability. Rest assured that we'll be reviewing this one with a passion as soon as humanely possible.

Kill loads of people in deserts in Deadline - ace!

Not even swimming bath terrorists are safe from your mighty wrath!

scroll

■ PC/MAC

This will be the first of Millennium's current titles to be released. It's a point-and-click adventure with rucks of sampled speech and a large number of rather gorgeously hand-drawn locations to visit. The storyline concerns an ancient scroll and some Egyptian intrigue. You, as one of two characters (each with their own objectives) have to solve the riddles and save the world. Millennium are planning to release Scroll at mid-price, aiming it more at novice RPGers and new computer owners than die-hard gamers, but the presentation should arouse the curiosity of most people.

Bleeding corpses, filthy big guns, dimly lit mazes, it must be a Doom clone. But this is on the Amiga so what's going on?

ANGST

No is not a very useful word really. Think back to all the times your dear old mum told you not to do something, and you went ahead and did it anyway. Something similar happened on the Amiga with most people generally agreeing that the classic PC blaster Doom, or something similar, couldn't be programmed on the Amiga. Not because the machine lacked power, but because of something rather dull to do with the way that the Amiga handles pixels.

At the end of last year though, a number of software companies changed their minds. First on the scene was Alternative with the enjoyable, if limited, Deathmask, and this year we can expect Team 17's Alien Breed 3D and the as-yet-unsigned Fears. Slotting in between these two releases

is Angst, which follows a similar path to Death-mask and co. To get round the pixel-handling problem the viewing screen fills only about a fifth of the screen, but what's there shifts quickly, smoothly and is reasonably detailed graphically.

The aim of the game is the same as in every other Doom clone. Wander around a first-person perspective maze, blowing the living crap out of anything unfortunate enough to cross your path

and solve the occasional simple puzzle. Angst has a space-based theme so not only will you have to contend with the usual assortment of mythical creatures, but there's also plenty of robot-based foes too. Thankfully there promises to be loads of weapon collectibles to even the odds out a little.

▲ The icons enable a player to move, change or fire a weapon and repair some damage via a medpak.

▲ The levels are very similar looking. The only thing that changes is the background colour and the baddies.

▲ This is a space-style Doom clone, so the baddies are more of your robot variety than hell-like demons.

▲ Death comes all too quickly in Angst, there's a definite lack of spare ammo clips lying around.

▲ Killing this Jurassic Park reject results in said creature letting rip with a roar of pain (and plenty of blood!).

INTRO DUCING

Angst's intro is unfortunately not the most exciting thing ever to be seen on the Amiga. The prerendered graphics are pretty but the problem is they fill only about a fifth of the screen, just like the main game-viewing window. Here's a look at three of the best moments for your delectation...

▲ The game's aim is to find the lift which will take you to the next level.

Multi-million dollar deals are made or broken over a game of this oh-so-elitist sport and it's even been blamed for the world-wide homeless problem — acres of prime building land given over for the pursuit of a silly white ball. Well to ease your conscience Core Design is working on a golf sim which you can play without energy, guilt or mega-bucks.

Options galore is the name of the day with currently these four courses to choose from: Hampshire's The Bowery, Ireland's Kilmarney, the Cornish Pennero or Scottish Camoustie — all of which have their own characteristics and pitfalls. Up to four players will be able to meander round nine or 18 holes in Practice mode on any course; do the rounds in Tournament mode; piling up the cash in the Skins Challenge; go for team-work in the Derby Scramble or again shoot out for cash in Shoot Out where the com-

puter selects three holes to go for at random.

Core is adding scores of different camera angles from which to watch your player or your ball taking flight — all emphasising the detail of the 3D environment. You will also be able to change the wind speed, your driving, chipping and putting strengths, the height of the courses' obstacles and the clothing, skin and hair colour of your players. Plus there's even going to be a flip map option allowing you to play the course backwards, which effectively gives you eight courses. Check next issue for a full review.

The basic gameplay and tiny in-game graphics remain unchanged from the originals, but the memory size of the CD means there's an awful lot more game than there was previously. Shining Force first drew attention to itself via the lovely graphics used in the combat scenes. Instead of relying on the litely little main sprites to convey the atmosphere of a barny, the programmers added large cut scenes to illustrate the action. There are now more of these than ever before, and luckily they haven't been replaced by grainy FMV footage of a man in a rubber suit waving his arms around.

IMMERC

It's got to be Perfect. So thought the team behind EA's new 3DO blaster since you have to enter the virtual world of Perfect and do it to 'them' before they do it to you...

Appearances can be deceptive. For all intents and purposes this game looks like it comes from the Metal Head and Iron Soldier stable of games. *Immercenary* however is a different kind of horse altogether. Although it has a polygon-based, first-person isometric shooter exterior the game's interior is far more complex, and the 3DO's FMV capability has been brought to the fore with movie clips actually being integral to the game, as opposed to just being a fancy intro clamped on to the front.

Perfect. I don't mean the game, you're going to have to wait until next issue

for the full review for a final verdict. Perfect is the virtual world (this is the 'futch' you see) where you don the fighting pants of a mercenary. The objective is to shut down the 'system'; and no you're not some 'got any spare change' anarchist who has to bring down the system of commerce of government. No your task is slightly easier in that all you have to do is shut down the tyrannical-like computer operating system that's gone a bit nuttier-like, sort of like 2001 A Space Odyssey. Ish. Various baddies, or to give them their *Immercenary* names 'Rithms', will try and deplete your defence, offence and agility attributes

which can be replenished by reaching various colour-coded healing spires. Where your FMV 'bits' come in is between missions you can refer back to the lab, where

your comrades will give you advice, or if you've done crap just look at you disdainfully. You also get clues and info from the inhabitants of the

Garden on Perfect 1, which gives *Immercenary* its tactical, adventure-like edge. It all sounds a little bit on the weird side to us.

▲ Who says originality is dead? Well, we do most of the time. *Immercenary* looks like being something a bit different, though.

I CAN SEE FOR MILES AND MILES

Electronic Arts has managed to sign up a new creative programming team over in the States who are the talents behind *Immercenary*. They go by the name of Five Miles Out. Five miles from where we don't know, but probably Little Rock, Arkansas as that's where they're from, and an ingenious lot they are because they handled all the production of the game, including all these dead-professional looking video bits. Who needs Dennis Hopper and Grace Jones, eh?

SCENARIO

▲ This blurry screen means that you're dead.

▲ No great 3D0 explosions here I'm afraid.

▲ The 3D bits are a cross between *Helicab*, *Doom* (again) and *Operation Wolf*. It looks like being rather good.

▲ Please observe the yellow maypole-like structures, and strange people who live in boxes.

▲ It may be a Perfect world, but see how the locals like it when you start shooting them.

▼ Die! Die horribly strange green thing.

JACK IT UP

Before you get chance to jack into the virtual world you of course get this complimentary, slick full motion video bit telling you about the armageddon that will follow if you don't work out how to sort out things in The Garden (virtual world-type place). I believe some weeding needs doing.

The best graphic adventure's aren't all American. Adventure Soft gives you the chance to split your sides over some British humour in *Simon the Sorcerer II*.

Simon the Sorcerer was one of the surprise hits of 1993 — a British, comedy graphic adventure which could teach LucasArts a thing or two about humour. The game followed the exploits of a young boy called Simon who, on his twelfth birthday, is whisked away to a fantasy realm where the Three Billy Goats Gruff, Repulser the pig, some talking wood-worms and the wicked wizard Sordid all make it difficult for Simon to find his way home.

Well, the good news is Simon's back. The bad news is Sordid's back as well. This time Simon has been tricked into coming to Sordid's world in a magic wardrobe and

unfortunately he can't get back again unless he finds some Mucusade to refuel the wardrobe. His search takes him to all sorts of strange locations: a pirate ship, a fast food restaurant, a magic competition and even the Three Bears' cottage. Yes, Simon II is even wackier than the original, and looks to be just as much fun.

▲ It might be a PC game but it's not politically correct — it makes fun of the 'differently sane' (ie loonies). And why not? Simon has to cover himself in porridge to join the loonies' society — but is he a match for fish man, straight-jacket man and the rest?

Simon II is a big game, with over 80 locations, more than 100 characters and truckloads of tricky puzzles. Everything has been improved: the graphics and animation are more detailed, the music is superb and the first game's old LucasArts-style interface has been replaced

by a new icon-driven system.

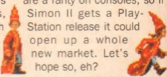

Red Dwarf fans will be pleased to hear Chris Barrie is back providing the voice of Simon on the CD-ROM version, and Spitting Image's Roger Blake will be playing many of the other colourful characters.

Judging by the success of Simon I, which did well in Britain and Europe, Simon II is bound to be a big hit. The

gorgeous graphics, fiendish puzzles and excellent

music go together to make what could well be one of the very best adventures of 1995.

If all goes well, Simon II will be released on PC/PC CD-ROM in April, with CD32 and Amiga 1200 versions following in May. There's also the possibility of a PlayStation version, but that depends on whether Adventure Soft manages to invest £30,000 in the developers' kit. Adventures are a rarity on consoles, so if Simon II gets a PlayStation release it could open up a whole new market. Let's hope so, eh?

SIMON THE SORCERER II:

THE LION, THE WIZARD AND THE WARDROBE

▲ Simon is going to have to get round those man-eating plants. Don't they remind you of the plant in Little Shop of Horrors, though?

▲ Shades of Monkey Island here: Simon gets press-ganged and ends up prisoner on a pirate ship.

Somebody's going to wind up in the stocks, and you better hope it isn't you.

▲ One of Simon's many tasks is to win a magic competition. Not being a very good wizard, he'll have to resort to cheating to get what he wants.

Although *Simon II* has roughly the same number of locations as *Simon I*, the locations are much bigger. Most of the locations scroll, and the biggest are three screens wide. Many of the screens also contain animated objects, making them far more detailed than the backgrounds seen in the original game. These woods are just one of the many places you can visit, though as you can see the characters haven't been added yet.

HE'S A RUNT

Simon's back with a new trendy image, but he still has Sordid and Runt to contend with.

Runt is caught reading by his dad, who doesn't think much of such intellectual pursuits.

The book is Sordid's old spell book, and by burning it Runt's dad has summoned the evil sorcerer. Whoops!

Sordid rewards Runt by making him his apprentice. Runt's first job is to locate Simon and bring him to Sordid.

Once he's found young Simon, Runt conjures up a magic wardrobe to bring him back to Sordid's tower.

Simon has grown up since the first game, he's still just as nosy though, as he nips into the closet.

A miscalculation on Runt's part, means Simon appears outside Calypso's magic emporium.

VIRTUAL POOL

Who needs to go down your local for a game of pool when you can enter Interplay's virtual pool world...

The first decent game to fit itself rather nicely into what we call the 'snooker sim genre' is without a doubt Jimmy White's Whirlwind Snooker, programmed by Archer Maclean. And Archer's Ferrari is testament to the fact that game sold by the articulated truckload. What made it so bloody good was that it was so realistic, and that it had some great little quirks, like when you took far too long on your shots the reds turned round and pulled faces at you.

No doubt Interplay would be as chuffed as Mr Punch if Virtual Pool does as well as Mr Maclean's Snooker and subsequent Pool game. It is pool (and not the more Anglicised snooker) that is the subject of this preview. What is so cool about Virtual Pool though has to be the control method: when you take a shot you simply hit 'S' and your mouse becomes a 'virtual' cue, and shots are taken by dragging the mouse across your mat. Obviously the further you drag your mouse back the harder you can hit the cue ball. It's this method which makes VP (as we are now dubbing it here in the CVG office) such a 'realistic' experience, and we can't wait until we get the full version in (and some beers).

Now, I do not believe you want to hit it in that direction

THEME PARK

As theme parks go Bullfrog's venture into the genre appears to be far more of a success than EuroDisney, so look out console owners, you're about to go to the fair...

Peter Molyneux, head cheese at game designers Bullfrog, first had the idea to launch a game like Theme Park 10 years ago. The problem was that the idea was for a business sim didn't seem like something the Jet Set Willyers of the world would be into. Obviously everyone thought "Yawn City", but when after Peter had come up with the likes of Populous and the cyber-style Syndicate there was a new angle on the biz sim idea, and it came to fruition in the guise of Theme Park.

There's probably not many gamers out there who haven't heard of Theme Park on PC (and the 3DO version was reviewed last ish), it's been mega successful, and the gameplay consists of you doing your utmost to set up a theme park, and trying to make it grow and grow. So you start

off with a few rides but you could end up with dozens. Obviously, with it being a Bullfrog game it's not quite as simple as that, there are wage negotiations to deal with, and punters to keep happy, for example if they're not fed they'll get hungry and miserable, but if you put an

ice cream kiosk right next to the big dipper then everyone's going to end up chundering all over the place. It's all very cause and effect. The Mega Drive and SNES versions are virtually ready and you'll find the reviews next ish.

SNES

MEGA DRIVE

▲ Let's hope they don't start saying hi-de-hi etc.

SO, WHAT'S NEW?

What Bullfrog has been doing since the PC version is thinking up some improvements for the console versions, like getting rid of some of the crappier rides and putting in a couple of extra ones. Bullfrog has also got rid of the icon panel at the bottom of the screen, now you just access it as and when you need it. Also wherever you decide to locate your park will affect the way it looks, so in hot countries there will be desert-like scenery or dudes walking around in sunglasses and in cold Scandinavian ones there'll be snow on the ground and depressed teenagers.

Learn how to fly very quickly indeed and jump into the slipstream...

SLIPSTREAM

Now, before I had enough cash in my Abbey Bradford and Halifax Junior account to pay for my first car (a mini, which overheated lots), the only way I could get round town when I couldn't borrow Shank's pony was on my push bike. And it was on my 15-gear silver Raleigh racer that I learnt that if I caught up with the number 65 bus of a morning, I could 'slip' into its 'slipstream' and get a nice red tick in the register as opposed to a big black 'L' mark.

Unfortunately (for me that is; nostalgic reasons you understand) Gremlin's new PC racing game is not based

▲ We're not keen on the colours in this screen shot though.

on the 65 bus, but is instead based around 10 incredibly agile 'slipstreaming' flying craft. These 'Slipstreamers' are capable of flying at speeds of well over 350mph, which is considerably faster than London Transport's fastest, even when the bus lane is completely clear, which of course it never is.

What's probably going to make this game is its two player mode (or four player

network option), and the rather stunning locations round the world that you can race over, from the Grand Canyon to the cityscapes of Tokyo and London. It's not just a racing game though, as you'll be able to customise your craft with a whole bunch of weapons and armour, and hopefully the full review version will be nipping into out slipstream next ish. Unless it runs out of gas.

▲ The artwork for Slipstream is fairly stylised and that's probably because it's been drawn by 2000AD artist Kev Walker.

▲ Fly through the Grand Canyon, and save yourself the cost of the air fare.

▲ Smoothly rendered.

▲ Spot FX explosions like these will occur if you're crap at games.

▲ These craft look reminiscent of Angel Interceptors in Captain Scarlet.

Early testing of the Channel Tunnel express link. Except the vehicle in this pic's moving.

GRATUITOUS BOSOMS ANY

Software houses cottoned on long ago to the fact that games tend to be played by the male of the species, and Gremlin is continuing the tradition with the likes of Vitoria Venice and Kin and Gin, obviously wearing full pilot's gear, natch.

◀ Many of the players look suspiciously like Peter Shilton.

ACTION

Has the PC been left behind with arcade football games, Ubi Soft doesn't seem to think so...

Currently, if you're a PC owner who wants a purely action-lead football game you've got a choice of either Sensible Soccer or FIFA. Both great games, but what do you do if you're not a fan?

Action Soccer is purely what the name suggests. Rather than get bogged down with a huge amount of tactics, it strikes straight for the jugular and delivers an action-packed half-volley net buster which looks like scoring with every PC-owning footy fan in the country.

The action can be viewed either side on or in a three-quarter perspective like FIFA. Unlike EA's creation, Action Soccer gives you more of a passing game and more control over your players. To get around the PC's sad two-button joysticks, the programmers have devised a neat system where precise timing, the position of the ball and dou-

ble-taps on the fire-buttons dictate the type of shot you're about to unleash.

The graphics are large, well-defined and nicely animated. However this exacts a pretty high price on the processor, so it looks like being a game for anyone with a 483 33Mhz or over. One of the things that will really make this game great is the sound. FIFA CD may have had John Motson, but Action Soccer's got Jonathan Pearce, who could well have old Motter's in a fight. We reckon. He provides the commentary whenever there's an on-pitch incident, while the superb crowd samples go into overdrive in the background.

Action Soccer looks like leaving the competition standing. Well know for sure next month when we get our hands on the review copy, so make sure you've got your ticket and have your pies and Bovril handy.

SPOON, SLICE OR SCORE

Unlike many football games where missing is simply a case of not having put the right amount of aftertouch on, in Action Soccer if you miss time a shot it's spooned well and truly in the crowd. However, get it right and you could be in for a real net-buster.

▲ The camera view pulls back for throw-ins and goal kicks.

This looks like being the closest thing to Thunderhawk to hit the SNES - which is a very good thing. ▶

Right lads, X marks the spot and last one back loves Pauline Fowler. ▼

Any volunteers for a single-handed raid right into the middle of an invading army?

Now if there's one thing the SNES really doesn't have at the moment, it's a really decent helicopter game. It's not surprising really, since they're traditionally easy to cock-up. Gametek however, looks like it may have got things all worked out.

Naturally it's 3D and makes use of the SNES'

AIR CAVALRY

mode-7 hardware. It's set over three zones and throws every bit of helicopter-hostile enemy at you, from AA guns to naval frigates. To deal with these you've got a decent, but limited, supply of guided and unguided missiles, plus your trusty M61 cannon which comes with enough ammunition to wipe out half the Chinese army. Each zone has dozens of individual missions which, on the whole,

are simply based around your capacity to fly into the middle of an almighty ruck and wipe out the entire attacking army on your own. Sounds fair.

As well as being able to take on the armies of the world single-handed, you can also go cannon-to-cannon with a mate thanks to the split-screen two-player mode. Here you either team up to destroy the common enemy which, frankly, isn't half as much fun as the

other mode where the aim is to simply blow each other out of the sky.

This certainly had us hooked for quite a while - especially the two-player mode, and it looks like Gametek has a potential hit on its hands.

▼ Each stage has loads of missions.

▼ Player two buys it with a missile up the bottom.

LOOK MUM, A HELICOPTER

You're not limited to one helicopter in the game, oh no, there are four death-dealing whirly birds waiting for you in the hanger. They include a lightly armed, but agile scout 'copter and a huge megadeath dealing assault craft.

The split screen two-player mode is fantastic. You can either play against each other or as a team. ▶

Flee! Flee you fools, the Thargolds are back with bigger ships and they're coming straight for you...

There was no denying that Frontier, the follow-up to Elite, was a superb game. Yes, it did have plenty of faults, but the good points outweighed the bad. So just imagine what the follow-up's going to be like, as programming David Braben has heeded the advice of Frontier players the continent over to make all the right moves for the sequel.

The basic game engine is pretty similar although, thankfully, combat has been made much easier. There's not going to be any of that trying to shoot in one direction while flying at half light speed the other way malarkey; this is what made for some frustrating moments first time around. To make things even more straightforward, one of the new gadgets you can buy for your ship is a combat computer. It works in a similar way to the scanner, but makes it easier for you to pin-point the position of other ships. The planets have also been made more detailed, with chasms and valleys to spice up dogfights and plenty of ground installations to trash.

The plot's also been improved. Instead of endless embarking on random mis-

sions, a constant storyline runs throughout. It's still a similar power-struggle backdrop, but this time there are several definite outcomes depending on what jobs you undertake and how well you did them. And in the middle of it all are the original villains from Elite — the Thargolds. As to whether you can buy a Thargold ship, Braben won't say.

If the original Frontier's success was anything to go on, and if people are convinced by the changes in this version, Braben and co could find themselves sitting pretty for a long time to come.

Cor! New, improved, even larger space stations that are still impervious to lasers and missiles ▶

▲ One of the many new ships you'll be able to pilot in Frontier 2: hard-looking, isn't it?

▲ The control system has been made more user-friendly this time round — which takes care of one of the main complaints about the first game.

▲ More of the combat takes place on planets, so you've some backdrops to look at.

FRONTIER 2: FIRST ENCOUNTERS

Plenty of even harder weapons are up for grabs this time around.

▲ The texture mapping on the Amiga version is up to the same standard as the PC's. Needless to say you'll need at least an A1200 to run it on.

WHOLE NEW WORLDS

To bring a new dimension to dogfighting, Braben has improved the scenery on the planets, so you can now fight across the surface or practice your skills by seeing how close you can get to mountains in true Spanish pilot style. And there are plenty of new ships and weapons to choose from — sounds ace.

Part man, another part man, all cop, that's Judge Dredd.

The producers of One Foot in the Grave probably thought they were being really clever making a series about a grumpy pensioner, but sadly they'd been beaten to it some years before by 2000AD comic. Surely the world's most thoroughly miserable old bloke must be that bastion of law and order Judge Dredd, played somewhat implausibly we'd of thought by Sylvester Stallone in the forthcoming movie of his adventures. Now comes your chance to grab a slice of petty-manded vexation with the official game of the film.

We'd love to tell you what the plot is, but to be perfectly honest we haven't a clue what it's about, except that it's got something to do with some perps and judges and there's quite a bit of shooting. And the judges ride these cool bikes, and they've got one of them in the window of Planet Hollywood, but it looks really cheap and plasticky up close. The game, however, we're a bit

better on. It's a platform shoot-'em-up in which you stalk the streets of Mega City One in an effort to reduce crime by shooting everyone you see. The graphics certainly look very nice already, but we're not telling how well it plays. Not until next month, anyway.

This looks somewhat thrilling, does it not? Dunno what's going on, though. ▶

judge dredd

FREEZE, LUVVIE!

The Judge Dredd movie has been in production hell for about five years now. The project was first announced with Sylvester Stallone cast in the lead role, but he dropped out before shooting started. A succession of other un-famous actors were linked with the flick before Stallone repented and reprised the leather kecks of Dredd - under the condition he was allowed to take his helmet off indoors (which, of course, Dredd never does ever). A year down the line and presto, Judge Dredd is ready for the big screen. Having seen some clips we can say, hand on heart, that it looks ace. As to whether the plot will be up to scratch is still anyone's guess, however.

▲ I just said, "Off you go Dredd, it's an early shower for you", and he went mad.

▲ An evil CS attempts to exact bloody revenge for the rejection of humanity.

▲ Judge Dredd often, as a part of his work, finds himself in dangerous situations. Here is one as an example. Looks mighty perilous.

▲ Hey everyone, look at me! Look, I'm swinging like a monkey! Look! Hey, look!

▲ Not even the Statue of Liberty is above the law.

▲ All your favourite 2000AD characters called Joe Dredd make an appearance.

▲ JD pops down to Hell for a spot of demon-bashing. Or it might be a steelworks.

It's the attack of the isometric-perspective shoot-'em-ups on a Nintendo format that you own soon (ish)...

The world is not a safe place to be. Just when you think you've saved it from one tinpot, reactionary, zealot dictator along comes another one to plague your peace. Such is the case in the sequel to the highly acclaimed *Desert Strike*, but this time the prefix is 'Jungle', as any Mega Drive owner will no doubt tell you. The first game in the series (the Mega Drive is now up to the third *Strike*: *Urban*) had you pitting your wits and military hardware against General Kilbaba the Desert Madman, but now it's his son Kilbaba the Younger who's after revenge for the death of his da'. Unlike his dad he doesn't look like Saddam Hussien. No, this one looks like Colonel Gadaffi, so it looks as though the international terrorists are breeding with each other - yeuk.

The two Nintendo Jungles aren't vastly different to the other versions, although the control on the Game Boy version is still a bit rusty. The SNES game, however, is looking very smooth and the intro is almost 3D0 calibre. Each game has a healthy quota of action (GB has nine campaigns with between six and eight missions in each; SNES eight campaigns and over 30 missions to complete) and with you taking control of a Commanche 'copter, a stealth bomber, assault motorcycle and an attack hovercraft.

This *Strike* game looks like it's going to make Nintendo, Ocean and Gremlin a lot of money. Probably. Even if it doesn't, who's going to bet against there being Nintendo versions of *Urban Strike* before the year's out?

It's a bloody mess! At least it will be once you've trashed the planet with your ultra-hard posse of cyborgs...

Although it's now a couple of years old, Syndicate is still well up there as one of the finest, and most violent, strategy games ever released. The concept, like the game itself, is very simple. Guide up to four armed cyborgs through 50 enemy strongholds, blasting anyone who gets in your way with a jolly selection of large guns and bombs.

It's not just this violence that makes the game playable – although there's no denying that's a big plus. But it's also the simplicity and inventiveness of the missions. Later on in the game you have to rely on using weapons left behind by dead enemies to arm your cyborgs, since there's no way on Earth you can carry enough ammo to last. Encounters with enemy cyborgs are also unavoidable, so any spare cash you have has to be ploughed into research and development to make sure your lads have state-of-the-art weapons.

Don't expect many changes from PC Syndicate

in this version, mainly because the game doesn't really need them. However, Bullfrog is promising loads of excellent new gimmicks, weapons and inventive ways of inflicting computer death on people in Syndicate 2, which is due later in the year.

▲ I'm leaning on a lamppost at the corner of the street. Dumdy, dum, dum, meet.

▲ Look! Rendered graphics. Woo.

▲ Your aim is simply to take over the world. There, not too tough really.

▲ Remember to kit your cyborgs out with topper weapons before you send them into the battle zone.

Three against one – now those are real odds. As long as your blokes have the biggest guns, that is. ▶

▲ I shall destroy you all with my special red-light torch-boy ring.

▲ Mrs Gobi spontaneously combusted as the Cyborg milkmen called round to collect this week's money.

SYNDICATE

BANG TANGO

In the process of causing maximum death to enemy cyborgs/coppers/hapless civilians, things do tend to get quite violent, not least because the fun weapons such as the rocket launchers cause whacking big explosions. The buildings can't be damaged, which is a shame, but that's something that you will be able to do in Syndicate 2.

MEGA-CD

■ **Unconfirmed**
 ■ **Beat-'em-up**
 ■ **Sega**

■ **Programmed by Sega** ■ **Initiated November 1993**
 ■ **95% complete** ■ **No other versions planned**
 ■ **Mega Drive version available** ■ **Estimated release April/May**

When I was a kid they used to advertise cool boardgames on the telly, ones that lit up or had groaning castles on them and things. But now it's all Sega stuff.

The observant among you may remember Eternal Champions from a year or so back. It was Sega's big attempt to out-Street Fighter Street Fighter and featured a large cast of characters, each plucked from a different point of the past, present or future by the eponymous Eternal Champion. Sadly, despite being a

fine game, it failed to set the charts alight. Boo hoo.

But weep not, Sega fans, for all your favourite Eternal Champions champions, and some of their new pals, are set to make a re-appearance pretty funky darn fine soon. This is all thanks to the Mega-CD which has given the programmers the scope to include an incredible nine secret characters, hordes of new moves and some especially sexy-looking FMValties.

The basic gameplay remains virtually unchanged, apart from the huge injection of Mortal Kombat-alike extras. Can the humble

Mega-CD take another beat-'em-up of this type? Can Eternal Champions fare better this time around? Can you pinch more than an inch? The answers to all these exciting questions, except the last one, are coming soon to a CVG near you. Don't touch that dial now, y'hear?

▲ **Along with the FMV sequences, there are regular in-game kills too: fatalities, sudden deaths and overkills.**

▲ **The training mode found in the cart version seems to have been axed.**

Blood and gore fans have nothing to fear - there's plenty of both.

ETERNAL CHAMPIONS CD

▲ **A fight is never far away in Eternal Champions - and we're not bally well kidding.**

NEW LOOK, SAME GREAT TASTE

It's all change over at Eternal Championsville. Not only do a bunch of new non-hidden player characters make their motley presences felt, but all the old favourites get a facelift too. New costumes would appear to be the order of the day for some, while the full special moves makeover is applied to others. Needless to say even Eternal Champions owners should be at least a bit interested in the update.

DIRT RACER

▲ The two-player mode promises to be far friendlier than Stunt Race's.

◀ Dirty tactics - yes! That's what we want.

FRANK'S CAR LOT

Alright my son. 'Ows abhaat a new motah? Yeah, 'ats right. I got these free 'ere. One careful owner, know what I mean? And she was a nun, right? Howsa abhaat you take a butchers then? Sweet, sorted and, indeed, pukka you old lake.

BUGGY

Light, tough to steer, but goes real fast. Perfect for country roads.

JEEP

Good all-round. But won't earn you the best times.

MONSTER TRUCK

Big, slow and well 'ard. Handy for the stunt tracks.

▲ Oh-oh. That's a bit more than just a scratch on the paintwork. Dad most certainly will not be pleased.

Can Elite's new FX polygon racer do for the Super Nintendo what Stunt Race FX couldn't. CVG takes to the track...

It doesn't take a genius to spot a certain similarity between this and Nintendo's Stunt Race FX. That's partly because DIRT Racer is powered by an SFX chip, the same type as in the Nintendo game, and though the SNES is a great piece of kit, it is a little limited when it comes to producing complex polygon-based objects such as the cars in Stunt Race FX.

Elite is aware of similarities between the games, and has included plenty of features to set the game apart. For one, you're not racing on a narrow track. Because this is an off-road game you're at liberty to take your motor for

a little jaunt through the countryside as you try to track down short cuts or ways past the other driver. Elite has also tried to spice the normals up a bit, instead of normal first-across-the-line courses. Each stage features

▲ Come in number two, your time is up.

a stunt track packed with difficult turns and hills. There's a puzzle course where it's up to you to work out which order to clear the check-points in before your opponent does. Better than Stunt Race FX? Find out next month.

▲ The big truck was our personal fave motor in the preview version we played.

▲ Alaska is the most challenging location in the game.

The motors in the game can withstand a small amount of damage before exploding. ▶

This is your desert track. Looks a bit deserted doesn't it. (Sorry - Ed.) ▼

One careful owner, only 10,000 miles on the clock and the highest insurance ever. ◀

▲ Even driving the monster truck is no guarantee that you're not going to end up skidding on the ice.

ALL AROUND THE WORLD

The game features courses in Britain, Australia and Alaska. As you can imagine, the British tracks are fairly flat while the Alaskan ones have you sliding all over the place.

Ahh, the good old UK. Fairly tame, but great for beginners. Although you'd have thought there'd have been a few joyriders.

Here's where the men are sorted out from the boys. Whopping great hills and hair-pin bends make life tough to the extreme.

And here's where the rampaging mutant steel-wheel scum are sorted out from the men. The hardest set of tracks in the game.

in the bag

'All Aussies living in England should be sent back courtesy of Slowtugs Animal Freight UK'. Yes that's the sort of contentious issue we like to hear at CVG, so if you have an issue that's burning a hole in your pocket (though what it's doing in your pocket God only knows) write to us.

CHEAPSKATE

I am a bit upset about the price of games and accessories for consoles. Recently I purchased a Super Nintendo and all of a sudden the Saturn, Jaguar and 32X come out. I mean a Jaguar would set me back £199 plus the £50 or so for each game. I am sorry but not everyone can afford £50 plus for games.

Andrew Bell, Newcastle

CVG: Unfortunately, software doesn't come cheap any more, and although the hardware is relatively low in price (admittedly the new consoles are expensive, but the 16-bit machines are dirt cheap) the basic premise of Sega and Nintendo getting you to buy their machines is that they can then make money on the software, you dig? Plus the cost of making a game these days can run into millions, Ground Zero Texas and Wing Commander 3 for example, and this reflected in the final price. And OK you've just bought a SNES, but if you can't afford expensive games then at least there's a back catalogue of loads of great games at reasonable prices for that machine. So you can't afford a Jag, Saturn or PlayStation, I'm sorry but neither can a lot of people yet, but eventually when they're released over here they'll be a lot cheaper than on import, and unfortunately games are a luxury and they don't come cheap.

LETTER OF THE MONTH £20 PRIZE WINNER

COMPLETE NUTTER

I think I can predict the outcome of the front cover of issue 159. When plain polygon Lau comes in to attack Toh Shin Den's wonderfully textured Eiji, Eiji will simply sidestep to the left (a move which Lau is not capable of performing) and smack Lau in the ribs. Consequently Lau will fall on his knees and give Eiji ample time to finish him off by decapitating Lau with his sword. Lau's dismembered body would then fall to the ground and gush out polygonised blood, but only a couple of polygons, because the Saturn can't handle too many!

Frank Wiseman, Ayr

CVG: We take it you're a PlayStation fan.

NEO GEO CD MOANS

It really angers me to see how late SNK has left it before finally releasing a machine with reasonably affordable software. Its timing is pathetic, Mr Blobby could have done it quicker. If the Neo Geo CD had been created a couple of years ago SNK would be the giants of the British game industry by now, while Sega and Nintendo would be struggling for survival. With its GENUINE arcade-quality graphics and sound it would have been a massive hit. As it stands today, no matter how successful the Neo Geo CD is, SNK will find it impossible to overtake Sega and Nintendo's domination of the videogames market.

K Murray, Riverside, Glasgow

CVG: Even today the Neo Geo is still something of a technical masterpiece, but its problems lie in the chronic lack of variety of its software. Even if the games had always been available on CD instead of massive carts we doubt whether there'd be any more punters willing to shell out for endless beat-'em-ups. Plus SNK's best titles have been successfully ported over to other formats which offer a greater variety of software.

J MORRIS IS A PRAT 1

After reading Mrs J. Morris' letter in issue 159 I felt that I had to reply to her comments. I realise that she may not actually read this letter if it's printed, because she's obviously way above the likes of CVG readers. But why do these people just go on pushing their prehistoric views on to us. If we the readers didn't enjoy reading your magazine we would not buy it. As for her mentioning the glorification of pornography and violence, what a load of tosh. I think she must be reading the wrong magazine. The computer magazines are on the bottom shelves, not the top.

I feel very sorry for her son. It must be very boring reading walking magazines and playing games designed for the under threes all day. I will not prevent my daughter from using game systems, I was rather she was in her room playing Doom, blowing people away gratuitously, than out in the street, where anything can happen. Most children go into crime because they have nothing better to do with their time. Is this what she really wants from her son. I realise that these are my views, but I am sure that they are the feelings of most games players, who are always told that there's too much violence in games. This is rubbish, after all it is only a game. What about the violence on the news everyday, and this is shown throughout the day so anybody can watch it. People like Mrs Morris are the reason that censorship in the UK has been pushed to ridiculous standards. Thank you for spoiling it for everyone else. To Mrs Morris, on behalf of video gamers all over the country, get stuffed and keep your views to yourself, ya miserable old mare.

Christopher Stevens, Cheltenham Gloms

BLACK BEAUTY

I'd just like to say that Sony's black CDs for the PlayStation are seriously wicked and whoever thought of the idea should automatically win the lottery. Is there any other reason for them being black though? See ya!

D Easington, E-Mail

CVG: It's supposed to help Sony clamp down on piracy as only a few manufacturers make the black CDs. But we have to hand it to Sony, the CDs are cooler a '50s teen icon on the bleakest winter's day in Iceland.

UPGRADE CHAT

I got my first games machine aged eight (C64) and in the last six years I've upgraded to a Mega Drive, and three years ago to a SNES. The Mega Drive and SNES are good machines, but of late I've become bored of them and I'm thinking of upgrading again to a more powerful console. Of the 3DO, Saturn, CD32, PlayStation and Ultra 64 I feel the last two machines will be the major success stories. After seeing Gale Racer on the Saturn it has put me off the machine. The PlayStation looks good though, especially with games like Super Formation Soccer and Ridge Racer being released for it when it arrives officially.

The Ultra 64 looks cool too. Killer Instinct is a masterpiece and if the employees at Nintendo can work their butts off to produce games like

that then the Ultra 64 could well be the clear winner. I guess what I want to know is what will be THE machine to buy.

James Stenberg, Ireland

CVG: Don't we all mate, there's nothing like splashing out a load of cash on something electrical only to find that it ends up being about as well supported as Stockport County FC's B team. We wouldn't be afraid to buy a load of shares in PlayStation PLC (if it existed that is), and deservedly so, the machine is beautifully put together and already has a couple of killer games in the shape of Ridge Racer and Toh Shin Den. Imagine what the games will be like in a couple of years! Yeh, the Ultra 64 should be a winner too, but as we keep on saying it's difficult to say without having seen the final prod-

J MORRIS IS A PRAT 2

I can't believe Mrs Morris nicked her son's CVG saying it would make him abnormal. This is going too far and I think she should have a good look at her past to see what has made her so abnormal. So much for her so called facts. She even admits at the end that they are not facts anyway. Let's go over to her comments and make them truthful:

FACT: Video games give pleasure to millions by showing violence (among many other things) who most or all (such as myself) would never dream of hurting anyone in any way.

FACT: Video games show sexy women in order to provide entertainment. These games are made by boys for boys. Male game designers are not going to show lots of sexy men in their games. There would be more girl-oriented games if there were not so few female game designers.

FACT: Video games increase intelligence, hand-eye co-ordination, puzzle-solving abilities, reflexes, memory etc.

FACT: Watching video games can sometimes trigger a fit if the clear guidelines are not followed, but then again so can watching TV, or even when doing practically nothing.

FACT: Video games can increase your social standing, which has been proven by extensive studies, because it gives children more to relate to each other about, and it creates the want for friendship. I for one have a friend who I would not have if it was not for computer games.

Mrs Morris is an utter moron and one of the most idiotic people I have ever come across. To even suggest that parents would be saving their kids by taking computer games away is the most unbelievable piece of crap I have ever heard. Words can not describe you Mrs Morris.

James Hopkins, Tenby, Dyfed.

CVG: FACT: FACT! We must concur on your final point. Because FACT, we've made loads of friends since all moving to London to work on a games mag. Just think, if it hadn't have been for Sonic we'd all be lonely and depressed right now. And that's a big fat FACT!

J MORRIS IS A PRAT 3

What doctor let Mrs Morris out, eh? It's people like this who are butchering the action and horror movies on TV, video and at the cinema. Mrs Morris please crawl back under your rock and stop spreading bad press and insulting not only every game in the world but one of the best magazines in Britain. Most of us are fairly intelligent and open minded and I feel most people with Mrs Morris' attitude are frightened of new technology and just have a bad case of the technofear.

Mark Hogg, Derby

CVG: Wow! Thanks for all the angry responses we had to Mrs Morris' views as printed in Issue 159. Unfortunately we couldn't fit them all in and even those that did make it had to be cut because they were slagging off Mrs Morris so much! Is anyone out there brave/stupid enough to agree with the views of Mrs Morris? Or perhaps someone out there has a different subject that'll stir up a bit of controversy as we just know these J Morris is a... letters are going to keep coming for months.

uct. Oh, and don't write the Saturn off just because of Gale Racer (Motor Toon on PlayStation wasn't exactly great either) as Daytona looks like it could a dream racer.

If you haven't guessed all ready, Dark Forces is superb. You may also have noticed the large amount of PC software this month – that's where most people are headed at the moment. It's simply because a lot of companies are planning PC to Saturn/PSX conversions, so don't be surprised if some of the PC software you're seeing now appears on console at Christmas. Still, with 16-bit titles like X-Men 2 and Air Cavalry, there should be enough stuff on the way to tide you over the summer months – or until you win the lottery and buy a 32-bit machine.

Mark Patterson

What we're playing this month

MARK

■ **Dark Forces/PC**
Having had a crap Mark Hamill hair-cut a few years back, I suppose it makes sense for me to like this. It's bloody good regardless of what any other mags

might say.

■ **Raiden/PSX**
One of the most explosion-thirsty shoot-'em-ups in history and a refreshing change from the waves of bland half-finished polygon games on PSX.

■ **Stone, Paper, Kalachas/3DO**
Low on game, high on undressing is the best way to describe this bizarre amalgamation of pizzaro contest and pervy.

GARY

■ **Return Fire/3DO**
A superb mix of arcade and strategy elements which allowed me to indulge in my strange unattracting cravings for death and mass destruction. And

Return Fire p.84

Dark Forces p.58

you can run people over in tanks and armoured vehicles.

■ **Factor/3MD**
The big-nosed, garlic-eating, vloo-swilling, peddle bike-riding, heret-wearing, foul-breathed wrong side of the road-driving hero makes an almost welcome return. But not quite. A damn fine game though – even if it is a bit, you know, French-like. They have good food though, but they can't make a decent pizza.

■ **X-Men/Arcade**
At last, Capcom releases a new one-on-one beat-'em-up, and it might as well be

Streetfighter 3. Completely thrilling, homes. Capcom will have to go a long way to top this.

RAD

■ **X-Men/Arcade**
Probably my favourite game of the month. Packed with ludicrous special moves and sporting toply smartness graphics.

Hopefully this will set the pace for future beat-'em-ups – especially Streetfighter 3 which could end up being a massive white elephant.

■ **X-Men 2/MD**
Well, alright, perhaps I am a bit of an anal X-tite bore, but this really is a dead good game, honest. No, really. And I've got all the comics too.

■ **Beavis and Butt-head/MD**
The game might be a bit crap, but you can't deny that it's funny. And you've got to laugh, incha? Especially being a bit of a reformed rocker and still young enough to be a 'yof' it sort of appeals to my childish nature – which is most of it really.

Jungle Strike p.75

X-Men/MD p.80

This month's hot-hits

Here at CVG we don't give high scores away lightly. A game has to be rather special before it scores 90% or over and a CVG Hit. Even rarer though is a CVG Gold (awarded to games that have pushed back the boundaries of gaming) but don't expect to see more than a few of these a year as it takes a score of over 96% to earn one. Anyway, here are the top games this month...

- 58 Dark Forces/PC
- 75 Jungle Strike/PC
- 78 X-Men/Arcade
- 80 X-Men/MD
- 84 Return Fire/3DO
- 86 Metal Marines/PC Windows
- 97 Sonic Drift 2/Game Gear

The big picture

If any other version of a game is available, then we'll tell you via our Alternatives and Other Versions boxes. We'll even tell you if it's destined for any other formats. For consistency's sake, games retain the original scores in alternative boxes.

■ PC CD-ROM

■ Shoot-'em-up ■ Virgin

■ £49.99 ■ Out Now

■ No other versions available

■ No other versions planned

Is this really just Doom with lasers, or has LucasArts managed to come up trumps yet again?

A Right, we're not going to kid you. In many ways this is a high-tech bloodless Doom in that it's 3D and you spend more time shooting than thinking. What really makes the difference in the action is having laser bolts whizzing through the air from all angles. In Doom the first you know of something appearing behind you is when it starts gouging huge lumps out of your back. Here it's when a pencil-thin laser bolt sings a sideburn and sets fire to the wall in front of you, preceded by you swearing loudly and reaching for the run button.

As expected, you play a mercenary who's (barely) on the side of the Rebel Alliance who, with the help of a few of his mates in the Empire, is out to make the galaxy a nicer place by rubbing out stormtroopers and nicking top-secret information and this is what helps make the game so good. Rather than just run around blindly blasting everything in sight, each mission has a number of objectives to complete, which normally include finding a certain item, assassinating or rescuing someone (depending on whether you like them or not) and saving your own backside.

The LucasArts 3D is noticeably more powerful than the one used in Doom. The graphics are clearer and, as in Origin's System Shock, you can look up and down as well as jump and crawl. This actually serves to complicate things at times, as you're often so busy fiddling around with the keyboard trying to look up and shoot something that you don't notice what's coming towards you.

dark forces

◀ Phasers to stun. Oh bugger, there isn't a stun setting - only certain death.

CUTTING EDGE

As the game is set between the Star Wars flicks, you obviously need to be kept up to speed on the latest goings on in the Empire - so plenty of cut-scenes are provided. It's this progressive storyline which really sets Dark Forces apart from other 3D action games. Here the scene is set in the production facility for the Emperor's new toys - dark stormtroopers. One of these blokes is worth a dozen rebel fighters, which makes them quite hard really.

▲ You start the game with a crappy little pistol. Easy on ammo, light on power.

EYE SPY

There are a few familiar, and some not so familiar, faces in the game. Mostly their appearances are solely in the cut-scenes, but there are a few guest appearances in the game itself – although we won't go and spoil things for you by giving away the game's secrets

▲ Tell me Desmond, how DO they go to the loo?

▲ As you can see, you have a healthy armoury.

▲ Oi, nutter. You might be in charge of an imperial bat-testation, but you cannot expect to get away with walking like that...

...told you. Now ► don't do it again.

Some of the stages feature massive drops which means certain death for cow-footed Rebel agents.

Look, up there! You can look down too.

SECOND OPINION

The Doom clones are coming thick and fast, but when LucasArts becomes involved in producing a Doom looky-likey I'm not one to complain. What I could complain about, though, is the lack of a network option (this multiplayer option made Doom rife from nine to five in many an office building). There's also a lack of blood and guts and not too many Star Wars references in later levels, but apart from these three whinges, it's great, believe it.

GARY LORD

The concussion gun is just one of 10 neat weapons in the game.

Aln't that the bloke who fired that big laser on the DeathStar. I thought he'd died. Still, with your three-way gun he won't last long.

This is your mate who you've got to rescue in one of the missions.

VERDICT

PC CD-ROM

I could never imagine this turning out to be anything less than amazing. The action surpasses Doom for several reasons - you have better and more varied weapons, the sound effects are amazing and, naturally, Star Wars-heads like me love anything as long as there's a storm-trooper in it. The 17 levels are massive, varied and challenging, which explains why you're given three lives as well as generous amounts of energy and shields. Dark Forces is every bit as good as I hoped and is clearly the best Star Wars game yet.

HOW DO THEY DO THAT?

If you're one of the many people wondering just how the Stargate team produced those cool morphing effects, wonder no more. So long as you've got a PC CD-ROM, that is. A new product entitled *The Secrets of Stargate* is now available, featuring Quicktime movies illustrating the production of the film and the full unadulterated trailer for you to feast your eyes on. If you're not sure you're that interested and don't fancy spending lots of cash on the finished product you can find an abridged version on the cover of this month's PC Review.

▲ *Behindd yooooou! Oh yes it is! Oh no it isn't!*

Words cannot convey how cool the animation for Kurt's wobbling-along-the-balance-beam *Gladiators*-style skills are. ▶

▲ *An Egyptian God looks lonely. Poor chap.*

It's a star, it's a gate, it's a film... it's three wishes in one! It is possible!

Forget Mario and Street Fighter, Stargate beats all comers for the first translation of a video game to the big screen. A coin-op by the name of Stargate hit the arcades over ten years ago, and while it had nothing to do with Egypt, sand, pyramids or paedo-erotic costumers, it obviously inflamed the imaginations of several Hollywood types enough for it to hit the cinema more than ten years later. Well, you know what film production schedules are like, they're always putting things back and performing re-edits.

And now, a bit like with the proposed Street Fighter 3, the movie has been converted back into a different game by those mighty marvels at Probe. You play the part of Kurt Russell and his hair, running through the desert with a gun and limited supply of grenades on a mission to save his buddies (and the world). Along the road there are a number of sub-missions, such as collecting supplies for the starving alien/Egyptians, which aid your progress. At the end of the game lies a showdown with arch girlface Jaye Davidson, the outcome of which decides the fate of the world as we know it (except not in real life).

▲ *James Spader must die!*

▲ *This old man will try to sell you some dodgy carpeting. Kill him if you must.*

As you can see, it's all go down Stargate way, especially when there are things to be shot at. ▼

stargate

◀ Hopefully this picture should demonstrate just how throbbing with action *Stargate* is. Because it is, you know.

Having your knees chewed by large (and largely unidentifiable) creatures is a constant worry in *Stargate* realms. ▶

You know, ▶ they have beetles that big in Egypt. It's true, I saw it on telly.

▲ A cricket-loving Middle Eastern deity takes exception to Kurt's chin (which looks like a bum - ha ha).

◀ Kurt's gun isn't actually much use. You have to depend upon his supply of grenades most of the time.

▲ Each level features a number of sub-sections. Some are set in caves, some in buildings and others are set in other sorts of places.

This little screen here tells you your missions and how close to completing it you are, along with information about your possessions and general well-being. ▼

▲ You know, that happened to me just the other day. What a bummer.

VERDICT

SNES

There's not really anything original in *Stargate* at all, but that doesn't stop it being quite good fun. The graphics are pretty sharp, the action moves at a fair old lick and the level of challenge is balanced towards the higher end. However, it must be said that you probably already own *Stargate* under a variety of different names, and unless you're a real platform blaster addict this is unlikely to get the hormones blazing.

A KURT NOD

It's not an easy life as Kurt Russell. Your eyes are too close together, you've got a silly chin, and to top it all off you're being menaced by hordes of angry Egyptian gods and their giant beetle cohorts. Luckily, Russ (as we like to call him) is pretty sharp on his platform skills. He can run and jump as per usual in platformers, but he's also picked up a few Prince of Persia-type talents too. Pull down on the joystick and your little man lowers on to his haunches to stealthily inch forward on his knees or roll grenades across the ground to stop them bouncing away from enemies. Kurt can also hang from the lips of platforms, shimmy up and down ropes, walk into rooms and appear alongside Goldie Hawn in *Overboard* with a straight face.

The 32X has had a race, shoot and beat-'em-up, so what it needs now is a decent golf sim. Can Sega come up with the goods?

Does anyone remember the old Club biscuits, before they started selling them in singles and changed the packaging? Each of the wrappers had a little picture of the appropriate flavour (orange, generic 'fruit' etc) on the front, apart from two – plain ones had a playing card and milk chocolate ones had a golf ball emblazoned upon their packaging. Many was the hour spent by studious primary school kids, scrutinising their lunchboxes for some sort of hidden meaning to these pictures. Of course, the connection was, obviously with hindsight, the word club.

Pointless and banal as this whole exercise was, it still – to this day – seems far more worthwhile and appealing than a game of the sport of the biscuit (and car). But not this one. It's a tour of one famous golfer's favourite 36 holes in the world, each one an exact digitised replica of the real thing. Players have complete control over almost every aspect of their shots, which allows skilled gamers to produce some incredible drives and chips to show off to their friends. There's also a big enough selection of tournaments to sustain interest. So strap on those lurid slacks, offer a prayer to Golfan (God of Golf) and get ready to golf up, homestyle.

▲ This is one of the hardest shots in the game. You have to judge the wind just right or you're doomed.

▲ Sculpt your golf any way you like it with the character edit screen. And yes you can be girls, liberal fans.

JOIN THE CLUB (HA HA)

Golf's Greatest is played in much the same fashion as many Mega Drive conversions of the sport. Pick your stance, which affects the length or height of the ball. Then pick shot type (full hit, chip or putt) along with the club for the job. Now position the latitudinous shot cursor and press the button to take a swing. Once the shot has been initiated a power meter rises to the left and falls back to the right. At both points during this journey the player is required to stop the meter (via a button press) as near as possible to a line which denotes maximum hit potential. Now sit back and watch as your little spheroid heads holewards.

golf's greatest 36 holes starring fred couples

▲ That looks like a chip shot, if my knowledge of animations serves correctly.

▲ Obviously sand traps are a real hazard on this hole.

▲ This is Fred himself, having a bit of a chinwag before the game starts.

▲ If you're dead skill you can actually hit the ball between those two trees.

VERDICT

32X

Whilst *Golf's Greatest* doesn't exactly do anything original with the golf game format the implementation is certainly superior to just about any other title in the genre. There's a lot more to setting up a shot than just getting the power meter right and the variety of holes certainly makes a change from the regular greenery as well as providing a real challenge. Obviously, if you hate the sport this isn't going to change our mind, but golfing aficionados should rightly lap this one up; it's almost as good as PGA.

A futuristic, giant-duelling robots sim – how utterly original.

The war machines of the future, it would appear, will be giant bipedal death robots bristling with massive laser cannons and piloted by top-crack, battle-hardened elite troops. Which is a bit short-sighted, if you ask us. What you really want is a tiny, spherical flying thing piloted by remote control so no-one gets hurt. And it could have special, silent invisible guns which fire around corners and everything. They could call them Killex 2000s and the pilots would become known as Killjockeys in the cyber-slang of the future. That'd be ace.

Of course, though, things don't work like that in the wacky world of games, which is why in Battledrome you find yourself stalking a large arena engaged in single combat with another giant robot of similar stature. Every aspect of real-life giant robot fighting has been included, which means you need to use both hands to control the thrust, pitch and turret movement of your war machine. It also means there's more to the knack than many games of this ilk would have you believe, as you juggle the considerations of reconnaissance and not dying.

battledrome

◀ This is the negotiation screen where you argue about the game set-up with your opponent.

WOW, LIKE, CYBERCULTURE, MAN

If you're, like, a totally wired-up cyberhead you may appreciate the network-friendly set-up of Battledrome. This allows you to go face-to-face against a human challenger from any part of the world (providing you can afford the phone bill) and even has facilities to establish globe-spanning tournaments, with each player ranked or relegated as appropriate. Participants challenge each other, negotiate wagers and rules as usual and even have the option to send messages to one another (bet none of those are rude).

Buy equipment with these great equipment-buying sections. ▼

▲ The little radar thing also displays the movement of the mech contrasted with the direction in which the turret faces.

VERDICT

PC

The first thing you realise about Battledrome is that you need a very hi-spec PC to run it properly. The second is that while it all looks very complex in the instruction manual, getting the hang of the game isn't all that hard. The third, and possibly final, thing you notice is that if you haven't got a modem you're bugged, because one-on-one combat against faceless computer opponents loses its appeal quite rapidly, no matter how well it's dressed. Battledrome is a superb product, but only if you've got the kit.

21st Century has given us Dreams and Fantasies, now it looks set to top the Codie's excellent Psycho Pinball with its latest little metal ball sim...

Death wielding nutters, scantily clad foxes from Babesville and psychopathic bungee jumpers are just some of the delights that await you in the latest game from 21st Century. Sadly these aren't characters in the game but situations from the three pinball tables on offer. This is a game from 21st Century after all, a company who seems to have single handedly swamped the computer market with pinball sims. That isn't a bad thing though, as they've all been decent enough products. Thing is Pinball Fantasies, sequel to the original Pinball Dreams, didn't really offer anything new, just more tables. Doing that a third time would probably be pushing things a little so thankfully Illusions has a host of new features.

Most notably there's a multiball feature, a first for computer based sims, but of course beaten to the market overall by Codemasters' Psycho Pinball on the Mega Drive. A startling hi-res mode is also available which allows the player to see nearly all of the screen at once, although the downside is that there's fat, black borders along the sides of the screen. There's also a whole host of brilliant new mini games which the player is given the chance to play when they've hit certain targets in the right combination. Oh, and the tables are larger too. Whooh!

The bonus games take place in the LCD table at the top of the screen. And they're great! ▶

This is what a table looks like in hi-res mode. It's most useful when in multiball mode. Unfortunately you just have to put up with those big black stripes down the sides of the screen. ▼

asterix: the power of the gods

Sega has got some gall after the last Asterix game, but back to prove it has even more Gauls and in fact a decent platform game to boot...

Besides everyone's collection of Marvel (and the odd DC) comics piled in the bedroom when you were just entering teenhood was an additional pile of reading material, which contained the likes of Asterix, Obelix, Vitalstatistix and Big Brenda (whoops that last one was a different pile). These Gaulic adventures were only equaled in my mind by Herge's Adventures of Tin Tin, but Sega hasn't just released a game called Tin Tin and The Golden Crab, but Asterix and The Power of The Gods, which I am reliably informed is based on Asterix and The Chieftan's Shield.

This is essentially a platform romp, at first sight anyways, but what makes the game such a delight is that there are elements of other game genres: that is RPG, adventure and shoot-'em-up styles are mixed in to the non-linear approach that the game takes. Basically you, as either the little fella or Obelix, have to retrieve the chief's shield which those pesky Romans have roamed off with. It doesn't make a whole lot of difference who you choose, especially as the animation captures the humour and graphical style of the books perfectly. There are 20 different levels taking you as far a field as India and Egypt, but you don't have to start at the same point, you can wander via a main map into a number of locations. The adventure-style element comes into play in that you'll need to solve a puzzle or find a certain something before you can progress.

▲ It doesn't make too much difference as to whether you pick Asterix or Obelix as your main character.

JUST LIKE THE REAL THING

Capturing the graphical feel and humour of the tales of Asterix the Gaul is best displayed by the comic intro, the only thing that won't impress you though is the painful, diddy diddy dee classical music soundtrack.

▲ There are various stop points where you get advice.

▲ The non-linear nature of the game means you can start where you like.

▲ Power ups can be found in the treasure chests, and the crates are handy for reaching unreachable heights.

VERDICT

MEGA DRIVE

After the deluge of lovely, flash platform romps at the end of last year it's good to see something like Asterix come along. Why? Because it's something a bit diff' to the Sonic, Headdys and Ristars which are Sega's mainstays. There's a mixture of game-play styles which takes this from being a scrolling-platform-pick-up-power-ups-bash-baddies type a thing to a think about the puzzles and roam about for clues sort of game. Oh, and the graphics and characters are true to the originals. Oh, and get this... no, like I mean get this.

Arnie's no longer a guarantee of movie success, but was he ever that for video games, Acclaim's about to find out...

T rue Lies saw Arnie come back to his best on the big screen. It was old Arnie, corry one liners, big guns, huge explosions and lots and lots of foreign terrorists to kill. Then what? He goes and does Junior. Fool. At least we've got the True Lies game to make up for that abomination.

In fact, the game is just the violence from the movie, and bears little resemblance to anything else which transpired - which means that crappy love bit in the middle doesn't appear. What has happened though, is a shoot-'em-up which is more than a bit similar to Renegade's The Chaos Engine, ie a Commando-style blast with extra weapons and eight-way scrolling; and that's it really. Shoot a few terrorists, try to avoid killing honest, law-abiding American citizens who get in the way, grab a few extra ammo clips and repeat.

But shooting in anger is the name of the game, and that's it really. Not much thought, not much more than naked aggression. Sounds perfect. But it isn't. It looks like a classic example of a licence not only gone bad, but hitting skid row, drinking bottles of Thunderbird down in one and asking for 'any loose change, sir'.

PLAYING THE MOVIE

The problem software houses always seem to have with movie licences is actually making the connection between their game and the licence they spent so much money on. Acclaim has tried to tie the whole thing together with a couple of backdrops based on scenes from the flick, and some dodgy digitised pictures. Here's how they look...

**VERDICT****MEGA DRIVE**

Hmm, this is suspiciously identical to the SNES version in almost every way. The graphics are almost the same, so's the sound. In fact, I doubt if you could tell the versions apart. As a licence, well, it goes the same way as nearly all Arnie licences – down the tubes. Acclaim could have released the game with almost any title, it wouldn't make a blind bit of difference. True Lies isn't awful, but it wasn't the game we wanted to see, and it really just isn't that good compared to the standard of software we should see from Acclaim.

Simplicity is often the key to a good game, but it can also be the big, sweaty latrine from which some of the worst ideas come. True Lies falls somewhere in between. It's really a classic wasted licence. True Lies was a blockbuster movie which has turned out to be nothing more than a primitive shoot-'em-up videogame, with a few digitised film pics to flesh it out. Yes, I did enjoy it for a short while, but I didn't have to pay for it. You will, so you'd better think long and hard because there are better games you can spend your money on.

Could we be looking at MarioKart on the PC? It's a definite maybe...

Let's just get one thing straight - this isn't as good as MarioKart, there isn't much that is. What Manic Media has created is an all together more serious karting sim, which fits the PC's idiom perfectly. But is that what people want?

Who knows, certainly this is a very slick game. The 3D engine is powerful, fast and flexible enough to run even on slower 486s. This is partly because it rather cleverly adjusts the frame itself, rather than wait for the PC to get so tangled up with calculations that the whole thing starts running slower than a sloth through a cesspool. We do recommend though, that the feeblest machine you try this on is a 33Mhz with 8-meg, because if the frame-rate drops too far it's like watching a zoetrope version of the game.

The gameplay itself is dead simple. Bomb round the tracks, collect cash on the way, spend it souping-up your kart, then bomb around the next track. It's hardly revolutionary, but it's the multi-player mode that makes it a winner. Sad loners with no friends can challenge the game over its numerous courses which feature in the league mode, and are damn tough when you set the game to hard mode. And there are loads of short-cuts to discover, although when you first find them you spend so much time learning the route through that you normally end up last.

If you've got access to just the one machine there's a two-player split screen mode, but if you're in the office the eight-player network game is a brilliant way to squander several days and send your business well and truly down the toilet.

◀ Getting a good start is all-important.

REVVING UP

The 3D engine which lies at the heart of SuperKarts isn't the most detailed ever, however it makes up for that with the excellent sensation of speed it gives and the near-infinite number of camera views. Here's how the average race pans out - if you've got someone handy to keep swatting the F-keys to change the camera view.

jungle strike

This is Jungle Strike, pure and simple, and beautifully created (or should we say converted) for the PC. Which is somewhat of a contradiction because Jungle Strike, with its tale of evil desert madman, Kilbaba Jnr, taking on the good ole US of A, is very un-PC. That's not stopped Gremlin however, taking EA's original Mega Drive game engine and creating what resembles a cracking conversion of the isometric, 3D shooter.

The principal craft you take control of in Jungle Strike is a storming Commanche 'copter, and to control it (or the hovercraft, stealth fighter or motorbike) simply use the keyboard or joystick to manoeuvre your craft. The good thing about Jungle Strike is that the helicopter (et al) is PDQ and when armoured vans, trucks and HARVs are in the area, you can usually dodge cannons and missiles once you've mastered the control method.

The Strike series is very playable, and the PC is no exception, and as you complete each section of a mission you become more adept and eager at facing the next lot of guns and terrorists. Luckily there are passwords at the end of each campaign, and always check out the menus for your fuel and ammo stats, and only collect it when you really need it and you should be able to stop the Desert Madman and South American drug baron before he nukes Washington.

VERDICT

PC While this is essentially nothing more than a polished-up version of the original Mega Drive game, it's still damn good. The missions are more detailed and better structured than in Desert Strike – some of them actually require brain-work to complete. This is still one of the most playable and original shoot-'em-ups available on any format. A word of advice, though, use the keyboard, not a joystick. The game's tough enough without making life tougher for yourself by using a control method which doesn't come up to scratch.

Demons, cyberpunks and Dennis Hopper join together to form the most star-studded adventure yet. Interactive movie, anyone?

It wasn't long ago that software companies used the vocal talents of their receptionists, marketing assistants and programmers to make their 'talkie' adventures, but nowadays the likes of Mark Hamill, Tim Curry and Dennis Hopper are queuing up to star in games. It's not even as if these are has-beens, either: Hopper, the star of Hell, is a main player in Hollywood with Speed last year and Waterworld this year. Could it be that Hollywood is taking games seriously at last?

Perhaps, Hell is a huge, cyberpunk adventure. The storyline is complex, but basically America is being run by a tyrant (Grace Jones) who has outlawed smoking, drinking, gambling, free speech and computer technology. She has cut a deal with the demons of Hell so that any law breakers will be damned forever. The heroes, Gideon and Rachel, are government agents, but they find out that they've been betrayed. Someone wants them dead, and they must find out who and why before they are dragged down to Hell forever. This means dealing with outlaw gangs, corrupt government officials and even the demons themselves, including Hopper's Mr Beautiful.

It's difficult to know where to start with this large, non-linear game, but the idea is to travel around, talk to people to find out information, solve puzzles, carry out errands and recruit people to your cause. Much like any other adventure, really, except that this is a very tough game and the complexities of the plot are often baffling. Still, this is an impressive title which is both slick and attractive, so it should please experienced gamers who are looking for a challenge.

▲ **Combat happens automatically, but to win you usually have to get hold of a particular object or solve a puzzle beforehand. Otherwise you're toast.**

▲ **Gideon and Rachel have to deal with many unsavoury types as they try to find out who wants them dead.**

HELLRAISERS

This is Mr Beautiful, down right demon, trouble maker and professional Dennis Hopper looky-looky. In fact, he even sounds like Dennis Hopper. Hmm, now I wonder why that is?

VERDICT

PC CD-ROM

There's no doubt Hell is a good-looking game - the locations are atmospheric and although the animation is jerky, the characters look smart. But there are two problems with the game: firstly, the music (and I use 'music' in the loosest possible sense) is tuneless and annoying, and secondly, the puzzles are obscure, making the game baffling to play. It's completely non-linear, so you're never sure what you should be doing next, which can be daunting. Even so, this is a polished, glibby game which is rewarding once you've got in to the game.

Arcade Beat-'em-up

40p/play Out Now

Saturn and PlayStation versions planned

What's the world coming to? A Capcom arcade beat-'em-up that isn't Street Fighter? Surely not...

The designers of Children of the Atom have obviously done their X-research quite thoroughly since the coin-op features a host of familiar, and not-so-familiar, characters from X-comics old and new. They needn't have bothered, of course, because let's face it - everyone's going to pick Wolverine. He's everyone's favourite short, hairy, Canadian psychopath and just about the most popular comic book character in Christendom. And who wants to control boring old fuddy-duddy Cyclops when you can wade in with a four-foot-nowt pointy nutcase?

Well, once you see the stature of some of the other characters you may well change your mind. Eschewing the usual proportionism of one-on-one beat-'em-ups, Children of the Atom pits incredibly mis-matched looking opponents against one another. Witness, for example, the Sentinel which is almost the full height of the screen, compared to wickle Wolverine standing at about an inch tall. Combatively all the protagonists are pretty evenly matched thanks to the heavyweight employment of combo-friendly special moves. These are accompanied by suitably super-powered speech and visual effects which help distance the game from the hordes of other Street Fighter clones. Although if anyone was going to make a Street Fighter clone, Capcom is the last team you could really blame for it.

GET DOWN ON THAT KILLING FLOOR

Super heroes are well known for their mega-destructive battles, which usually end up with the local scenery taking more of a pasting than any of the combatants involved. Capcom is well aware of this, and has taken steps to include such un-public spirited behaviour in the game. The more powerful the attacks launched during the rounds, the more structural damage the floor incurs. After sufficient trauma the entire thing gives way, dropping the characters into a lower section of the environment. This can happen a number of times before the combat reaches rock bottom.

X-men: children of the atom

POWER X-TREME!

Many beat-'em-ups currently on the scene reward the use of combos, and X-Men is no different. Each character has, along with their energy bar, an X-Power bar. This fills up as you score more damage, and once it's full you're able to unleash your mega-powerful X-Ability, which is commonly good for up to 20 successive hits. The joystick commands for these attacks are predictably tricky, but it's well worth taking the time to learn them. It's also well worth learning how to counter (by avoiding or blocking) each of these.

▲ The huge size of the Sentinel makes it very difficult to co-ordinate.

▲ The speech for Wolverine is provided by the same actor who plays him in the ace cartoon, trivia fans.

▲ The Danger Room level constantly changes backgrounds.

▲ What do you call a sick superhero? An Ecch-man! Ha ha.

**SECOND OPINION**

Now why on Earth hasn't anyone bothered doing something like this before? I'd much rather play this than one of those crappy sideways scrolling things they usually produce with Marvel characters. X-Men is good because a) it's combo-lover friendly and b) it's flippin' X-Men innit mate? It certainly bodes well for any coin-op freak who fancies playing something that isn't Killer Instinct and as an alternative you won't find anything better in the arcades at the moment.

MARK PATTERSON

▲ Wonder when X-Men Champion Turbo Edition is coming out?

▲ If you're not into special moves you shall die quickly in this game.

VERDICT**ARCADE**

With Capcom being the granddaddy of the beat-'em-up scene you'd expect something pretty decent from its team, especially considering the potential of the X-Men licence. The resulting game exceeds all expectations. Indeed, if Capcom dropped the Marvel tag and called it Street Fighter 3 it's unlikely anyone would've been disappointed. The sheer scale of the action is exhilarating in itself, not to mention the fantastic presentation and superb playability. Roll on the home conversions, that's what I say.

X-men 2

They're X-y, they're sexy, they can't see without their specsies – it's the X-Men!

ould you send your children to a school where the headmaster is called Professor X? I

mean, Mr X is suspicious enough and Dr X implies underworld connections, but Professor X sounds like an evil Nazi scientist plotting to take over the world before destroying it. And he doesn't even run proper classes, his star pupils spend their days roaming the streets tearing up downtown neighbourhoods during fights with rival gangs. And he's bald, as if that wasn't enough.

But let's not be cruel, he is a goodie after all. And of course, with sinister slapheads contributing to the delinquency of minors as the heroes, you wouldn't be far wrong to believe that the real villains are beyond our mere mortal judicial system. In this latest platformer the X-Men (or an incarnation of their line-up) are pitted against just about every major mutant villain that ever appeared in the comics. You're given the choice of six characters before each level and after each lost life, with each having their own strengths, weaknesses and special abilities. Unlike with many games of this kind, it actually does make a big difference which mutant you use, with different routes for characters who can climb or teleport or who can't do anything. Sounds beezier, but is it? Now read on, true believers.

Each character jumps completely differently, so it helps to learn how they all behave.

Each character jumps completely differently, so it helps to learn how they all behave.

▲ Cyclops exhibits his amazing optic blast.

Beast's power is a bit useless – he just pounds the floor in an imitation of frustration. ▼

What a surprise, Wolverine's in the game. ◀ Hmm.

Nightcrawler is the best all-round character, and also has the best climbing abilities. ▼

WINGS DON'T FAIL ME NOW

Each of the characters has their very own super power, activated with a single press of the A button. Some of these abilities take a second to power up, the exact level of power being indicated in a meter by the life bar at the bottom of the screen. Release the A button too soon and your super skill doesn't live up to its full potential. Energy also affects special moves. If you're in tip-top condition specials pop out of your mutant body like the squirts and have the same sort of effect on your opponents. Take some damage, however, and there's a slight pause before your special works and its efficiency is reduced.

◀ Choose from six uncanny X-Men! On this screen!

▲ Cerebro, the X-Men computer, fills you in on the scam before each mission.

▲ Wolverine is rock hard. He's my hero.

NOW WITH ADDED INTEREST

Lack of originality is one complaint all too often levied at platform games. But not X-Men 2, oh no. Every level in the game features a new twist, sometimes even devices new to the genre. For example, you're dumped into the first level with a random character without knowing what's going on, after which you're asked to infiltrate a security complex, climb inside the robot workings of a giant Sentinel to destroy it, then find your way back out of the exploding building without so much as a little arrow to guide you. Once you've managed this, your mission briefing for the next section is interrupted after about 15 seconds (so you have to read fast) before you're cast off into space and... well, you get the idea.

▲ This is what the inside of a sinister Sentinel looks like. How educational.

■ **ISSUE 139: 72%**

SECOND OPINION

Sega has broken a couple of boundaries, here. Firstly it has actually managed to produce a decent X-Men licence, and secondly it's also gone and brought out an original platform game – something Sega hasn't managed to do for quite some time. The number of characters adds a lot of lasting appeal and the variety inherent throughout the game stops it from ever becoming boring. In fact, it's a bit scary.

GARY LORD

The emergency lighting makes it difficult to find your way out of this bit.

**VERDICT**

MEGA DRIVE
 While the X-Men have always had the potential for a great licence, so far none has appeared. Until now that is. The characters are, at last, sufficiently different to make an impact on the game which, at last, has been designed with the X-Men in mind and not Sonic or Johnny Flashback. The game kicks off at a cracking pace and gets more furious as you progress, moving at a fair lick and constantly throwing in new enemies and hazards. In short, this is one of the best action platformers Sega has released in absolutely ages.

Huh huh huh huh huh huh. Huh huh huh
huh huh huh.

Amazing though the unjustified moral furore surrounding Beavis and Butt-head is, it's not the most incredible thing about the show. More spectacular by far is Butt-head's resemblance to a very own pea-brained rock aficionado Rik Skews. Especially uncanny when you consider Rik is often jocularly referred to as Arse-face by his pals, which is nearly the same name. If only he were as funny.

Aah, we're only kidding. We love him really. Even if he does look like a cartoon character.

At least Rik has not been immortalised in his own game, though, which is more than the rest of us CVG writers can say. Now you, the player (and a second player if you so wish), have the opportunity to guide Rik and his friend Beavis around their town searching for the torn pieces of their GWAR concert tickets.

Along the way you're often forced to collect items to bribe or molest people with, avoid potential assailants, participate in a spot of couch fishing and generally belch and flatulate your way through life. The game runs in an almost LucasArts-esque hybrid of arcade running and jumping with adventure elements of item collection and puzzle solving thrown in. Can you get Beavis and Rik-head to the Church of Rock on time?

VERDICT

MEGA DRIVE

Beavis and Butt-head is well presented, features loads of sampled speech, familiar locations and characters and the same sense of humour fans of the prog' will expect. What it doesn't have, unfortunately, is the gameplay to back all this up. The arcade elements are what spoil things - they're too cumbersome and as a result you find yourself constantly dying and having to start all over again. Die-hard enthusiasts may glean some entertainment from the antics of the lead chaps (I did), but as a game this falls flat.

return fire

Destruction on a scale only a hyperactive three-year-old could match in the latest shoot-'em-up frenzy on 3D0...

They say the best things in life are free. Rubbish. The best thing in life is a big, red, throbbing Ferrari F40 (and Pamela Anderson sat in the passenger seat wouldn't go amiss either). Still I'm more inclined to believe that other old saying, that the best ideas are usually the simplest. Why I'm inclined to believe this particularly at the moment is because I've been fortunate enough to whittle away hours indulging in the latest 3D0 blast, Return Fire. It's a game so simple it's likely to turn into plankton and get David Attenborough to make a major nature series about it.

Destroy, destroy and destroy is the aim in Return Fire. Buildings, enemy installations, soldiers, trees, everything can be blasted to itty bitty little pieces as the player searches for the enemy's flag, tucked securely away inside one of their buildings. Four vehicles are on offer: a manoeuvrable helicopter, a heavily armed support vehicle, a tough tank and a speedy jeep. Take out the bad guys with the heavy weapons and then send in the jeep to pick up the flag. A brilliant two-player mode is also included where the aim is the same but it's more likely to end up turning into an almighty ruck, rather than any sort of strategy fest.

▲ Escape with the enemy's flag by using the speedy jeep.

ALL HAIL!

Rather tastefully, Return Fire celebrates each great victory by running a few reels of old footage showing a dictator-type (that's you, that is) basking in the glory of success while the populace has a good old knees up.

VEHICLE DUTY

Return Fire features three ground-based vehicles and a helicopter, each of which is important to the success of a mission.

Water isn't a problem if you stick to the lightly shaded parts. Stray deeper and your vehicles sink. For the helicopter there's the menace of the submarine which patrols the deeper water.

The Jeep: super fast. Use to pick up an enemy flag. Don't hang around, it is weakly armoured and has little in the way of weapons.

The Tank: the standard battle weapon. A decent blend between speed, armour and weapons the tank is a great all rounder.

APC: an armoured personnel carrier. Super armour, loads of powerful weapons but very slow. Keep away from water.

Copter: can cross terrain quickly and effortlessly but is slow to turn. Useful for taking out enemy aircraft. Watch out for AAA guns though.

▲ The standard view is above and behind, but it zooms in if a vehicle is not moving.

Each vehicle has its own classical music theme tune. And for the helicopter it's Ride of the Valkyries.

▲ Each level of the game offers a number of progressively difficult sub-levels to fight through. Only one has to be completed before you can progress to the next main level though.

SECOND OPINION

Return Fire is vaguely reminiscent of games such as Cannon Fodder or the crinkly Herzog Zwei on the Mega Drive in that it mixes strategy and action in pretty much equal measures. If you just wade in blasting you're certain to come a cropper, and if you spend too much time planning things out you can expect similar results. The controls are perfectly pitched and the capacity for cruelty within the game does inspire some evil behaviour. Basically, this is completely ace.

VERDICT**3DO**

While I write this piece it's Valentine's Day, which is apt as I love Return Fire. Gameplay's similar to the old Amiga version but the audiovisuals have been beefed up. Now there's a neat 3D engine which pans the graphics out when you're driving at speed and zooms in when the action is slow. Special mention has to go the music and sound, I don't think I've ever heard better. There's not that much variety, but the two player mode and simple, but highly charged, action is exhilarating and a worthy purchase for blast-ing-starved 3DO heads.

Oh dear. This is the losing screen, and you'll get to see this quite often later in the game.

metal marines

If the word 'strategy' sends you to sleep, worry not because the words 'Marines' and 'Metal' will wake you out of snoresville pronto.

I can't say I'm a big fan of hard core war games – let's face it, any game where you spend a weekend reading the manual is more like hard work than fun. Metal Marines, though, is a breath of fresh air. Yes, it's a strategy game and yes, it's about war, but don't let that put you off. Think Battleships (that old pen and paper game you used to play in the car on the way to your Aunt Florrie's) and you're half way there. It's a bit more complex, but you can pick it up and play it without touching a manual and it'll keep you going into the wee small hours.

You start with an island, a base (or three, later on in the game) and some weapons, namely missiles and metal marines (big, transformer-type robots which do lots of damage). Unluckily for you, so does the enemy. This game runs under Windows, so your island appears in one window and the enemy's appears in the other. The idea, put simply, is to blow up his bases before he destroys yours. You have a small amount of cash which you can use to buy more weapons and defences such as gun pods (for dealing with enemy marines) and interceptor missiles (to, er, intercept enemy missiles).

To begin with, the enemy island appears blank, but as you send your missiles and marines over there with a simple click of the mouse, his installations become visible. The best strategy is to take them out with your missiles, before polishing off his bases with your marines, but since he's trying to do the same to you, you can't forget about defence. The computer opponents are tough enough, but for added challenge you can also play against a friend over a modem or serial link.

▲ I'm making short work of Commander Joan Rile – her base (top right) is getting trashed by one of my marines.

▲ The first level is easy – you start with lots of defensive weapons and the enemy has hardly anything!

You can defend your bases with camouflage. Enemy marines will ignore camouflaged bases. Only missiles can destroy the camouflaging.

Radars are pricey but improve your missiles' accuracy. It's a good idea to take out enemy radars as soon as you can so more of your missiles hit home.

YOUR CREW

Metal marines are great for attacking, but are a good defence alternative to gun pods.

Missiles are your basic attack weapon, but also reveal enemy installations.

Gun pods protect against attacks, but they aren't much use against upgraded marines.

Interceptors can be upgraded to a double version like this one. Useful for fending off enemy missiles, but are vulnerable to metal marines.

▲ Zorgeuf the Great is the toughest enemy of all.

▲ Commander Garland is one of the easier opponents.

VERDICT

PC WINDOWS

This game is very addictive. Although it sounds simple and isn't anything special to look at, it's one of those games that gets you hooked like nobody's business. The different computer opponents provide a real challenge, and occasionally you'll get stuck on one level which is frustrating. But even if you do manage to beat the computer, you can still play against your friends so the game has true long-term appeal. It's well presented, and comes on only two floppy's. Never mind multimedia, Marines has real gameplay. Get it now.

Imagine the world's a nice, fluffy place, where the days of huge film licences spanning pappy platform games has been banished forever. And then again...

It's nice to think that however bad a game gets, there's always an element, like the graphics for example, which can command a degree of respect.

ICE's Akira deserves a small amount of credit too, only because it attempts to mix a number of game styles together to make one good one. Sadly, though, it fails in every way. Let's imagine you've seen the film. Great, isn't it? Right, you'll be familiar with the bike-chasing scenes where Kaneda goes bonkers on the back of a motorcycle. In the game, this becomes a left-to-right scrolling 'de-astated' road, with big red cones to collect for points, fuel to pick up, and policemen and huge holes in the road to avoid. A bit Fisher-Price, and pleasant.

There's also a scene where Tetsuo goes bonkers in a high-security mental institution. This translates to a crappy, pre-Harlequin (hell, pre-Manic Miner) platform section, with the naifest, most washed-out graphics ever. And the worst gameplay. And finally, there's a bit where Kaneda goes bonkers on a flying bike, trying to save his great mate Tet. However, in the game, this follows a theme similar to the ancient arcade game Scramble; slow, tedious, with ridiculous and badly designed levels. The other 'levels', and I use the term loosely, are those three themes repeated over. Even the attempt to throw in scrappy bits of badly digitised film footage, presumably as a cover-up measure, hasn't worked. No, no, no, ICE.

ANIMATIONS 1, 2 & 3

These images, digitised directly from the film, show up between levels and, for eight seconds, at the start of the game. However, where ICE fell down was in apparently passing the images through a 'make great images appear awful' filter. Or so it seems, anyway.

▲ In the film, Tetsuo morphs into a planet-sized demigod. In the game, he's this turd-like thing.

▲ The art of ducking is enough to see the enemy soldiers off in the platform stages.

▲ The car is the best bit about Akira: it is faithful to its film counterpart. Unlike everything else.

VERDICT**CD32**

It's difficult to imagine how poor Akira is without seeing it first. Incredibly, the team responsible has turned each facet of the visually stunning film into a shoddy mish-mash of poorly thought out ideas. The film's high-speed, high-contrast images become pallid, washed-out pastel-coloured graphics; Mr Yamashiro's unusual and striking soundtrack translates to a stock piece of Amiga-generated music, completely lacking in atmosphere. And the gameplay; well, it's so poor it's laughable. I warn you now, stay away.

The A5/600 version hasn't turned up, yet, but I'll stake my pants that it's exactly the same. But without the good bits.

Scramble returns, in the shape of the appalling Flying Bike levels. Dull, tedious and stupidly difficult. ▼

◀ The 'de-astated' road of the first level is a cunning labyrinth of huge holes.

ALTERNATIVE**CD32**

Any game... EVER! No, really. Oh, all right then: if speed's your thing, then you might like to try Akira's superb Roadkill. Or, perhaps Paygnosis' Flink, for a halfway-decent platformer. But personally I'd consider cutting off my own legs as an 'alternative' to playing this drivol.

Fat blokes in bad pants – it could be the WWF, or it could be a nearly successful boxing game...

Toughman is an American TV show where all-comers get to take on rock-hard boxers in the square circle and get their head punched in. You're right, they're psychos. And, as the bloke who does movie trailers puts it – this is their story...

Put simply, the wannabe contestants leave their little desks at law firms and late-night kebab vending establishments, step into the ring with someone a lot fatter and, basically, harder than they are, then wonder why the next face they see answers to the name of 'matron'. Naturally the slaughter of brain cells at the large-gloved hands of a bloke called Knackers Headrush (or whatever boxers call themselves these days) isn't something that's easy to simulate, and to give EA its due it's almost succeeded.

They've got the graphics. They've got some fairly realistic moves. They've even got special attacks and nasty blue pants for some of the boxers – but it's too difficult! Pulling off particular combinations is made nearly impossible by the atrocious control system. It is truly turduantil. Although even if it wasn't a problem this, like so many boxing games before it, would only have a very limited lifespan.

toughman contest

▲ That's it, duck, weave and don't get punched and you won't get hurt.

► If white ment can't jump, the fat men can't fight, apart from George Forman.

▲ And Ready 'the kid' Break makes a stirring comeback.

SCUD MARKS

When it boils down to it, most people can't be bothered with this nabby pambly ducking and weaving stuff – you just want to know the best way to delivering rief on his fat face. Well, here you go...

▲ Once you get the other bloke reeling, it's up to you as to what kind of blow you want to deliver. You don't get marks for style, but you do feel a whole lot better if you nearly take his head off.

▲ Jabbing is an all right way of weakening an opponent, but it doesn't look good. We all want to be both big and clever, and the way to do that is by using big and clever punches such as the hook.

NEW FACES?

Call us mad, sad or Eric, but we're certain a few of the boxers in the game are no strangers to us. See what you think...

It's Clark Gable, innit.

And this is Hawk from Spencer For Hire.

Definitely Kurt Corbain, wethinks.

How about 'fat' Merv Hughes the cricketer?

Or Ming The Marceles, ruler of Mondo?

And this gun runs our local kebab shop.

Go on Keef, chin him in the face with your magic extendo-fist. ▶

Saddam Hussein practices the right-handed salute of console magazine staff the world over. ▶

See her, she could have you she could. And your mum. ▼

▲ You'll be pickin' your teeth offa da floor - goddit?

▲ Who's the loser in the yellow? That's you, that is.

▲ Now this is something you don't see much these days. A well-delivered uppercut will take the recipient off their feet and ensure little tilt signs will appear in their eye sockets before the end of the round.

▲ Still, there's something to be said about getting out of the way. You don't get hit for one. Anyway, if you're quick enough you won't have to worry. Except being quick enough is impossible with these controls.

**VERDICT****MEGA DRIVE**

Down the years one problem programmers have encountered is they have loads of good ideas which the technology just can't handle. And here's one of them: large, attractive graphics which are just beyond the Mega Drive's capabilities, especially when it comes to making them move, which explains why the controls in Toughman are so sluggish and frustrating. It is this, and the fact that this is one of the toughest fighting games in any arena, which drags this game down a lot further than it really deserves to be.

Blooming Heck! Blimmin' Cripes! Blinkin' Charles it's those prehistoric namesakes the BC Racers.

Speed is not one of the words that springs to mind when you're racing round the tracks in BC Racers. But that's not really the effect Core's after in its latest foray into PCdom. This is not really your Ridge and Virtua Racers, but more your cutesy, fun, bash-your-fellow-racer-over-the-bounce-with-a-club sort of shenanigans. Much the sort of gameplay you'd find in Mario Kart and Street Racer from Nintendo and Ubi-Soft respectively.

Core hasn't gone out too far of its way to change this from the Mega-CD original, although it is noticeably faster and smoother. Race round eight different tracks, and with some particularly lush backgrounds and well-scaled sprites it looks a treat. But apart from that it has the same difficulty settings and the standard viewpoints - right behind the racer, slightly further behind, and further and higher behind. It does, however, support the three PC control systems of joystick, mouse and keyboard so you don't have to rush out and by a gamepad. Of these the keyboard work's best as the racers are incredibly responsive - which is exactly what they should be. As for mouse-control, forget about it, it's just too darn difficult 'cos the game is nice and fast later on.

▲ Here are your BC Racers, though there's no clue as to what attributes they all have.

This track sees you rummaging around in the dark, with some lovely lighting and headlight FX. ▶

▲ There's no slow down in the two player mode.

VERDICT

PC CD-ROM

The PC version of BC Racers is a lot better than the Mega-CD version, the backdrops look really excellent, the bikes handle well, and the two-player mode is pretty good. The problem is that the game doesn't have that 'play me again' element. The characters have a samey feel about them, and the drone opponents seem to fade out of existence. The prehistoric theme is also a bit lame after we've had two summers of Jurassic and Flintstones. These moans aside, BC Racers fits into the not-bad-and-worth-a-blast category

Ever heard of Malteser Girl? Dolly Mixture Man or Twist Cough Candy Woman? No, neither have I but here's a boy you will have...

A great, big steaming lump of jelly may seem a rather bizarre gaming hero - especially one whose party trick is producing a mighty fist from his nether regions to knock anyone in range for six - but it certainly works for this game.

Jelly Boy's a platform jaunt which has our wobbly hero bounding around six massive and varied worlds - all of which contain several different levels - in all his naked glory. The main aim of the game is - unsurprisingly - to reach the end of each level without being blitzed by the army of baddies which accost you on the way, and without exceeding the tough time limit. To complete the game properly though, you have to collect a piece of jigsaw from each level - which is usually secreted in the most inaccessible places.

You're faced with masses of obstacles and puzzling situations which can only be overcome by finding one of the special icons and transforming yourself into another shape. For example, if you're faced with a brick wall, turn into a battering ram and bash your way through; if the impending fall looks too risky, change into a brolly so you can float down, or if you need a bit of extra lift, mould your shape into a pogo stick. Just remember: bash all corners, watch out for the bonus rooms and gather as much fruit as you can for extra lives, extended time or invisibility.

▶ **To complete the game properly, Jelly Boy has to collect a piece of jigsaw from every level which are usually concealed in the most obscure and inaccessible places.**

▶ **The battering rams are great, putting pay to any impudant wall which tries to stop you in your tracks.**

▶ **I don't know why Jelly Boy is looking so miserable - turning into a pop bottle was really an inspired idea since his fizt spurted out and wasted all the approaching enemy.**

**VERDICT****MEGA DRIVE**

I first saw Jelly Boy in development at Probe HQ more than three years ago. It's a shame it wasn't released then because it would have been revolutionary. Don't get me wrong, it's still a good game, but now a million and one other platform games have hit the Mega Drive, it's lost the edge a bit. Graphically and animation-wise it's a winner. It's also a big, varied and very tough game, with lots of secondary aims apart from the obvious of getting to the end of each level. All in all a winner which wouldn't go amiss in anyone's collection.

3 Is an out-and-out arcade, sci-fi explosion-packing blast just what the 3DO's CD drawer is itching for? Well let's hope so because Starblade's laser-pumping Geo Sword squadron has got its Star Wars impersonation off to a 'T'. Is the force with it or not...

T The rebel forces are preparing to attack the Deathstar, C3PO is having one of his heads, R2 is bleeping and blurring all over the shop and Master Luke is... sorry wrong space saga. This is the one that started in the arcades of yesteryear... 1991. And popular it was. You could be very easily forgiven for thinking that this was Star Wars, since you have to destroy Planet Red Eye. At certain points Starblade is even more derivative when Tie Fighter-type craft whizz all over the screen trying to fry your ass.

Starblade is not only reminiscent of Star Wars per se, but many of those old-fashioned early-eighties straight-forward shoot-'em-ups where firing blinding is almost as good as trying to apply tactics to the proceedings.. You're supposed to be aided and abetted by some bloke blathering on in your shell-like, telling you things like "You kill the ones on the port and I'll take the ones on the starboard", (port means left by the way). The problem is that these instructions seem to make not a blind bit of difference in your quest to save whatever it is you're meant to be saving. Of course, that might have something to do with some of the graphics being streamed straight off the CD..

▲ This is the Planet Red Eye, and I bet you can't guess how it got its name.

▲ Don't hit this, it's Kal El's spaceship from Superman the Movie.

You won't be glad to hear those standard 3DO explosions are in full effect in Starblade. ▼

Starblade

▲ See that blue laser-like line, that's your weapon that is. Your only weapon in fact.

IMAGINE THIS, ONLY BIGGER...

But big doesn't usually mean better, for example you don't want a great hefty great Walkman in your pocket, do you, or a hifi that takes up half your bedroom. So case in point that big doesn't necessarily mean better. In the case of Starblade though, it does because in the arcades when you had six of you playing on six different screens it was better. No really, it was.

▲ All great gamers like the high score table. Shame it's not a great game.

▲ These grey sombre buildings sum up this fly-through section, actually.

▲ Starblade has lots of bits that are ripped from other sci fi sagas. This looks reminiscent of Buck Rogers' launch pad.

▲ I think you can safely call this one a 'hit'.

This Octopus reactor has some tough defences to get past.

▲ The Mother Ship fires these four asteroids at you, so you've got to be quick.

VERDICT

3D0

3D0 programmers I assume have a 3D0 programming kit dispensed by Trip Hawkins Inc, as each 3D0 game seems to have the same standard explosion. They're not so impressive this around though. The game doesn't have the wow factor it had in the arcades where a whole gang of you took control of a whole squadron of Geo Swords. As such the gameplay becomes tiresome without the notoriety of a licence like Star Wars and the visuals aren't anything new these days. This game just doesn't cut it I'm afraid.

It's a 3DO, right? So you'd expect 3D that'd make you go 'oh!'. Yeah, right...

Now remember kids, never, ever mess with nasty giant robots with long names. Even if they claim to have a stash of exceedingly cute puppies stored at Uncle Alfie's. No, they are most likely to shoot you, then stamp on your still-warm corpse. Or worse still, force you to buy a game about them.

It never ceases to amaze us when we try to think what was going through the programmers' heads when they complete a thing like this. Surely they can't be pleased with it? If we did that then we'd be doing the publishing equivalent of wiping our backsides on a bit of paper and then charging a fiver for it. Whatever the case is, this 3D blaster is dead poor. It's not only the appalling 3D engine which causes the trouble, but the horrendous gameplay. All you're asked to do is wander around trying to find the right lift to take you to the next floor. And as each floor is populated by around half a dozen robots, you're on your own most of the time. This certainly isn't how we expected this game to turn out.

There, got through the whole thing without mentioning Doom once.

Alfie Davros! ▶
We must destroy,
destroy.

◀ You'd have thought mad old Doctor Diabie would have made a better set of arms.

I AM TRONK-9

The robots in Iron Angel aren't exactly imaginative. Take these blokes, for example, one of them looks the way Davros would have looked if he'd run out of Dalek parts and had to build his wheely bit out of Lego.

3DO

I didn't see the beta version of this and only had Rad's preview to go on, and from that I thought it sounded quite good. Since then I have experienced the bitter taste of disappointment while Rad has experienced the bloody taste of my fist. 'This', to quote Beavis, 'sucks'. It's slow, unimaginative, unplayable and, in a nutshell, a bag of crappy old pants. If you're after a 3D explor-blast, go for SSI's Slayer, it's not fantastic but a ringworm hamburger is preferable to a couple of hours sat in front of a 3DO playing this.

sonic drift 2

They scrapped the original, so is it second time lucky for Sonic and pals?

You wouldn't have seen the first Sonic Drift in this country because even Sega realised it was just too darn crap to be worth releasing. And a good thing too, if they had chances are nobody would believe us when we said that this is actually a very good game.

It may sound strange but Sonic Drift 2, despite being on a handheld, is probably the closest thing to Mario Kart on any system. This is mainly down to the fast scrolling and fluid gameplay which is normally missing from this kind of game. On top of this are all the features you'd expect - multiple courses, different cup competitions, plenty of characters to choose from and enough bonuses and special features to distract you from the real business of racing.

If you pick a fast character they will slide all over the place while the fat slow ones stick to the road like a run-over rabbit. Each character has its own special move, from Sonic's turbo boost to Robotnik's unsporting mine-laying activities. Using one costs two rings, although plenty of extra ones are scattered around the track waiting to be collected. Dirty tricks, eh? Dontcha just love 'em?

▲ Oh no, an ice level. Thank God there isn't a mine cart one.

▲ Use your turbo Sonic, that'll scupper Knuckles.

▲ The nearest thing to Mario Kart you can get.

▲ The track guide at the top is well visible.

VERDICT

GAME GEAR

The difference between this and the first Sonic Drift is like the difference between a pint of Guinness and one of diarrhoea - although that does usually depend on what pub you're in. Whatever way you look at this, Sega will be hard-pressed to produce a better handheld game all year. All the right things are in here and with the two-player link up feature, you couldn't ask for more (apart from free Guinness vouchers).

So you want a new games machine?

As a games machine the PC has really come into its own in the past six months. Sure, games like FIFA on 3DO or Ridge Racer on the PlayStation look impressive – but the problem with any console is that they tend to stick to what they're good at. That's fine if all you want is action games. But if your tastes vary, and you want to keep up with the latest software, a PC is definitely the smart move because it has the capability to adapt to new styles of game and changes in technology.

Just look at the ground breaking stuff that's coming out on the PC first (now that games developers are really starting to make use of the power and flexibility of the PC) like Wing Commander 3 and Doom, or the forthcoming 11th Hour and Phantasmagoria shockers. The price of PC games is far lower and the sheer number of releases every month is vast.

How much you want to spend on a PC depends on how far you want to go. You can get up and running for less than £1,000 with no trouble, and you can keep adding flash new extras and upping the power of the system for as long as you've got the dosh.

For the sake of argument, let's imagine we've just one the lottery. What would you need to put together the ultimate games-playing PC if money was no object?

Well, you're going to start with a mother of a basic system...

Powerwise, it's got to be driven by the latest 64-bit, 100MHz, Pentium chip. Some PC games are already 'Pentium only' or 'Pentium optimised', like US Navy Fighters and Wing Commander 3. A real flier from the

Before the next generation of consoles arrive from the Land of the Rising Sun, why not consider the other option: a PC. Not only can you play some of the best new games, but a whole host of other options are at your finger tips...

likes of Carrera or Compaq will set you back about £2,300. Ouch!

You'll probably want to make some tweaks even then: upping the RAM to 32Mb will really kick games into life, and a big hard disk is always an essential (let's say the 720Mb Quantum drive at £189). And a 64-bit video card like the Diamond Stealth 64 (£389) will make things fly faster than a speeding bullet.

Last, but by no means least, you'll need a decent monitor. Let's skip the standard SVGA, 14-inch PC job: if you want the ultimate in visuals for your games then it has to be a huge, 21-inch Sony monitor (£1,599). So for around £5,000 we've got the basics just about right, now for the essentials check out the different boxes on what peripherals you're gonna need...

WHERE DO YOU STOP?

The best thing about a PC is that you can just keep on adding whatever takes your fancy — provided your wallet will stand the wear and tear. You could add a modem like the ultra-fast Hayes 28.8 Accura (£289) so you can indulge in a bit of Net surfing through cyberspace or dive into multiplayer games over the phone lines.

Then there are MPEG cards such as the first rate Ace Coin MovieMaster 24 (£349) for playing full motion video games and movies on your PC (like a Digital Video card for CD-i, for example).

The list of possible additions and desirable gadgets for the PC is endless. How about a TV card like Hauppennage's WinTV system (£212). Let's get really pointless and throw in the

Zye Radio FX (£49) (a 16-band AM/FM programmable radio for your PC), or a graphic equalizer like the Platinum Pro from BitPower (£85). Perhaps a virtual reality headset like the Forte VFX1 (£700) or the CyberMax (£499) since a number of PC games like Flight Unlimited or SuperKarts already have built-in VR modes.

Joysticks

Although there is plenty of straightforward arcade stuff, the biggest PC games are often very complicated (particularly the flight sims) and they need something sophisticated to control the action.

There are a mass of different methods, from simple digital sticks through to cordless mice, gamepads (essential for beat-'em-ups — there's no way you'll ever hit the special moves using a PC keyboard), footpedals, flight yokes and multi-button analogue joysticks like Gravis' bizarre but extremely effective Phoenix or the Thrustmaster F16 FLCs.

The Thrustmaster is a monster of a flight sim joystick with buttons for everything, and there's always the option of adding the Thrustmaster Weapons Control System, too. With those two on tap, you've no excuse for getting shot down ever again.

CD-ROM

You can't be without a CD-ROM if you expect to play the best PC games, and the drives just keep getting faster. This is where the PC has a huge advantage over fixed CD systems like 3DO or the Saturn — PC drives are not only two steps ahead of the competition in terms of performance, they're also cheaper.

When a new drive becomes available you just fork out the dosh and drop it into your PC.

The state-of-the-art in CD-ROM

drives is Plextor's new six-speed CD-ROM drive, new out this month. Quite simply, it's the fastest off the blocks, and it's compatible with Video CD.

Sound cards and speakers

Unlike most game formats, a new-born PC will usually arrive on your doorstep lacking any sort of sound capability. That's why you need to add an internal card, ranging in price from £40 to £400.

How much you spend on a sound card depends on how fussy you are about sound quality. If you want to get the whole hog, there are cards out there that will give you directional 3D sound, Q Sound, Dolby ProLogic, MIDI compatibility, Chorus and Reverb, you name it, all at the same quality as an audio CD or DAT player.

For our hypothetical 'ultimate games PC' the obvious choice would be the Creative Labs AWE32 (£199).

As for speakers, well, to be honest most dedicated PC speakers are not worth the plastic they're made out of and you're far better jacking the whole thing through your hi-fi system.

But if you are after decent, standalone speakers then the Aiva TS-D20s (£129) make an impressive racket. And if you really want to throw money around, you've got to go for the Roland MA-20s (at a whopping £199) which will blast out an entire neighbourhood with beautiful, throbbing bass.

The ingredients for an 'ultimate games PC' ...

32Mb RAM
728Mb hard disk
64-bit PCI Diamond Stealth graphics
Plextor Six-speed CD-ROM drive
Creative Labs AWE32 sound card
Hayes Accura 28.8 modem
Thrustmaster F16 FLCs analogue joystick, Gravis Gamepad
Forte VFX1 headset
MovieMaster 24 digital video card
Roland MA-20 speakers
100MHz Pentium processor.

How much were you thinking of spending **£** sir?

**THE PC****CD-ROM DRIVE****SOUND CARD****JOYSTICK****SPEAKERS**

Under £800

OK, so cash is tight. Somehow you've managed to beg, borrow or steal about 800 big ones. Can you get a decent system for that? Yes. Just make sure you put the bulk of your money into a quality, expandable basic machine. You can add the luxuries later.

- Mint DX2/66
- £499

No frills PCs don't come much cheaper than this. It does the job in the processor department, but you will need to do something about the weedy RAM and hard disk capabilities because they're enough for todays games.

- Bluepoint ICD-310
- £99

Cheap, cheerful and as capable as any other double speed drive. It's dead easy to set up, so why pay more? Many double-speed drives are manufactured with the same components so have similar data transfer rates.

- Sound Blaster Pro
- £49

OK, so it's only 8-bit FM, but it's the only one you can be sure will work with every game. More than adequate. Sampled speech does get fuzzed though, so if you can afford the next one up, go for it.

- Quickshot Super Warrior
- £19.99

Mostly a flight sim stick, but the Warrior can double up as a good general purpose joystick if you have to. It's also very reliable, which is something rare in this price range.

- Cheap 'n' nasty
- £5.99

Any pair of cheap speakers from Tandy will do to start with. Or better still, hook the whole thing up through your hi-fi. Otherwise you'll probably be better off with a pair of decent headphones.

Under £1,000

This is commonly called the 'entry level' price for a PC. In other words, for near £1,000 you should get a decent brand name PC with a good specification, and expect it to last more than a few weeks without dying on you.

- MJN DX2/66
- £799

The MJN is a well made PC inside and out, and is a nippy games performer thanks to an excellent basic specification, with a good hard disk and enough RAM to get you started.

- Bluepoint ICD-310
- £95

As mentioned before, cheap, cheerful easy to use, and as capable as any other double speed drive. If you've got an extra £50, though, go for the NEC quad-speed.

- Sound Blaster 16
- £79

Moving up to 16-bit sound is a big plus, although you're still stuck with FM sound processing. Does the business, though. The reproduction is far superior its 8-bit cousin.

- Gravis Analogue Pro
- £29

Looks rude. Very rude. I'm not going to describe it - just go and look at one in the shop some time. Anyway... the Gravis is the best all-round PC joystick by a mile.

- ZyFi Pro
- £29

Excellent sound quality, with plenty of bass, is something of a surprise in specialist PC speakers. Normally, they're tinny, tacky and as much use as a fish on a skateboard. Not the ZIFis, though.

Under £1,400

It's a three way decision: buy a multimedia PC all in, and get lots of software too; go for a top-of-the-range 486 and spend some more on adding the extras; or find yourself a cheaper, super fast Pentium PC (you'll spend less on the extras) but it's probably the best option.

- Escom P60
- £1,049

A hugely powerful, well designed Pentium PC with a monster spec for the money (8Mb RAM, PCI graphics, 500Mb hard disk and so on). Gets you straight into the real power play.

- NEC CDR271 quad speed
- £150

Quad speed performance is essential for really good video and decent CD gaming. The NEC CDR271 puts this sort of speed at the price of last years double speed drives. 'Nuff said.

- Sound FX 3000
- £99

16-bit Wavetable cards like this are the dog's wotsits when it comes to top quality, better-than-your-hifi sound. The Sound FX is ultracompatible and really lets you crank it.

- Wingman Extreme £50
- Koenix SpeedKing £10

Logitech's Wingman Extreme can't be beaten if you're a serious sim nut. It's more responsive and has more features than other sticks at twice the price. Pick up a SpeedKing for arcade games and platform action while you're at it.

- Labtec CS1400
- £85

If you're still refusing to jack your PC through your hi-fi, then the Labtecs are big, powerful speakers that you'll struggle to better for under £100.

A GATEWAY PENTIUM PC WORTH £1,500!

That's right! Why go through the hassle of working your backside off for months, scrimping, saving and then spending just because you want the very best games machine offer?

No, you want the easy life, we all do. And all you have to do to make things easy for yourself is answer these three, dead simple questions, and you could be the proud owner of the following PC wunder-kit. With it you're guaranteed to be able to run the state-of-the-art software which has brought the PC to the forefront of home gaming. Heck, it's so powerful you could probably take over the world with it. And why not?

Best of all, the PC is the most future-proof system available. As soon as a new graphics standard comes out, all you have to do is by a new video card rather than a whole new system. The same goes for sound, drives, memory and all those other neat bits. And with the power of a 64-bit Pentium processor at the heart of it, your PC will be able to handle anything thrown at it for years to come.

The pack includes:

A P60 Gateway Pentium
PC with:
Soundblaster 32AWE
soundcard
Quad Speed CD-ROM
Drive
8Mb RAM
340Mb Hard Drive
SVGA Card

– and all the other bits
and pieces you need to
enter gaming Utopia and
leave the world of car-

HELP!

NEW MACHINES QUESTIONS

Dear Help,

1. I'm very confused with all the new super consoles being released and don't have a clue which one to buy. The consoles that I am trying to choose between are Nintendo's Ultra 64, Sega's Saturn or Sony's PlayStation. Could you please give me your opinion on each one and tell me which one you think will be the best?

CVG: Best at what exactly? It's difficult to say at present as not all of them have been released (and no-one in the press has even seen so much as a mockup of the Ultra 64), so giving an opinion is pretty tough! At the moment the PlayStation is picking up most enthusiasm from both software companies and the public alike, so if you're a rich geezer with cash burning a hole in your pocket, that's the one to go for if you want a super console NOW.

2. Will the Ultra 64 be sold with a joystick or joystick?

CVG: Knowing Nintendo, a joystick's much more likely.

3. Will the super consoles cost over £250?

CVG: Because they are classed as videos (though you'd have a job trying to tape EastEnders), super consoles are almost certain to be at least £250, unless the companies concerned are prepared to sell the hardware at a loss and make money on the software instead, like Nintendo and Sega do at present. This seems unlikely though, as the hardware is much more expensive to produce (and develop) in these super consoles compared to the 16-bit machines.

4. Why does the 3DO cost £400? It's only a 32-bit machine, while the Atari Jaguar is a 64-bit machine and only £230.

CVG: The Jaguar doesn't have a 64-bit processor, it's just clever adding up on the part of Atari. By the same maths, the PlayStation would be about 75 bit! Coincidentally Sega is using a similar ploy in Japan where the Saturn is being advertised as a 64-bit machine. The 3DO is true 32 bit, has a CD drive built-in and suffers from the same import tax problem that the other machines will face.

5. When will we see some Ultra 64 screen shots?

CVG: You've seen Crusin' USA on Ultra 64 already and rest assured we'll bring you more pix as soon as we have them.

6. Is Toh Shin Den really any good? In issue 159 you said the gameplay is like Street Fighter which is rubbish.

CVG: Street Fighter rubbish? We at CVG hope you're talking about the film and not the game otherwise we're going to come round your house and duff you in good and proper.

Except we can't because not only did you forget to put your address down, you also neglected to include your name. Doh! And Toh Shin Den is the business (see last issue for the full monty review), so there.

CD-I VS JAGUAR

Dear Help,

1. What would you buy, a CD-I or Jaguar?

CVG: Neither! Just kidding, the Jaguar would win hands down.

2. Does the FMV for the CD-I 210 work on the CD-I 450?

CVG: Yup.

3. Will the following games appear on the CD-I: Doom, Quarantine, Mortal Kombat, NASCAR, Another World, Alien Breed, Sim City 2000 or Theme Park?

CVG: Doom, are you kidding? Quarantine - no, Mortal Kombat - no, NASCAR - no, Another World is a possibility as Philips is releasing Flashback, Alien Breed isn't likely though, and neither is Sim City but Theme Park is a possibility.

4. Does the CD-I play music CD's too?

CVG: Yep, and competently too.

5. Is Bum:Cycle any good?

CVG: It's very good and is the best CD-I title to date.
Richard Cartwright, Leicester.

SUPERSMART

Dear Help,
Could you tell me if it's worth buying a SCART lead for my Atari Jaguar? Is there much much of an improvement in picture quality by using one?
R McGovern, Essex

CVG: SCART leads make a big, big difference towards improving picture clarity, although if you're using a telly it depends on how decent it is. If you plan on sticking the SCART lead in a monitor then it's essential, and is like the difference between AM and FM sound on the radio. And that goes for SCART leads for all machines, not just the Jag.

MORE 3DO TEASERS

Dear Help,
1 Will there be a stunning driving sim on the 3DO?
CVG: There already is. It's called *The Need for Speed* and scored a healthy 93% And for the more action oriented 3DO readers out there try *Road Rash* which scored an equally top 91%.

2 Who is responsible for CD films on the 3DO? When will the FMV unit be available?
CVG: Er... the various film companies perhaps? About Easter, but that could change.

3 Are UK/US games compatible with a Jap 3DO?
CVG: Many are but we've come across some that aren't, so try and play an imported title on a machine from the country you own before purchasing.

4 Does the 3DO have a strong, stable future?
CVG: It's too early to say, but if the high quality of recent software and the fact that many shops have sold out of their initial stocks suggest the answer's 'yes' at present. It's far from the worldwide success that *Trip Hawkins* had hoped for though and that without any competition, so once the likes of *PlayStation* and *Saturn* muscle in on the market who knows.

5 Will the 3DO become the most powerful console around with a Bulldog upgrade?
CVG: Yes, on paper at least. But while power might create more realistic games it in no way guarantees better ones.

6 What's the difference between the Panasonic, Goldstar and Sanyo versions of the 3DO?
CVG: At the moment it's only cosmetic, check out *Goldstar's* pad for instance. But differing hardware bundles from the different manufacturers might appear in order to create competition and therefore force prices down.

Steve, Kuala Lumpur, Malaysia

3DO TICKLERS

Dear Help,
1 I was thinking of getting *Demolition Man* on 3DO. Is it any good, because it looks wicked?
CVG: Yes, it's quite good with plenty of variety but not an essential purchase by any means and hardly 'wicked'.

2 When will the 3DO MPEG Digital Video cart be released in the UK and how much will it be?
CVG: Around Easter, about £250.

3 Is MK2 going to be released for the 3DO and if so when?
CVG: There are no plans as yet, but after the brilliance that was *Super Street Fighter 2 Turbo* we'd sure like to see what the 3DO could do with MK2. How

4 My dad thinks that the CD-i is better than the 3DO overall. Which do you think is the best for technology, games and value for money?
CVG: The 3DO wins on all accounts. Give your dad a good slap from us and get him to read the mag!

5 Will you be able to buy anything to upgrade your 3DO system to 64 bit?
CVG: Yeh, it's known as the *Bulldog* or less snappily the *M2* accelerator, and will be out at the tail end of this year. No prices confirmed as yet.

6 When will *Doom* or *Doom 2* be released for the 3DO?
CVG: In just a few months time you'll be able to play *Doom* in all its glory on 3DO. Whoopee!

7 Will Panasonic's 3DO be able to compete with Sony and Sega?
CVG: Don't write the machine off because although the 3DO is not technically as capable as Sega's and Sony's new machines, remember that Panasonic has got formidable corporate backing as it's owned by Matsushita (one of the biggest companies in the world). The 3DO has support from one of the biggest leisure software companies in the world too, Electronic Arts. And remember the other 3DO hardware developers like Goldstar will be contributing to the marketing spend too, which can only help the 3DO's cause.

MORTAL III INFO

Dear Help,
1 Is it true that *Mortal Kombat III* will only be released on SNES?
CVG: Nope, it will probably only be released on *PlayStation* and *Ultra 64*, and of course in the arcades.

2 When will the *Mortal Kombat* movie be released?
CVG: Too soon, but the summer probably!

3 Is it true that *Jurassic Park: Rampage Edition* is out on the Mega Drive. If so how much is it?
CVG: Certainly is and it's £44.99. Don't buy it though, because it's complete pap, just like the original game was on Mega Drive.

4 Is there going to be an *Earthworm Jim 2* on Mega Drive?
CVG: Yep, but how can *Playmates* possibly improve on it, that's what we can't wait to find out.

5 Have you got a cheat for either *Super Smash TV* or *Spideeman* on the Mega Drive?
CVG: No, try the tips section!

PC SPECS-TACLES

Dear Help,
Despite buying your magazine for almost eight years I still need some help please! I now have quite a collection of consoles and one Amiga computer and I'm soon to come into some money and have decided to spend some on a multimedia PC.

Thing is I'm at a loss when it comes to terms like DX, SX, 486, DX2 and 66MHz etc. What I want to know is which would be the best

machine to play games like *Doom 2* and the *Star Wars* titles on, as well as use art, music packages, multimedia and encyclopaedias. Also how many soundcards do I actually need, and will I require an MPEG cartridge to play movies and FMV games on CD? Will all movie and music CDs work with this set-up?
Mark Hogg, Derby

CVG: It's worth spending about £1,500 on a PC because then the thing won't be out-of-date in about six months. Ideally you should be

looking for a machine with these type of specs: 486DX2 66MHz (the speed of the processor), 8Mb RAM (memory), SVGA video display and about 500Mb of hard disk space. If you can, spend about £200 more and get a Pentium processor. These are becoming more popular and are likely to be required to run much of the new software released by the end of the year. Anyway, turn to page 98 for an top-excellent guide to buying the perfect games PC for as little money as possible. Or try to win one instead.

SEGA GO 'BOARDING AND GIVE AWAY A MEGA DRIVE 32X'

It's grim up North. Or so the saying goes, but one thing the CVG team found out last week is that it's bleedin' cold in the Midlands. The main reason why it was so cold, though, was because the CVG team were watching (and indeed taking part) the 32X SEGA UK PRO SNOWBOARDING TEAM. Hold on a minute, we know what you're thinking, 'there aren't any ski slopes round Birmingham'. And we here at CVG read the tabloids and know that when all the poshies go off poncing around on the ski slopes they are usually in France or Switzerland, not Val d' Brummie.

That's where we were wrong, though, because in Tamworth just outside Brum, there's the Snowdome wet-ski slope where we tried our hand (or should we say feet) at this radical sport. And no doubt that's precisely why Sega's decided to sponsor the snowboarding team as they compete on the ISF World Tour. As we're now all avid snowboarders you can't tear us away from the Normski's Channel 4 snowboard-

CHEAT MODE

It's cheating time! Put on your comfy slippers, grab a cup of cocoa and search your way through these four pages of wisdom that is the CVG crew's and numerous clued up contributors' brains all mixed together into one all-knowing pulp. Want to join our merry clan? We don't blame you but don't worry, there's no need to slaughter a goat or anything, just send in any scorching tips or cheats to the usual address (on the bottom of page 111) and you'll become one of us. Easy huh? So get to it...

PC

DESERT STRIKE

This isn't the most difficult of games overall but individual missions can provide more than a little grief. To swing the odds your way here's a handy little cheat which will allow you to skip levels as if by magic. Firstly go to the options screen and type WATERFALL. Now simply hit the F12 key to switch the unlimited weapons and invulnerability on and off. And if you press Q while in mid mission and then land, it's possible to skip to the next level, without having to complete all the missions. A hearty hurrah to D Windsor of Sussex for those pearls of wisdom.

CANNON FODDER 2

Another in the seemingly never ending line of class games from the Sensible Software production line; Cannon Fodder 2 has to be one of the toughest games ever created. Anyway we won't credit anyone in particular here, as a number of people have let us know

about this cheat. It's the same as the one in the original Cannon Fodder where if you save your game as JOOLS your leader will become a super started-up general with unmatched shooting ability.

RED ZONE

Time Warner's topper chopper blast was one of the highlights on the Mega Drive last year. No surprises considering the team behind it, Zyrinx, were responsible for the equally brilliant (and criminally neglected) Sub-Terrania. Here's some level codes thoughtfully provided by Paul Reiss plus some other biz courtesy of us here at CVG Headquarters.

Mission 4: ABACBCBACC
Mission 5: BAAABBBCCBB
Mission 6: ABBABCAABCA
Mission 7: BAAABBBAAA
Mission 8: ABBABCAACAC.

These codes help you start the missions with invulnerability.

Mission 4: ABBBABACBAC
Mission 5: BAACAABAACA
Mission 6: ABBCAACACCC
Mission 7: BAACAABAABA
Mission 8: ABBCAACACBC.

And there's a hidden game of Asteroids if you type in the following cheat: ABCACACBCAC.

DYNAMITE HEADDY

SNES

STRETRACER

Well, we'll be darned if it isn't another of these pesky games that puts a flipping big wedge between software reviewers. This time it's regarding whether Street Racer's better than old Nintendo fave Mario Kart. We don't think it is but it comes a pretty close second, and it's a classic game all the same.

Here's a few cheats courtesy of Sam Johnson in Leeds to whet your appetite even further.

1. To access secret tracks:

Go to the custom cup select screen. Press UL, UR, UL, UR, X and Y. The four tracks will appear at the bottom of the track list (tracks 21, 22, 23 and 24) and will automatically come up on the practice screen.

2. Modification of car performance statistics:

Any player can do this to affect their own car. Go to the car select screen and press X, Y, X, Y, X and Y. Then hold down the X key and move up and down, left and right to change stats. In three and four player mode you can only change stats when they are showing on screen, not when the character is showing only.

SUPER WING COMMANDER

There's one of those always handy debug menu things lurking away in this version of the classic, but dated, PC title. To get at it press and hold X while in the lounge area and then press B, B, C, C, A, A. You should hear a sound effect, and when you do release the X button. Now press the L and R buttons together and also the P button. A menu of options and sub-options should appear, which include being able to switch off the collision detection and selecting 'finger of death' which, when selected, will allow you to terminate any ship (including the Tiger Claw for moments of Xtreme power!) with just one blast!

SHOCKWAVE

'This isn't a game!' that bird in the cockpit is fond of shouting at you at regular intervals in EA's 3DO blaster. Well, actually it is and we've got all the level access codes to prove it! Enter the master pass-code first (B, A, C, C, A, A) and then enter any of the other codes by pressing P, inputting the code and then X to resume the game. By the way each cheat can only be used once and will reset at the end of the current mission so perhaps there is still a game left here after all!

- Level 2:** Mid-way through the stage there are two 'catlike' things. Fly behind them to discover a warp to level three.
- Level 4:** Again mid-way through, look for some hills and behind one of them will be a warp zone to level 5.

And of course any Star Wars aficionados out there can't have missed our Dark Forces review that starts on page 58, (and if you haven't noticed the cover then we're surprised you can read this, because it's not in Braille) the fab new Doom-style shooter from Virgin. Virgin has also given us 10 top-looking Star Wars T-shirts to give away to the runners up who don't win the Trilogy videos. So answers on a postcard to CVG Darker than Dark Forces compo, CVG, 30-32 Farringdon Lane, Farringdon, London EC1R 3AU, once you've answered this quick-quest...

And your question is...

What was Mark Hamil's last starring role?

All entries have to be here by April 15, the editor's decision is final and no one from Emap Images or Virgin Interactive can enter, so there.

BIG EDS

The editors of Britain's top games magazines tell us what games have molested their fancy this month...

**Andy McVitie, Editor
Nintendo Magazine System**

So what if neither the Ultra 64 or the Virtual Boy are going to be released over here until 1996 - even though Japan and the USA are going to get them both this year. There are still plenty of ace titles like Jam TE, Superstar Soccer, Hagane and the forthcoming Starwing 2. So I'm not bitter at all, me. Much.

**Steve Merrett, Editor
Mean Machines**

Panzer Dragon has been witing my oyster so to speak, as at last the Saturn gets a game to rival Virtua Fighter in the playability stakes. Aside from that, though, we've had a sneak look at Acclaim's Judge Dredd, and been practising our Cantona flying kicks on our office copy of the awful Victory Goal.

**Richard Leadbetter, Editor
Sega Magazine**

This month I've had the pleasure of playing the quite fantastic Panzer Dragon on Saturn. Import owners will probably be able to get their hands on it now, and I reckon it's going to be a top seller. Things are definitely looking up for Saturn - Daytona should be here sometime in April and that looks great.

**Alan Dykes, Editor
CU Amiga**

It's racing time again if you've got an Amiga, with Team 17's All Terrain Racing, Arcane's Turbo Trax and the delayed but bloody wonderful Super Skidmarks on the way during March and April. Our mailboxes (real and CIX) have also been jammed with 'in development' Doom-style 3D game engines. Hmmm...

**Andy Nuttall, Editor
The One for Amiga Games**

Street Fighter 2 on the Amiga was something of a non-event, but if you avoided it you might like to know that Super SF2 is under development - promising to be, well, super. We've got a full and exclusive Work in Progress, along with a preview of Virgin's CD32-only smash Lost Eden. Fab.

**David Upchurch, Editor
PC Games**

Although we've been exclusively hunting down aliens in X-Com: Terror From The Deep, it's Dark Forces that's made us gibber wildly with enthusiasm this month. We've also taken a peek at Descend, Discworld and Premier Manager 3, while Falcon 4 and Slipstream have fallen under the Preview spotlight.

**Christina Erskine, Editor
PC Review**

Much like our sister mag PC Games (and CVG) we have been clocking all the Doom clones this month. Of course there's Virgin's Dark Forces, but we've also been playing Descend from Interplay. The control method adds something new as you fly instead walk round the 3D texture mapped levels. Top stuff.

**Mark Patterson, Editor
Computer and Video Games**

Is Dark Forces better than Doom? Not quite is the answer. But being a sad Star Wars spanner it's one of the only games I've actually spent any of my free time playing. Still, I'm looking forward to Panzer Dragon on the Saturn 'cos I've finally given up on Magic Carpet and clocked Raiden so I'm in desperate need of a shoot-'em-up fix.

it's the Gallup charts

cartridge top 10

1	<p>FIFA Soccer '95 EA ■ MD</p> <p>EA's super good looking football game has been dominating the charts for God knows how long, but with great playability and some top sound effects you understand why.</p> 
2	<p>The Lion King Virgin MD/GG/MS/SNES</p> <p>Virgin's latest Disney license is setting well despite many reports that this game is rock. Long term gameplay and some super animation.</p> 
3	<p>Cannon Fodder Virgin MD/SNES</p> <p>Sensible Software's witty and clever shoot-'em-up is both taxing and fun to play, with some great variety in the missions.</p> 
4	<p>Donkey Kong Country Nintendo ■ SNES</p> <p>The spectacular graphics of DKC have ensured a healthy run of sales. It would appear. Not that we mind, because it's a great game, too.</p>
5	<p>Micro Machines 2 CodeMasters ■ MD</p> <p>The perfect cart for gamers who try to lead a social life. With the built-in joypad adaptor, the four player mode makes this one of the best multiplayer games ever.</p>
6	<p>Jungle Book Virgin ■ GG/MS/GB/MD/SNES</p> <p>Still hanging on in there, despite being some months old now. Just goes to show how well good platforms can do, even in a saturated market.</p>
7	<p>Mortal Kombat 2 Acclaim ■ SNES/MD/GB/GG</p> <p>Selling by the bucketload, and deservedly so, is Acclaim's fantastic conversion of the arcade game which changed the face of beat-'em-ups.</p>
8	<p>Starwing Nintendo ■ SNES</p> <p>An almost bizarre re-entry for the impressive FX Chip shoot-'em-up. Might be old and crusty, but it's still up there with the best of 'em.</p>
9	<p>Micro Machines CodeMasters ■ MD</p> <p>Retro-mania hits Megadrive owners as copies of Micro Machines fly off the shelves, despite the superior sequel sitting right next to it.</p>
10	<p>Mortal Kombat Nintendo ■ MD/GG/SNES/GB</p> <p>A similarly post-active phenomenon strikes Mortal Kombat as crazed blood-thirsty gore addicts snap up the first Kombat title to sate their demonic lust.</p>

NEXT MONTH

There isn't a next month. We're all doomed and the world's going to end.

In fact that's a lie.

However, you will most likely be doomed if you miss the next issue of CVG. Inside you'll find more editorial software coverage than in any other games magazine. Probably. Including:

Star Trek: TNG

The demo wowed us and the finished article should be even better.

Flight Unlimited

You've never seen a game quite like this before. Watch out for the major review.

Micro Machines 2

It's finally arrived on Game Gear and looks like being every bit as good as the Mega Drive version.

Jungle Strike

It's coming to SNES and Game Boy, but has the wait been too long?

Doom

The 3D0 version is about to roll - and we'll be there with it first. Lock and load.

Dirt Racer FX

Has Stunt Race FX had its day? We'll tell you next month.

Plus:

The most comprehensive new machines coverage around - including a few software surprises which we're keeping well under wraps at the moment.
