TECHNICAL HELP

Problem: I can't get my game to work?

Solution: Whenever a game does not run on your computer it is usually due to a memory or sound configuration problem between the game and your computer. This doesn't necessarily mean that your computer is faulty, it could just be that the way it's set up is not compatible with the game. All you need to do is bring in your computer (just the tower) and for only \$10* our qualified technicians will re-configure it so that the game runs. It's easy!
*\$10 charge for maximum 10 minutes

Problem: My computer is running too slow.

Solution: One easy way of speeding up your computer, (other than upgrading the hardware), is to tidy up your hard drive. Think of trying to find a pair of socks in a messy bedroom as opposed to a clean one. If your hard drive is messy the processor has difficulties finding a file. You can clean it up by clicking on "Start" then "Run...", then typing "scandisk" and pressing enter. After you have followed the prompts and completed the scan, repeat the process but this time type "defrag". These two system tools clean up your computer hard drive and speed up your computer. They should be performed about as often as you clean up your room.
