News & Reviews

GAMES NEWS 23

Basil the burglar is having trouble with mutant bath bubbles in a long lost tomb! Meanwhile Quasimodo, the infamous hunch-back is attempting to rescue the Fair Esmerelda!

REVIEWS 27

Jet-Pac scores another hit with our review team as the space-ace transfers to the Vic-20. We also take an exclusive look at Stonkers, the latest game from Imagine for the Spectrum.

VIDEO-GAMING 40

An exclusive interview with "Mr Pitfall", David Crane, Activision's ace games designer. Plus Professor Video.

ARCADE ACTION 50

We look at the latest laser-games, including Starblazer and Cliff Hanger, plus a preview of the eagerly awaited follow-up to Dragon's Lair.

NEXT MONTH 165

Listings

PLANET QUARRK 106

You are on a secret mission for the Intergalactic Federation when suddenly your ship malfunctions! Can you save yourself and your Commodore 64?

SKIER 112

If you've been watching Ski Sunday on TV you'll need no prompting to program this listing into your Vic-20.

ALIEN ATTACK 118

Space action for the Dragon 32.

EAGLE 84

The feathered fiends are coming to take you away — unless you can avoid their talons! Action for Sharp MZ80K owners. Can you steer clear of these birds?

RHINO 96

There's this giant beast chasing you through the forest and it's getting closer all the time. Animal magic for the Oric.

MISSION IMPOSSIBLE 100

Our Game of the Month brings you an atom-powered challenge for the Spectrum. Can you stop the reactor going critical and beat the security systems and save the reactor?

REVERSI 126

This game is one of the most popular board game conversions for computers. Now you can try your skill on your BBC B.

BRIKY 136

Briky is a happy little bricklayer — until the moles and bombs appear! Can you help him finish his wall with your Atari construction team?

Bumper bundle!

If you are looking for software for that new computer Santa brought you this Christmas, then this issue of *Computer and Video Games* is the one for you! If you look carefully, you'll find a bumper 52 page Book of Games attached to the issue. It's packed with listings for all the top micros — and there are a few surprises among them, believe us! All that, plus the regular bundle of top games listings in the issue itself. What more could a micro owner want!

What indeed! Well, how about a run down of the latest extra bits you can plug in or add on to your computer to make games playing more fun? Or perhaps you'd like to read the inside story of the origin of that lovable denizen of the arcades, Pacman? There's more from Japan too in this special feature.

HOW TO MAKE A RED DEVIL SEE RED

with accurate control from Suncom

Beating the game requires positive response and fast accurate control.

That's why beating the game requires Suncom from Consumer Electronics.

A range of 3 quality joysticks all with arcade-style features plus Joy Sensor, the ultimate, with precision, touch-sensitive control.

No stick to move, no resistance to movement.

Together with a range of C.E.L. Adaptor leads, they're compatible to a wide range of machines.

Check them out at your dealer - they're sure fire winners.

For details of your nearest stockist contact - Consumer Electronics Limited, Failsworth, Manchester M35 0HS. Tel: 061-682 2339.

Compatible with

Atari CX2600 Game System*
Atari Personal Computer Systems*
Commodore 64 & Vic 20 Computers*

An adaptor (sold separately) is available for
Texas Instruments TI 99/4A Computer*
Adaptor Model No. 11060

*These are the registered Trade Marks of the individual companies concerned.

 **Suncom**

MODEM FOR THE DRAGON

Dear Sir,
In your December issue you stated you do not know of any modems currently available for the Dragon 32.

Not so! Microcomputer Resources Ltd manufacture a Prestel/Viewdata interface which will allow you to link up to Micronet.

Maplin Electronic Supplies also sell a RS232 interface kit which enables Dragon users to link up to virtually any viewdata system or even Maplin's own Cashtel system.
*S. C. Parnell,
Benfleet,
Essex.*

BBC MICRO MYSTERY

I own a BBC Model B and at the side of my micro's keyboard there is a hole which is covered with plastic. I know I am not telling you anything you don't know but along with a few of my friends who also own BBC micros I could not resist the temptation to push it in. When it came off, I found that instead of seeing an interface for the ROM cartridges, which I had expected to see, I saw over half of the loudspeaker overlapping from the position where it should have been.

This mispositioning of the loudspeaker accounted for the coarse sound I had been getting even on a -15 setting. This was easily overcome by just taking the cover off and moving it slightly. But I still do not know what I set out to find in the first place so could you please tell me when the ROM cartridges will be available in the shops?

*Jason Dines,
Billericay,
Essex.*

Editor's reply: At the

present moment there are no ROM cartridges available for the BBC. Acornsoft are thought to be planning to release games cartridges some time in the future. As soon as they are out you'll be able to read about them in our Games News pages.

STOPPING THE VIC

Dear Sir,
I am writing to enquire what POKE command can be used on the Vic-20 to stop the STOP key functioning. I have seen this used on cartridges for the Vic-20, as when the STOP key is pressed, which would normally break out of the program, the program will continue as normal.

*Andrew Griffiths,
Mirfield,
W. Yorkshire.*

Editor's reply: The run/stop — restore keys can be disabled with this line: **POKE 808, PEEK (808)+2:POKE 37150, PEEK (37150) AND 127:** The keys can be turned on again with this line: **POKE 808, PEEK (808)-2:POKE 37150, PEEK (37150) OR 127.**

POKEING THE ATARI

Dear Sir,
I own a 16k Atari 400 and recently I came across a few POKES. When I POKE 742,0 I discovered I now have 63k. Is that true? And also am I the first to discover that POKEing 703,4 into the memory gives a text window to GR0? Finally, the POKE which was published in December's issue was in the Atari Basic reference manual anyway! (Appendix 1-3).

*Michael Yick,
Sowerby Bridge,
W. Yorkshire.*

Editor's reply: Unfortunately, expanding

your Atari's memory is not so simple, or cheap.

As you type in a Basic program, the amount of free memory goes down. The computer, therefore, keeps a counter in its memory with a value to tell it how much memory is remaining. So when you ask your machine how much free RAM you have, it simply looks at the value of this counter.

You have probably guessed that part of this counter is at location 742, and what you are doing is altering this counter. This does not alter the amount of RAM, but alters the amount which the machine THINKS that it has!

If the machine thinks that it has more memory than it should, it will try to let you type in a larger program than allowed. This will then cause a crash, probably erasing all your hard work.

The only use for such a POKE command is to fool your friends into thinking that you've typed a 48k program in, in 10 minutes!

INTERFACE PUZZLE . . .

Dear Sir,
I will soon be purchasing a ZX Spectrum and am puzzled over which interface to buy with it. The interface module I'm after should be able to be used with most of the software for the Spectrum 48k i.e. most of the games from Ultimate, Imagine and Silversoft. Another factor to be taken into account is price. I would want it to cost about £15 to £20, maybe a little more. Please could you also recommend the best compatible joystick with price to be taken into consideration.

*R. J. Cosgrove,
Wrexham,
Clwyd.*

Editor's reply: There are

a lot of joystick interfaces around and all use different software. Most new software will probably be written for the new Sinclair Interface 2 although the only one that works with all games would be a programmable Interface such as the AGF. One of the most popular joysticks is the Kempston Interface and joystick, with a price of around £30.00.

WORRIED TEXAS . . .

Dear Sir,
Recently, whilst browsing through the mags shelf of my local W. H. Smith, I noticed a computer magazine screaming that Texas instruments are pulling out of the home computer market due to great financial losses.

Two questions — does this mean that TI will not be manufacturing any more cartridges, modules, ROMS (whatever you want to call them!) and secondly, does this mean the price of printers, disc drives modems etc. will come down in price?

The article says, "as many as half a million units could be sold off before Christmas for as little as £50 each." I, being a TI user, am worried in case my machine goes wrong — will TI repair it?
*Paul Boakes,
Rochester,
Kent.*

Editor's reply: TI's announcement that they are pulling out of the home computer market is bound to lead to slashed prices on hardware, software and peripherals.

On the subject of servicing, TI have promised to offer a service to all people who bought their machines. There is considerable pressure on them to keep this promise and keep faith with the public.

BLASTERMIND! ★

At first glance this might seem to be just another version of a very popular game. How wrong can you be!!! True, the start is simple enough. The Spectrum picks a code of numbers or colours with a selection of levels of difficulty — and invites you to do the same. You then take it in turns to guess each others code from the clue supplied after each guess. An extremely well written, fast and very clearly displayed game, with almost inevitable defeat. This was exactly as intended but unfortunately *something went wrong*. During the programming strange uncomplimentary messages began to appear on the screen. At first they were so few they were not taken too seriously, but soon they could no longer be ignored. Somehow the Spectrum had been given a personality — a rather devious, supercilious, dislikeable, hateful, horrible mind.

SPECTRUM 48k £5.50

Side B contains a version of the game compatible with the excellent Currah µSpeech unit — even worse!!

The Quest of Merravid ★

VIC 20 (16k) £7.95 or Commodore 64 £7.95

A really challenging and enjoyable adventure, written by a confirmed adventure addict who grew tired of the ease with which he solved other adventures himself. Will accept and act on sentences containing up to nine words.

The adventurer becomes Merravid, charged with the task of finding, taking and then returning the magic Firestone of the Dwarves. However, overcoming the many novel and original hazards is no easy matter. Careful and imaginative thought is required if progress is to be made and the Firestone tracked down to the lair of the Dragon of Thargon. Even then the Dragon has to be defeated and the stone retrieved. A compulsive, extremely enjoyable and very user friendly adventure.

★ **COMPUTER MODERATED BOARD GAMES**

The original and completely unique two player games of cunning and strategy, strictly for more demanding games enthusiasts.

- * **CONFLICT** — a full scale military and economic battle demanding clear thought and decisive action.
- * **GALAXY CONFLICT** — a complex battle for control of the Universe.

Each game:—
ZX81 (16k) and SPECTRUM (48k) £11.95
BBC 'B', CBM-64, ATARI 800 £14.75

Attractively boxed containing cassette, full size board, pieces, maps, and full instructions.

Most games available from leading retail outlets.

Prices include VAT, Post and Packing

Mail order to: MARTECH HOUSE, BAY TERRACE, PEVENSEY BAY, EAST SUSSEX BN24 6EE

QUALITY NOT QUANTITY?

Dear Sir,
I have recently heard people criticising the CBS Colecovision because of the price of the games. These people are mostly Spectrum owners and I feel that this is a certain case of "quality not quantity". The Coleco system has by far the best graphics, better than nearly all home computers, and the games are ones which gamers are not likely to get bored with quickly.

The software list will be enhanced by Activision, Parker and Imagic, the latter's games for Intellivision being startling, so the games for the Coleco should in theory be truly magnificent when you consider the huge amount of built-in ROM.

I feel that anyone who seriously wants arcade-type games at home should go for the CBS Colecovision. Should this letter be published, I feel it would put many Spectrum owners very firmly in their place.

Tom Stungo,
Aylesbury,
Bucks.

REVIEWER RAPPED

Dear Sir,
I am writing to you because I am disgusted with your reviewer's views on the Electron. I do realise that the reviews are the opinion of one person, but before he makes any comparisons with another machine he should make sure he has all the facts.

Firstly, I would like to know why in his review of the Acorn Electron he states that it's a superior machine to the Atari? The Electron cannot produce sound through the television like the Atari. It has only 16 colours and Atari has 256 with 128 displayed at any one time.

There are many more differences, which in my opinion make the Atari far superior. I am slightly biased, just like your reviewer seems to be towards the Electron and BBC machines.

In the review on the 600XL and 800XL he states that the 600XL is 16k standard, but it can actually be expanded to 64k, and the 800XL comes with 64k. Both machines have 24k ROM and not 10k ROM as stated.

I would also like to add that one great advantage that the Atari gives, is the compatibility between the old and new machines. Unfortunately, a lot of manufacturers (i.e. the Acorn Atom and Electron which are two totally different machines requiring separate software), do not consider the users. Therefore, I thank Atari for enabling me to keep all my software library which has cost me over £200 plus, when I upgrade to their latest model.

I would just like to say that I find your magazine excellent, but please review your reviews before you publish. Wrong information could easily mean the downfall of a good machine.
R. T. Green,
Crumpsall,
Manchester.

VECTREX ERRORS?

Dear Sir,
I recently purchased the Vectrex computer games system and have found a few faults with two of its games, Spike and Minestorm.

The instructions for Minestorm say that when you clear thirteen minefields you enter a new universe with space ships and space dust to contend with. So far I have cleared 24 minefields with no sign of a new universe at all. Is this a misprint in the booklet?

The second game Spike gives you a lot of points if you move Molly's cage to the far left of the screen and jump for it. You lose a life but you can get a maximum of 65,000 points for doing this. Is this a fault or is it intended?

J Hansford,
Doncaster,
S. Yorks.

SNOWFLAKES FOR ORIC

Dear Sir,
As it is approaching Christmas and the colder months, there will be some snow (hopefully). But just in case there isn't, here is a program for Oric 1 owners. It draws snowflakes and develops into quite a nice pattern when the screen fills up.

```
10 Paper0:INK 7
20 HIRES
30 POKE #26A, 10
40 X = (RND(1)*200) + 20
50 Y = (RND(1)*160) + 20
60 P = (RND(1)*255):PATTERN
P
70 CURSET X,Y,1
80 T = (RND(1)*12) + 2
90 FOR A = 1 TO T:CIRCLE
A,FB
100 FB = INT (RND(1)*4)
110 NEXT A
120 GOTO 40
```

This program runs on a 48k Oric. However, for the 16k version just miss out line 30.
Chris Speight,

Bedale,
N Yorks.

SPECTRUM COMPILER

Dear Sir,
Having recently started a course at university which involves computer programming with Pascal, I am interested in buying a Pascal compiler for my 48k Spectrum to help me with my studies. Please could you tell me where I could get one and how much it would cost?

John Peden,
Renfrewshire,
Scotland.

Editor's reply: The HiSoft Pascal is available for the 48k Spectrum from HiSoft, 13 Gooseacre, Cheddington, Leighton Buzzard, Bedfordshire, LU7 0SR for £25.00.

STIX AND STONES . . .

Dear Sir,
Although we were pleased to see that our game *Stix* for the Commodore 64 was reviewed in your December issue there does seem to have been some confusion on the part of your reviewer.

The game concerns a struggle to contain an evil bundle of energy known as the Stix so that its power can be harnessed for good rather than evil. Force fields must be built, using the "field synthesisers" provided. Each game starts with four.

There are a number of hazards to avoid — the most dangerous of these is the Stix itself, and to quote from the instructions supplied with the game:

"The second hazard results from a design fault in the field synthesisers (the manufacturers have promised to put it right in their next model, but that isn't going to help you now). If you pause for more than an instant while constructing a force field, the field stabiliser disengages sending a ripple of energy through the field that will destroy the synthesiser (unless you can complete the field before the ripple arrives). Listen out for the hissing sound that the ripple makes as it moves through the field."

Unfortunately in the review this particular feature of the game is described as "a software design fault" and the reviewer finishes by saying that "Although the game was exciting to play, I feel this particular version will have to iron out its mentioned defects to become a games player's favourite". Defects?

I hope that this letter doesn't sound like sour grapes. We've had so many excellent reviews of *Stix* that we can handle the odd mediocre one. But to state that the program is being sold with a known fault in the software doesn't enhance our image, nor is it fair to the author, Andrew Trott.

Peter Calver
Supersoft,
Wealdstone,
Middlesex.

PHOENIX

SOFTWARE

PHOENIX, NOW THERE ISN'T A CHOICE...

Phoenix Software: Spangles House, 116 Marsh Rd. Pinner, Middlesex 01 868 3353

You can all stop holding your breath now! The moment you've all been waiting for has arrived. Yes, we're ready to announce the winners of our *Computer and Video Games* 1983 Golden Joystick Awards.

These are the awards that we hope will become a symbol of excellence in the software industry — a measure of a good software company and good products.

We know that many software houses work hard producing top quality software and provide good after sales service to their customers.

This is what *Computer and Video Games* hopes to reward by asking you, our readers, to vote for your top game and favourite software house — among other categories!

Since we first announced our Golden Joystick Awards several other award schemes have sprung up — but accept no substitutes, C&VG's joysticks truly reflect popular support for a game or software house because YOU have chosen the winners.

Throughout the year the C&VG office has been flooded with nominations for our various Golden Joystick Awards. A large variety of personal tastes and personal preferences came to light as we analysed the results — proving that one person's favourite game was another person's bowl of cold porridge!

Literally hundreds of games for all the popular micros were nominated. But despite the number of home computers on the market — and the amount of software around — all our award winners were clearly head and shoulders above their competitors.

All the Golden Joystick Awards were presented at a special dinner held in London. Representatives from all the top software houses were there to see Radio One DJ and computer-buff Dave Lee Travis present the Golden

Sticks. We'll have a full report on the celebrations and the names of the winners in the next issue of *Computer and Video Games*.

Don't forget — if you missed your chance to vote in 1983 why not get in first for our 1984 Golden Joystick Awards? Make sure you have a say in the awards next year by filling in the coupon we'll print in our next issue.

We're also keeping the names of our winners secret until next month too — but all will be revealed in our March issue. Unless you are one of the lucky people with an invitation to our grand awards dinner that is.

Remember we are also taking this opportunity to launch our search for the software stars of 1984. Competition is bound to be even tougher this year with more and more great games on the market for the new generation of home computers — so we hope you'll help us make sure that the right people get our awards.

We pride ourselves on being the top reader friendly magazine — so that's why we let YOU, our readers, select the winners. And this is why we feel that the C&VG Golden Joystick Awards are the only true reflection of what's best in the British software industry. Simply because YOU, the games player, choose the winners! And who can know better what makes a good game?

Meanwhile, thanks for joining in the voting for our 1983 awards — and if you think we've missed out a category for 1984 why don't you drop us a line — we're always open to suggestions!

There are a few surprises in the award line-up — but we're keeping up the mystery until next issue! So don't forget to rush out and get your copy of C&VG on February 16th.

ORIC Software

TANSOFT

ultima ZONE

A 100% machine code space trilogy—shoot the Walkons, avoid the bouncing Brunos, battle your way through the satellite zone. Requires 48k Oric.

£8.50

inc. V.A.T. post free

THE HOBBIT

In co-operation
with
Melbourne House.

At last, this best selling adventure is available for the Oric based on J. R. R. Tolkien's book 'The Hobbit' (included) a complete text and graphics adventure. Requires 48k Oric.

£14.95

inc. V.A.T. post free.

Our software is available from all Oric dealers and most good software suppliers. In case of difficulty please contact us on Teversham (02205) 2261 or write to us at:

TANSOFT

Unit 1 & 2, Techno Park, Newmarket Road, Cambridge

TERRAHAWKS WINNERS!

Flaming Thunderbolts! When we announced our Terrahawks contest we never realised we'd start an invasion of letters and postcards which almost swamped the *C&VG* offices!

We had to call in Tiger Ninestien, Kate Kestrel, Zero and the rest of the Terrahawks team to help us get through the mounds of mail.

They managed to come up with two winners out of the pile and very soon Miss C. V. Gibson of Lancashire and Donald Glose from London will be the lucky owners of a Philips G7000 video games centre complete with Terrahawks cartridge! Your prizes are on their way.

POT THE BLACK

No sooner had we cleared the giant pile of Terrahawks mail another huge flood of competition entries swamped the office — this time it was Pot the Black which caused all the excitement!

We asked you to help Freddy Frinkle, the man with the Golden Cue, clinch the world snooker championship by solving an a-maze-ing snooker puzzle.

And hundreds of you took us at our word. After we called in a JCB earth-mover to help us get through the mail, we finally managed to pick our 25 winners of Snooker games tapes, autographed by Snooker star Steve Davis and produced by new software house Visions.

We asked you to solve a maze and also if there could ever be a "break" of 162 in a game of snooker. And the answer is yes.

Here's how it works. Your opponent gives you a 159 start. You break off with a foul shot which gives your opponent four points, but leaves him snookered. He nominates a colour for red, pots that for 1 and black for 7 then scores 147 — the normal maximum break in snooker. He then wins the toss, pots the re-spotted black making a total "break" of 162. Simple when you know how!

SPECTRUM

John Chalmers, Birmingham. D. J. Hawkes, Wednesbury, W. Midlands. Justin Williams, Bowdon, Cheshire. Richard Burdon, Litchfield, Staffs. David Booth, Sheffield.

BBC B

John Abbott, Cookridge, Leeds. B. Johns, Southampton. J. Walker, Ramsgate. K. Wolstenholme, Manchester. Simon Campbell, Harrow.

LEGGIT FOR MORE LEGGITS!

What's happened to all you eager Atari owners in the Portsmouth and Southampton areas?

We've still got some free Leggit tapes to give away, courtesy of Imagine Software and, to give everyone a fair chance — we've decided to go nation-

wide and offer the tapes to all of you!

So, calling all owners of the Atari 400/800 and 600XL, fill in the coupon below and rush it back to us — it's first come, first served — and the first ones into the *C&VG* office will be the lucky winners.

Send in your coupon, marked Leggit, to *Computer & Video Games*, 8 Herbal Hill, London, EC1R 5EJ.

Would the winners of the Atari/Dixons competition, featured in the June issue of *C&VG*, please get in touch with Clare Edgeley on 01-278 6556?

There are five winners in Trevor Truran's Ostentatious Pyrotechnics competition featured in the November issue of *C&VG*. All five winners have been announced in the January 84 issue — would they please get in touch with Clare on the same telephone number?

Name

Address

HANDS ACROSS THE WATER...

You've probably noticed from our Mailbag pages that *Computer and Video Games* refreshes the parts of the world that other computer magazines just can't reach. And recently a few of our overseas readers have been asking for a competition which runs for a bit longer than just a month to give them a chance to enter.

Many of our overseas readers don't get their issue of *C&VG* until well after the rest of you — simply because of the vast distances involved. So we've decided to run a competition just for them.

OK overseas *C&VG* fans here's what we want you to do. Send us a good games program — that's all. We know there must be some great games writers lurking in the far flung corners of the world — and we want to find you! Make the game as original as possible — that's our usual plea to programmers — but we're always interested in a top quality conversion of an arcade favourite or computer game.

We've got three Sinclair Spectrum computers up for grabs, plus some software from *C&VG*'s vaults thrown in, for the top three programs selected by our team of reviewers. Runners-up will receive *Computer and Video Games* Year Books and The Champ t-shirts.

The winning programs will be published in *C&VG* and you could find yourself receiving an extra £25 if we vote your program a Game of the Month. All the programs we receive will be considered for publication. The closing date for the competition is July 16th 1984 — so you've got plenty of time to think about a program and get your entry off to us. Please fill in the coupon below and send it to *Computer and Video Games*, Overseas Readers Competition, Durrant House, Herbal Hill, London EC1R 5EJ.

Remember, this contest is only open to *C&VG* readers who live in Europe, Australia, New Zealand, Hong Kong — anywhere *outside* the British Isles!

Brrr! Deep in the confines of the frosty blue maze Pengy is pushing his way out of trouble. Pengy's frozen wasteland is a random maze constructed of blue ice blocks raided by the dreaded Sno-bees. The sno-bee's sting is deadly, but Pengy can retaliate by squashing them with the ice blocks that he pushes around. Pengy is based on one of this year's arcade successes, and this version captures all the action and addiction of the original. Packed full of features, super smooth graphics, flashing and bonus blocks, double score bonuses, dizzy bees, and hours of entertainment!

ANY SPECTRUM.

PENGY

TUTANKHAMUN

48K SPECTRUM ONLY—The treasures of TUTANKHAMUN are awesome—but so are the creatures that guard them. Explore the pharaoh's tomb which is a very large series of scrolling mazes separated by locked doors. You have a limited time to unlock the doors with the keys, and escape with the treasure. Luckily you are armed with lasers and smart bombs as you will have to face a horde of guardian cobras, spiders, skulls, monsters and mummies. TUTANKHAMUN is what you'd expect from Micromania—fast, furious arcade action-packed full of arcade features: 100% machine code, fast, smooth, hires arcade action; tomb is over 40 "screens" long, opening doors, keys, treasures, maps, level selection, sound effects and tunes.

CYBOTRON SPECTRUM GAMES

The fastest, meanest robot shoot-out game ever. Based on the arcade game that made Defender look tame, CYBOTRON is impossible to beat—only speed and skill can save you from the chaotic robots. Packed full of features: Four types of robots, bombs, multi-directional plasma lasers, up to 50 robots on screen. 100% machine code, a game that will test your reactions to the limit. ANY SPECTRUM keyboard only operation

100% machine code, fast, smooth, hires arcade action. Kempston, cursor key, joystick or keyboard operation. Games available direct £5.95 inc. p. + p. 24 HOUR DESPATCH, or from good software outlets. Trade enquiries invited. Good programs always wanted.

MICROMANIA

14 LOWER HILL ROAD, EPSOM, SURREY KT19 8LT

GHOST'S REVENGE

ANY SPECTRUM. Full arcade features; realistic gobbling, four coloured ghosts, dot and power pods, very intelligent chasing/running ghosts, eat blue ghosts for bonuses, tunnel, normal or INVISIBLE maze, 10 different selectable levels. 100% machine code action, excellent fast graphics, sound effects and tunes.

G·A·M·E·S N·E·W·S

NO EASY ESCAPE FROM SCARTHORPE!

URBAN UPSTART

Tired of fighting Orcs or exploring futuristic alien cities. Do you yearn for some 20th century adventure?

Urban Upstart is an adventure set in a present day inner city area called Scarthorpe. "A town so tough that even the dogs carry flick knives. The sort of town where rebuilding means a coat of paint and where people queue up to queue up for a job." Or so says the advertising blurb at any rate.

You play the part of a street-wise kid who's trying to escape the horrors of violence and deprivation in Scarthorpe, but escaping from the town is no easy task. Crazy muggers and corrupt policemen lurk around every street corner. Every location has a graphic display of the scene, ranging from a hospital to a building site.

If the secret police get too much, you can always save a game on tape and put your baseball bat down and have a rest.

The game runs on a 48K Spectrum and is available from Richard Shepherd Software at an asking price of £6.50.

GOOD NEWS FOR NEW WILLY FANS!

MINER WILLY

Miner Willy, the hero of Bug Byte's top selling Manic Miner, is shortly to be starring in a version of the game for the 64.

The game has been taken over by a new company set up by Matthew Smith — the author of the Spectrum version. His Software Projects company will now be marketing the game.

When the 64 version goes on sale, Software Projects will be

announcing details of a competition, with a super prize for the first person to complete all the levels of the game.

Conversions from Spectrum to 64 are proving to be some of the most successful — and Software Projects are confident that the Commodore version of Miner Willy's adventures retains all the features of the Spectrum version.

Further good news for Willy fans is that the latest word coming out of Liverpool is that Manic Miner Part II is well into production.

SCOPE FOR ARCADE ACTION

SCOPE 64

If you like the sound of writing fast arcade games without the slightest knowledge of machine code, then read on.

Scope is a new, simple graphics programming language available for the Commodore 64. The game, its makers claim, is designed for writing fast arcade-style games without headaches.

SCOPE stands for Simple Compilation of Plain English, which gives a clue to why the programs run so fast. The program is in fact a very sophisticated com-

piler. The beauty of Scope is that it allows you to enter your game ideas in plain English words which it then miraculously compiles into machine code instructions.

The makers of the game stress that Scope was specifically designed as a graphics language to create games comparable with professionally produced software! Even the youngest of children can use it with ease.

Scope is produced by Interactive Software for the Commodore 64 and should retail at around

£14.95.

BASIL AND THE BUBBLE MONSTERS

BUBBLE TROUBLE

Bubble Trouble will have you foaming at the mouth as you battle against mutant bath bubbles in a new game for the ZX Spectrum.

The game puts you in the striped shirt of Basil the Burglar, a small time crook who's taking his chances against the infamous bubble monsters guarding an ancient, treasure-filled tomb.

Basil has over fifty labyrinths to choose from, but he can only

wander round a maze for one minute picking up valuable crowns, jewel-encrusted swords and precious stones before he has to leave the maze.

Time isn't the only thing against Burglar Basil — bouncing bubble monsters attack Basil from all sides. You must help Basil to avoid being drowned in the suds and collect as much of the tomb's treasure as you can.

The game has three different levels of difficulties, fifty different mazes, fine scrolling graphics and sound effects and is available from Arcade Software for the ZX Spectrum 48k for £5.50.

SINISTER PRECIOUS STONES

DOOMSDAY CASTLE

Saving the universe is never easy, especially when your adversaries include the phenomenally nasty Googly Bird. The Googly Bird is one of the many galactic ghouls you'll meet in Doomsday Castle, a new real time graphical adventure game for the ZX Spectrum.

The hero of the game is Ziggy — remember him from Fantasy's other smash hit game, the Pyramid?

Doomsday Castle is set in a universe ruled by Scarthax, the most evil being in the galaxy's history. Scarthax has searched the universe and collected the six ancient stones of life force. Now that he has brought them together under his control, he wields a power for evil far greater than the most horrifying nightmare could imagine.

The stones' awesome power is sending waves of corruption to every corner of the cosmos. Your task is to guide Ziggy through the Doomsday castle, attempt to wrest the stones away from Scarthax, and turn their power against their former master.

Doomsday Castle runs on a 48K Spectrum and is available from Fantasy Software costing £6.50.

G·A·M·E·S N·E·W·S

DUNGEONS IN DANGER ON ORIC?

RUNELORD

Hardened D&D addicts may look down their noses at 'upstart' computer adventure games. But a new game, Runelord, may

tape and then loaded into the game. This way a whole library of different roles can be made.

Runelord, like its board game namesake, is set in Celtic Britain. From here on, the usual Dungeons and Dragons' tactics of murder, arson and the odd bit of pillage take over. It sounds like good clean fun to us!

Runelord is available from Modular Concept Peripherals for the Oric 1 and costs £7.50.

shake their faith in D&D's supposed superiority.

Runelord is based on the role-playing fantasy game of the same name and it differs from most computer adventures in allowing you to develop certain characteristics of your chosen role. As in Dungeons and Dragons, each character has different quotas of wisdom, strength and dexterity. Runelord lets you create these for yourself, each one having its own particular strengths and weaknesses, good points and bad points. Furthermore, the game doesn't just consider aspects of the player's personality, but also how much equipment and experience each one has acquired during their 'lifetime'.

Once a role has been created — a warrior or magic user for instance — it can be saved on

HERE IS THE WEATHER FORECAST

KRIEGSPIEL

Weather forecasting becomes a vital part of military tactics for the commanders of tank warfare game Kriegspiel. An autumn offensive can suddenly grind to a halt as the landscape disappears below a blanket of snow or floods make waterways impassable.

Kriegspiel was first written by Ron Potkin on the Tandy TRS-80 in the late 70s and this early version even appeared in *Computer & Video Games*. Now Ron has utilised machine code and the Dragon's colours to bring

new life to the game.

The action takes place over four screens of map with two opposing armies of heavy tank divisions, light tank divisions and mine laying infantry, battling for supremacy over a landscape of mountains, rivers, forest and field.

It's a game for two players or one player against the computer and can provide a simple 30 minute onslaught as both sides rush to take the opposing capital, or it can be as tactical as chess.

The landscape offers different advantages to infantry and tanks and a good commander can use the lie of the land to boost his attacks.

Kriegspiel, available from Beyond Software, costs £6.95 for the Dragon 32 and can be played by keyboard or joystick.

FIRST OF FELIX IN THE FACTORY

FELIX

All those who received an Electron for Christmas won't be frustrated by a lack of games software in the New Year.

Most home computers in the past have been plagued with a 'dead area' for a few months after their launch, before the independent software houses got their acts together and started producing games in bulk.

But it looks like Electron owners, problems won't be finding software for their computer, but choosing between the games that are about to flood the market.

Two companies who are leading the way in Electron software are Acornsoft, the software division of Acorn computers, and Program Power, a company that specialises in BBC software.

Program Power have released a range of ten games for the Electron including conversions of some of their most successful BBC games like the best selling Killer Gorilla.

The company haven't stuck to just converting old games but have some original titles up their sleeves.

Felix in the Factory is the first in a series of Felix adventures that Program Power are planning. The game places you in the position of the industrious Felix who is in charge of a run down factory for the weekend.

The rusty old generator in the basement of the factory keeps running out of fuel and you have to help Felix refill it with fuel before the entire factory grinds to a halt and production stops.

Felix must negotiate the rickety old ladders and conveyer belts to reach the generator, but his progress is slowed by gremlins who inhabit the building when the workers have gone home.

Felix's only hope of getting past them is to find a pitchfork and knock the nasty gremlins off the gangway and stop them putting a spanner in the works.

Another hazard is the giant rat that scurries across the packages in the factory's corners. The only way to get rid of the rabid rodent is to jump up and grab the bag of poison hanging from the ceiling. Felix in the Factory is available from Leeds-based Program Power for the new Electron and is priced £7.95.

G·A·M·E·S N·E·W·S

QUASI WILL GIVE YOU THE HUMP!

HUNCHBACK

It's a few centuries since the legendary Quasimodo first attempted to save the fair Esmaralda, and carry her off to the sanctuary of the Notre Dame's famous castle tower.

But the hunchback has swung right back into the thick of the action. Notre Dame's booming chimes will ring out again as the world's best known bell ringer hits your TV screen in the unlikely guise of a video game hero.

Quasimodo's task is the same as ever, to save the beautiful Esmaralda from the clutches of the evil Archbishop and his cronies.

You must help the unfortunate cripple jump flaming barrels, swing across murky pits and avoid loyal knights ready to thrust a lance into Quasi's hunched shoulders.

The game is played against a scrolling background of the cathedral. Each level consists of 15 screenfuls of high speed action and is piled with more and more difficult obstacles for Quasimodo to overcome before he reaches his true love.

Hunchback is a direct copy of

the original arcade game of the same name and has been produced with full co-operation of the game's original manufacturers Century Electronics. It's the only official version available on any home computer.

Hunchback is available for the Sinclair Spectrum, Dragon 32, Commodore 64 and Oric computers in late December from the Manchester company, Ocean Software for £6.90.

favourite hobby is a spot of hot air ballooning. He has decided to go on a marathon flight to test out the brand new balloon he has just acquired

Like all great heroes Nathan Wigglesworth would never think of embarking on a trip of a lifetime without the help of a life long pal T. C. Barton.

WHEN THE BALLOON GOES UP . . .

CRAZY BALLOON

Around the world in 64k? Crazy Balloon certainly seems to make it possible on the Commodore 64.

Crazy Balloon takes you back to the age of romantic adventure where the sky's your limit and the far off horizon is your destination.

The game places you in the shoes of Nathan Wigglesworth, an eccentric explorer whose

Like Nathan, T.C. enjoys a great adventure and is quickly ready to take off with his old pal.

As Nathan and T.C. start their sojourn, the weather report is good but many obstacles lie in the way of the chums' expedition. You must help them manoeuvre the balloon over churches and skyscrapers.

Twenty-six dangerous flight levels have to be completed before the two can claim the title of the World's Greatest Aeronauts.

Crazy Balloon is available for the Commodore 64 and is joystick compatible. The game is produced by the newly formed company Software Projects and costs £7.95.

JOIN THE CLUB AND WIN A BADGE

RIVER RAID

America's top independent video game manufacturer, Activision, have just released versions of two of their most successful games for the Atari 400/800.

River Raid is a super fast, all action, scrolling shoot-'em-up. You are flying a mission up river to destroy all enemy shipping and bridges in hostile terrain.

Activision will reward anyone who can score a million points with a River Raiders Club badge.

Also converted for the Atari home computers is the hit VCS game Kaboom. This challenges you to catch all the bombs being hurled by the mad bomber before they hit the ground and explode.

The games are in the shops now at £29.95.

MERCENARY SAVES THE GALAXY!

NEOCLYPS

The galaxy is facing the most dire crisis in its history. Neoclyps, a remote planet and a member of the Colonial Federation has been invaded. As the universe's foremost galactic mercenary, you must liberate the inhabitants of Neoclyps from the alien dictators.

The invaders have set up a defence system of radar towers to detect any ships entering the planet's atmosphere. Your ship has been designed to withstand 12 collisions with the towers or with aggressive alien guards.

The game is written in a 100% machine code and includes a joystick option.

Neoclyps is available from Coventry-based PSS for the Commodore 64 and costs £7.95.

The No.1 Football Game

ZX81 16K, ZX Spectrum 48K
BBC and Oric versions coming soon!

Football Manager

Designed by Kevin Toms

This outstanding game of skill and strategy is now widely available and you can join the many thousands of satisfied customers who have purchased the game. This is no five minute wonder – you will be playing this game for hours over many weeks (we know – our customers tell us!).

Kevin Toms

Some of the features of the game:–

- ★ Matches in 3D graphics
- ★ Transfer market
- ★ Promotion and relegation
- ★ F.A. Cup matches
- ★ Injury problems
- ★ Full league tables
- ★ Four Divisions
- ★ Pick your own team for each match
- ★ As many seasons as you like
- ★ Managerial rating
- ★ 7 skill levels
- ★ Save game facility

Comments about the game from press and our customers

"FOOTBALL MANAGER is the best game I have yet seen on the Spectrum and my personal favourite of all the games on any micro ... To the ordinary person it is an excellent view of what can be done in the field of computer games ... The crowning glory of this game is the short set pieces of match highlights which show little stick men running around a pitch, shooting, defending and scoring ... It is a compulsive game but people who cannot take game sessions of 9 hours or so, which happened on one happy Sunday, will be grateful to know that there is a 'save to tape' option. FOOTBALL MANAGER has everything it could ... The

originator, Addictive Games, certainly deserve the name." Rating: 19/20 (Practical Computing – August 1983).

"When I first received this game I spent the best part of the weekend playing it. Since then I have returned to it more often than any other. The truly addictive quality of this game is the remarkable way it mirrors the real football manager's problems ... "(Personal Computer Games – Summer 1983)

"It's my own fault you *did* warn me – I am totally and completely hooked on FOOTBALL MANAGER." (Mr. A. Wright – Lancashire.)

"It is by far the best software game that I have seen for the Spectrum." (Mr. N. Lincoln – Surrey.)

"I congratulate you for a marvellous game which keeps the player enthralled." (Mr. N. Creasey – Gerrard's Cross.)

"I am writing to say what a great game it is. I have spent over 45 hours on it." (Mr. D. Fearn – Gloucestershire.)

"Your FOOTBALL MANAGER game is terrific." (Mr. N. Cumming – West Bromwich.)

IMPRESSIVE ALL ACTION ADVENTURE

FOUR GATES

If you're after a good game for that Vic you got for Christmas then this is certainly worth a look.

Four Gates to Freedom is another in the Action/Adventure series from Phoenix software. The game comes on two separate cassettes with an arcade-type action game on one and an adventure on the other.

The catch is that you need a password to load the adventure, and you can only get this by reaching the highest level on the action game!

The action part of Four Gates is impressive. There is a wall at the top of the screen which is built in five-bar gate fashion. Above that is another wall, and beyond that are the four gates to freedom.

The idea is to break through both walls in Breakout style, avoiding aliens and also the falling debris from the wall.

Between the two walls lurks an extra meany, so the game gets harder after you've created a gap in the first barrier, as he escapes through the hole. He cannot be destroyed with your cannon.

The action in the game is very fast. If your trigger finger can handle it, you can fire quite a few times a second.

The graphics are not superb, but are adequate for the game.

Overall, it's great and very fast. But it may take some time, not to mention eye strain, to reach the highest level and get the password for the adventure.

Once you have the password — no I didn't finish the action but I've got friends at Phoenix — you can load the adventure.

When it has loaded and the password has been entered, the title screen welcomes you and challenges you to 'solve' the adventure! You'd think that they could check the spelling.

You start off outside a metal gate and your only exit is South. Problem is that you need a password to get through the exit, which I hadn't been given.

Not only do you get the loading code from the action game, you also get quite a few clues flashed on the screen during play. One of these, I assume, is the password to get through the gate.

R·E·V·I·E·W·S

If you'd like to try this for yourself, you'll need a Vic with a 16k Ram pack. Phoenix Software is based in Pinner — you'll pay £9.95 for the twin-pack, which can't be bad.

PARALYSED BY PEPPER!

MR WIMPY

If you think that a game called Mr Wimpy must mean another version of Burgertime, then you're not wrong. But you're not exactly right, either.

The opening screen is original and quite good, but the remaining frames are just another version of Burgertime.

The first task in the game involves moving the ingredients from one side of the screen to another. You have to collect a tray and gather the cheese, ham and bun while avoiding Waldo the burger thief, and a group of flying manhole covers. No, I don't get it either!

Once you've gathered all the bits and pieces you get to the other screen, which is a pretty accurate copy of the Burgertime theme. The chef is replaced by Mr Wimpy, the logo used in their advertising. You are pursued by an egg, spoon and a sausage and you still have your supply of pepper.

The original Burgertime was written by Data East and was licensed for home use by Mattel, who produced a cartridge for the Intellivision.

The object is to build up the burgers at the bottom of the screen by walking over the ingredients so that they fall down a level.

If you pick up the ice cream or the cup of coffee then you get extra shakes of pepper, which is

used to paralyse an enemy temporarily.

Burgertime is the same game, whatever you call it. But this is probably the best version around for the Spectrum.

It runs on a 48k machine and is available from Ocean Software for £5.90. It's a shame that they couldn't call it by its real name.

CRACK SHOT CLONES!

CYBERTRON

Searching a derelict castle for treasures is brought up-to-date with this program.

Before entering each level of the castle, you are told which treasures you must look for and you then wander round the 16 rooms in search of them. As you pass over the treasure, it will appear at the bottom of the screen to remind you that it has been found.

Once you have all the loot, you then have to find the room with the safe in it. Touching the safe will lock away all the treasure and you are then moved up to the next level.

Obviously in such a game there will be enemies after your blood. On level one, says the inlay card, your only adversaries are the Spinners. Personally, I can't see what's wrong with them. (Did you see their Christmas show?) On higher levels, you are also pestered by Clones and Cyber droids. These have more person-seeking intelligence and can also fire pretty fast!

Control is via the keyboard or joystick, but the keys were not laid out too well. A and Z move up and down while ";" and "." move left and right. The "M" key

is used to fire, which I found to be too close to left and right. A joystick would have solved this problem. Furthermore, the break and escape keys are not disabled, as I managed to crash the program by pressing them.

Trying to re-run the program I typed OLD. I was amazed to find that my job was then made unnecessary, as the program reviewed itself. Up came the words "Bad Program"! To be fair, though, the game is quite well written. I enjoyed playing it, but I don't think that I'd come back to it too often.

Cybertron Mission runs on a BBC B and comes from Program Power. It'll cost you £7.95.

continued from page 29

Vic one runs slightly faster than the ZX.

The Vic will accept standard Atari-type joysticks, and these can be used in the game, although the keyboard can be used instead. What's more, the superb graphics of the Spectrum version have been captured in the same detail on the Commodore machine and the screen is one of the best that I have seen — all in 8K, too.

One talked-about problem from the Spectrum was the so-called bug in screen four. This, says Ultimate, was deliberate to allow poor players to achieve a high score. Anyway, that problem doesn't arise now, as that screen was one of those which was removed for the Vic. So it seems that Ultimate thinks Spectrum owners are more likely to be poor players than Vic owners!

A great game for one or two players, and well worth £5.50.

FIGHTING FATAL FUNGUS

SS ACHILLES

You'll have to race against time to save your planet's most valued artifacts from the doomed star cruiser SS Achilles. The SS Achilles has been attacked by a strange space fungus which is slowly eating its way through the ship's maze of corridors.

The alien intruder is indestructible and your only hope of saving your culture's most treasured relics is to slow its progress through the ship, to give you enough time to escape through

the shuttle craft with your cargo to earth.

The game starts by showing a very impressive graphic display of SS Achilles under which the game prompts the player to choose one of five difficulty levels, ranging from inept to expert.

You are placed inside an android protection suit to help you survive the harsh environmental conditions in the ship. Moving the droid into the walls or any grey object damages the robot's integrity level, shown at the bottom of the screen, together with the droid's remaining power supply. The level of the droid's integrity becomes more and more important as the game progresses and a lot of skill is needed to move the robot around the ship without hitting the walls or running into the fungus.

The growth of the fungus can be viewed by stepping into one of the tele-screens scattered around Achilles. This prints up a map of the ship's interior, showing the areas inhabited by the alien in orange.

To complete the game, you must pick up all the objects lying around the ship and deposit them in the shuttles loading bay. There are four different types, but the droid can only carry one particular object at a time. If and when you've collected all the objects, you can abandon the ship in the escape shuttle.

SS Achilles is a very addictive and challenging game. The graphics are good and the animation is amongst the best I have seen on the Atari. My only criticism of SS Achilles is that the game is only available on disc.

SS Achilles is available from Beyond Software for the Atari 400/800 and costs £19.95.

ASTRAL PLAIN ACTION!

DEFENSE FORCE

It's all action on the Oric as you career through space with lasers blazing in an attempt to save the humans from an alien invasion.

Attack! The humans are being captured! A Vultura rapidly descends on its prey with the aim of carrying him off into space. Making a rapid about-turn, you fly back in the opposite direction and blast the alien to the four corners of the galaxy. Luckily the humanoid is unharmed and falls gently back to earth.

Shoot-em-up fans will love Defense Force — with only a few variations, it's a faithful reproduction of the fast-moving, action-packed arcade hit Defender.

The aim of the game is to get through 20 waves of aliens and prevent the humans from being kidnapped. With up to 16 different video nasties on your tail, life becomes pretty hectic and you'll find that being able to fly both backwards and forwards a useful addition to the game.

Once all the humans have been captured, you enter the Astral Plain and beset with vicious nasties, your only chance of survival is to fight it out. Graphically very impressive, the Astral Plain gives the impression of flying into the depths of space away from the TV.

With the aid of a Star Map, it's possible to spot the swarms of aliens approaching before they've appeared on screen — so be prepared for waves of Assassins, Quantums and the dreaded Cybotroids if you don't want to lose a life. However if the pace becomes too much, a force field can be erected which will remain operational for six seconds — enough time to fly out of trouble!

There is an on/off sound function which I found especially

useful — for although the sound effects are great, they are really noisy and had me clapping my hands to my ears in horror. Thankfully it's possible to play a silent game with just as much fun. A beginners' option is also available for the absolute learner, but this soon becomes boring.

With its excellent graphics, Defense Force will bring hours of fun to the lives of trigger-happy arcade fans who want a fast game for their Oric.

Defense Force is available from Cambridge-based Tansoft and costs £7.95.

YOU'LL BE HAUNTED BY ATIC!

ATIC ATAC

Abandoned in the eerie, haunted castle you can only escape by finding the Golden Key.

The castle consists of a large number of rooms, each of which has between one and three doors. As you walk across a room and through a door, the screen clears and the new location is drawn. The program runs very fast and there is no delay while the redrawing takes place.

The quality of the graphics in this game is the best I've seen from a Spectrum. Ultimate has dispensed with some of the movement and sound routines which were shared by Jet Pac and Cookie, and have written some excellent replacements.

Movement is smooth, and user defined graphics are used to their limit to produce some amazing characters such as evil-looking witches complete with broomstick.

Control is via Kempston or AGF joysticks, or the four cursor keys. With four keys for direction, one to fire and one to pick up the objects, a joystick is really the only way to play.

As I said, the idea is to explore the rooms, collecting the objects and using them. For example, some doors may be locked and to open them you'll have to find the correct colour-coded key.

Scores are printed on a beautifully designed "parchment" scroll which runs down

continued on page 32

continued from page 31

the right hand side of the screen. This shows the number of lives left, and also a large stuffed turkey! If you come into contact with any of the nasties, the turkey sheds some of its meat and gradually turns to a pile of bones. When all the meat's gone, you lose a life! Now that's novel.

Apart from the keyboard control, Atic Atac must rate as the best yet from Ultimate. It runs on a 48k Spectrum and is well worth the £5.50 which you'll have to pay.

WARSHIPS OF GOR

ACHERON'S RAGE

If you're a fan of Asteroids then you'll probably like this version of the game for the Oric.

You've hyperspaced, says the cassette inlay, into a sector where scanners revealed no sentient life-forms. Suddenly... warships of the Gor are materialising all around you. In reality, though, it's an asteroids-type game.

The playing area consists of the whole screen, apart from a thin border and also a large shaded block in the middle. On the screen is your ship and a number of aliens, or Gor ships as Softek likes to call them. The idea is to destroy all of the Gor ships and then to move on to the next level. The block in the middle of the screen makes manoeuvring quite difficult, though.

There are three types of Gor ships. Some will try to ram you, some have the power to fire back, while others will lay mines. Running over one of these will result in your destruction.

There are four skill levels in the game. Even on level one I thought that the playing area was too small — there's just not enough room with all those aliens to manoeuvre your ship. You get three lives to start, and an extra one after clearing every six waves.

Control of the game is via the keyboard. There are five main controls — to rotate in two directions, fire, accelerate and brake — but you can't move and fire at the same time so a joystick option would be useful.

R·E·V·I·E·W·S

This is certainly not the best game that I've seen for the Oric, although the graphics are quite good in places. The Gor ships move very smoothly and flap their wings, but the player's ship rotates badly in large steps.

Sound effects are included, but are quite limited. There's one sound for firing and another for when the player's ship is destroyed. It's quite loud and there's no volume control, but you can turn it off completely if you want.

If you like this sort of game, then this is worth the money, but it's not one that I'd come back to very often. Acheron's Rage runs on a 48k Oric and costs £6.95.

BOUNCING POLICEMEN?

DAREDEVIL DENNIS

Dennis the Menace, the famous movie stuntman revs up his trials bike as he gets ready for the most difficult stunts of his short life.

Unfortunately for Daredevil Dennis, the film director won't tolerate failure, so if he fails more than three times at any stunt he's fired — which is probably just as well as poor old Dennis lands on his head each time he falls off and is probably suffering from severe brain damage!

There are six screens altogether. Dennis starts off by leaping houses and trees on the first screen and moves quickly onto water where he rides a wet-bike. The snow slopes are next — slightly more difficult as they are very slippery — with the remaining three featuring low-flying helicopters and gaps in the road. Your jumps have to be well timed if you want to save Dennis from going up in flames.

The first three screens are easily mastered on the first difficulty level, while the remaining five levels range from Experienced to Ace where you'll really have to struggle to keep Dennis on his bike. I had several nasty encounters with bouncing policemen and decided to stay on the novice level!

A lively tune is played which livens up the dreary few minutes while the game is loading and the graphics are very detailed and colourful. However, I felt the game lacked that elusive addictive quality which would make it a winner.

The game is controlled by the shift key which acts as a throttle, the return key which acts as the brake and the space bar which is used for jumping — very simplistic controls and a game better suited to the younger age groups.

Daredevil Dennis is available from London-based Visions for the BBC Model B at £7.95.

WAYS TO WIN THE WAR!

STONKERS

Golly, chaps. Spiffing game, what? These Imagine chappies have really got it right this time.

Yes, it's the latest release from Imagine. In one giant leap for a software house, Eugene and Co. have released a war-type strategy game but have kept those pretty arcade type graphics. Those graphics are, in fact, well designed. But I don't think they really live up to Imagine's claim that they are as much as is technically possible on the machine. For my money I prefer Ultimate. Whoops, sorry!

Anyway, chaps, this is a war

strategy game. There are no fast moving meanies to zap; instead you have to move your tanks and cannons to clever positions and make sure that you are near enough to the supply ship to get some cargo when it unloads.

If all this sounds very vague and I seem to give the impression that I couldn't get in to the game very far, then you're right. The whole idea is pretty complicated and I actually spent the best part of a whole day studying the instructions in front of a Spectrum. For all my gallant efforts, I succeeded in drowning my entire regiment in the sea.

When opposing forces meet, whether by clever deployment or by accident, they will engage in combat. There's a predetermined hierarchy of which battalions are more powerful than others. Your forces will change colour if they're engaged in combat.

During play, the screen shows the playing area on a small scale. There's a 2-character wide cursor which you can move to any point and then expand that 2-character piece to fill the whole screen. It's really quite impressive. Anything which happens to be moving will do so whether you happen to be there watching or not.

The object is to destroy the enemy positions and to occupy their HQ. But I feel that this is going to take someone a long time. If you're the sort of person who likes to be able to get straight into a game once it's loaded, then this is not for you.

However, if you're fed up with zapping everything in sight from Space Invaders to Mutant Telephones and man-eating toilets then this will be good value.

Stonkers is from Imagine and runs on a 48K Spectrum. It costs £5.50

ATARISOFT™

More than fun and games!

FIRST STEPS with the Mr. Men

by Primer Educational Software

The ever-popular Mr. Men help prepare young children for reading with four simple and absorbing games designed to exercise essential skills as well as entertain.

An easy-to-use, colour-coded key guide is included with an illustrated introductory

book, featuring the Mr. Men. For ages 4 to 8 years. Available now on cassette for the BBC B, Spectrum 48K and Electron. **£8.95**

QUICK THINKING!

by Widgeit Software

Two mind-stretching, space-age games to test mental arithmetic and nimble fingers.

In **Sum Vaders** alien robots invade the earth. Only quick thinking and fast reactions can prevent them. Several levels of difficulty and a two-player game with a handicap option make Sum Vaders equally testing for all family members, from 8 years to adult.

Robot Tables challenges the young player to make a series of perfect robots.

Knowing your multiplication tables is the key to controlling the robot-making machine. With a learning mode and a testing mode, Robot Tables is a fun way

for early learners, and more advanced children, to master an important and often neglected skill.

Available now on cassette for the Spectrum 48K, Commodore 64, BBC B and Electron. **£6.95**

CAESAR THE CAT

by Andromeda Software

Meet Caesar, a cheeky young cat on duty in a well-stocked larder. He's kept busy chasing a gang of hungry mice eating the family's food. Playing against the clock, you guide Caesar along crowded shelves to pounce on the mice.

A fast, colourful, all-action, arcade-style game with catchy music and a best-score record. Challenging for high-scoring arcade addicts as well as great fun to play for the novice.

Available on cassette for the Commodore 64 **£8.95**

Prices include VAT and post and packaging. MIRRORSOFT programs are available from selected branches of W.H. Smith and Boots, and other leading software stockists.

Trade enquiries welcome: phone 01-822 3580

Thinking of buying a chess program for your micro? Don't know what to expect or which one to buy? Then read on . . . Whether you're a chess fanatic or you just know the rules, you will probably at some time want to set a chess program for your home computer. With the great number of programs now available, it may be a difficult decision to choose the best one for your micro. In this article Chess programmer Martin Bryant looks at the standard of play and the features you can expect from the best modern home computer chess programs.

Standard of play

The very best programs can now play at a fairly good club level, from around 1600 to 1800 ELO (125 to 150 BCF). The standard of play can vary greatly from game to game depending on the type of position encountered and the stage of the game. Modern programs also usually have a much fuller understanding of the more obscure rules of chess such as underpromotions, draws by repetition, draws by the fifty move rule and chess clocks.

Features

Here's what you should look for in a good chess program. The most recent programs are provided with many more features of a much higher quality than their older counterparts, such as:

- Move entry by a cursor positioning method. Why should people have to turn their thoughts into an algebraic form, just because it's easier for the program to understand? The cursor method allows you to 'move' the piece on the board, more like a real chess game. The best programs can accept both methods.

COMPUTER CHESS

- The ability to step backwards or forwards through the entire game. Older programs would allow you to take back only a couple of moves, but with new techniques the whole game record can be stored and scanned with small memory overhead.

- The orientation of the board should be reversible. That is the board should be displayable with white or black at the bottom of the screen. This allows you to play black "up" the board, like a real chess game, instead of having to reverse your way of looking at it.

Several "modes" of play can add a great deal of flexibility to a program. The old fashioned eight "levels" can be vastly improved upon these days. Some of the sensible "modes" are:

- (i) "Tournament" mode: Full tournament parameters can be set up, to make the program play within any specified time limit. An easy to use version of the full mode is helpful as well, where you can just specify the average move time you wish the program to take. This can range from one second to 99 hours, effectively providing thousands of "levels". The program automatically adjusts its "lookahead", to play within the required time.

- (ii) "All the moves" mode: Chess clocks are used, where you must play all the moves of the game within a specified game time. If you play too slowly, you lose on time! Club players often use this method in "five-minute" games where both players have five minutes each to play all their moves.

- (iii) "Problem" mode: The ability to solve chess problems of the type in many newspapers is good. Beware however of the programs which claim they can solve mates in five or more, but then take a week or so to do it! If the program averages more than a few seconds on any mate in two it is likely to be horribly slow on deeper mates.

- (iv) "Losing" and "Equal" modes: Many

players can't beat the programs on their lowest settings. These modes allow the program to quite deliberately try not to win! Instead it either tries to gradually lose or stay roughly level. These modes can be of enormous help to the beginner or very weak player. As the player improves, the program magically improves with him, always challenging him, but not totally smashing him so he just gives up.

The ability to quickly and easily set up different positions is essential. The program should also check that you don't try to play on with an illegal board position. For example, having P's on the first rank, more than one king for each side etc.

Which Program?

The best programs for playing strength are usually the most recently released. Any program which has been around for over a year without an update, is probably totally outdated as far as its playing strength goes. A year is a long time in computer chess, as can be seen from the results of programs which compete in recognised tournaments, such as the European Championships at the PCW show each year.

A chess programmer may achieve glory one year, but has to work very hard on new ideas/techniques to improve the program, so as not to be leapfrogged by other programs by the following year.

You should try to go for recognised quality programs, which have competed in many tournaments. There are several reasons for this. Some of the programs have obviously proved themselves by actually winning some of these tournaments.

Others will have at least performed reasonably well. The ones that don't enter at all, would probably be smashed out of sight! Also the programmers behind these programs are dedicated and

QUE-MATES . . .

knowledgeable enough to really write a quality program, rather than just another software "rip-off" as are many chess programs. The same arguments really apply to the features as well. A "real" chess program will have most of the best features as a matter of course.

Reviews

I'll now take a brief look at two programs which are probably the best available. They are White-Knight Mark II for the BBC Micro and Cyrus I.S. Chess for the Spectrum.

Cyrus was originally written in 1981 by Richard Lang and won the European Championships in the same year. It has competed in several tournaments since, with varying success and has been adapted for several micros.

The Spectrum model is not the latest version of the program, but can still beat almost all other programs. It comes in 16k and 48k versions. The 48k version has more features and also uses an openings book. It contains a wide range of features, including set-up position, saving to tape, printer output and full game take-back. The bottom of the screen shows the various features available as single letter commands.

The display is clear and the programs cursor move entry easy to use. It allows user underpromotions, understands draws by the fifty move rule and some draws by repetition. It has eight levels and can solve problems up to three moves ahead.

White-Knight was originally written in 1977. Mark II won the home computer section of the European Championships in 1983. It is certainly the strongest home computer program available at the moment.

It runs on the BBC model B and like Cyrus, comes with several excellent features, including set up position, whole game takeback/replay, orientation, play-self, blindfold and even volume control.

When it computes its move, it displays the best line it has found so far in its search. This can be used to provide a "hint" move as well as an indication as to what "White-Knight has "seen". Again the display is very clear and the program easy to use. You can use cursor positioning move entry or algebraic notation.

The program can easily be set to play within any average move time you require of it, thus providing thousands of potential "levels". It can also solve mates up to five moves ahead. Its problem solving speed is phenomenal. It examines around 1,200 positions each second and when compared to the Program Power chess program was found to be around 200 (yes, two hundred) times as fast!

It was recently used in a study of several hundred chess problems and found that a dozen of the original problems were in fact in error!

In a series of sixteen test games between the two programs on various levels, White-Knight beat Cyrus I.S. Chess by twelve games to four.

For other micros there is a wide range from fairly good to appalling programs. Cyrus is also available on the Dragon. Not as good as the Spectrum version but still a good buy. White-Knight is soon to be released on the Electron.

The Atari cartridge I tried was horrible and at £25 has got to be one to miss. For the Commodore 64 comes the Grand-Master. It didn't offer many real features and I beat it twice with no real trouble and wasn't very impressed. At £15 I would also give it a miss.

A new program called Collosus, which won second amateur prize at the European Championships is soon to be released on the CBM 64 and Atari micros. This program promises to be one of the best around. For the Apple, Sargon 2 has had its day, but Sargon 3 is now available.

COMPUTER CHESS COMPETITION

BBC Publishers are offering a super prize to the lucky winners of our Computer Class Competition — three presentation copies of White-Knight, autographed by the author.

All you have to do is answer the following questions about computer chess. So have a go at winning yourself one of the best chess programs around!

(1) What was the name of the computer chess program which won the first Computer World Chess Championships in 1974? Was it:

(a) CHAOS (b) KAISSA (c) CHESS 4.0 or (d) OSTRICH?

(2) What processor did the original Cyrus program run on?

(3) Which program won the 1982 European Micro-Computer Chess Championships?

(4) The fastest chess program in the world, called BELLE, uses special hardware to achieve its phenomenal speed. Approximately how many positions per second can BELLE examine? Is it (a) 500 (b) 8,000 (c) 75,000 (d) 160,000 (e) 470,000 or (f) 2,000,000?

(5) Describe a new feature which you would like to see included in the next generation of chess programs.

You'll probably have to be a professional chess programmer to answer all these questions, but the competition isn't open to them. Just answer as many as you can. In the event of a tie, the answers to question five will be used to decide the winner. Closing date for entries is February 16th and the usual C&VG competition rules apply. Please send your answers, on a postcard, to *Computer and Video Games*, Computer Chess Competition, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

WORLD

MEET THE VIDEO GAME SUPERSTAR

Activision, one of America's youngest video game success stories, first made its mark on the industry four years ago with games like Dragster and Fishing Derby. Since then there has been no holding them back and Activision have created a string of popular titles which have won them a place among the frontrunners in this highly competitive field.

I met David at one of London's top hotels, where he was happily tucking into a take-away lunch of some rather soggy looking hamburgers and chips. He explained this away by stating a preference for hamburgers rather than English food! Perhaps it made him feel a little less homesick!

David first became interested in video games as a teenager when he visited arcades to play Pinball, but he added: "I soon realised that my interests lay in electronics and computing" About eight years ago he started to program his own games in an attempt to forge a career in the industry.

Since then David has produced many games for Activision and has certainly made his mark.

One game which earned him instant recognition as a top performer was Pitfall, which was voted 1983's Best Game of the Year in the States. In fact you could say that Pitfall made David Crane a video-game superstar.

The secret of a good game should combine realistic graphics with instant playability, a level of addictiveness and make full use of the machine's capabilities.

"When designing a game, you've got two choices — sports games or arcade type games. Sports games are easier in a way to design in that there are set rules to work to, whereas there are no rules governing the design of an arcade type game. The format is entirely up to the designer." David described how two of his best games developed.

David first started writing Decathlon — a sports game which has recently been released — some time ago. The first event is the 100m dash so he started off by programming a little man to run from the left to the right of

David Crane, a 29 year-old, 6'5" giant is one of the leading lights behind Activision's success in the highly competitive video games industry.

Activision, which was formed about four years ago, owes its outstanding success to the programming prowess of games designers like David.

During a flying visit to the UK, David took time out from his busy schedule to let *Computer & Video Games* writer Clare Edgeley into the secrets of games programming and his own particular brand of success.

the screen, the screen then scrolls forwards showing the athlete still running to reach his goal.

Unfortunately, Decathlon originally had to be shelved, as David couldn't fit all ten events into the memory space available to him at that time.

Turning to the idea of an arcade game, he decided to start in exactly the same way as Decathlon — a little man running from one side of the screen to the other. And so the idea for Pitfall was conceived.

"I didn't have a preconceived idea of how Pitfall would turn out, I just added objects off the top of my head like pits, vines, ladders leading into the pits and the odd scorpion until I ran out of memory.

"Pitfall was a difficult game to design as I tried to add a level of complexity to every step."

After completing Pitfall, a way was found to double the program size for Activision cartridges and David was able to complete Decathlon — an Olympian feat of

programming in which you've got to compete in screen versions of all ten events of the real life Decathlon.

Unlike other video games companies who employ a team of programmers to work on one game, Activision give each programmer sole responsibility for one game, from the initial concept of the idea through to the final product.

A team of five to six designers work in one room in an atmosphere which David finds very "supportive". In this creative atmosphere there is an "instant feedback and recognition in the quality of a game and a constant exchange of ideas."

The programming time for each game is somewhere between six months to a year. Typically, Pitfall took some 500-700 programming hours to complete over a period of six to seven months, while Decathlon was completed in just over a year.

However, games used to take longer to develop due to the graphics. "Originally we started

EXPANDING COLECOVISION

ColecoVision system owners will now have access to the biggest video games cartridge library available, thanks to the soon-to-be-released Coleco Expansion Module No. 1!

This plug-in module enables Coleco owners to use Atari 2600 cartridges with their system — opening up whole new vistas of video games playing.

Legal wrangles have prevented the module reaching the streets for some time — but it should be widely available by now and will cost around £59.00.

Once the Coleco owner has shelled out for the expander, he

or she can use any of the large range of games produced by and for the Atari VCS system. The rather awkward Coleco controllers must still be used but, for games that need the Atari paddle controllers, Coleco owners will have to find someone with an Atari system!

The expander is good news for Atari owners who want to upgrade to a Coleco — but were afraid they'd have to junk all those expensive Atari cartridges. Combine the high-resolution Coleco cartridges with the module and you really have got a super system!

off by plotting characters and objects in coloured squares on graph paper and then doing the conversions into machine code. If we weren't satisfied, we would have to return to the graph paper and start again."

This time-consuming exercise was solved by David who developed a gadget which enables the programmers to draw straight onto the screen at four times the real size. Once the programmer is satisfied with the finished product, it is automatically converted into machine code and stored in the memory. "It's approximately 80% faster using this method."

One of the passwords to the programmers' success are the key words: program size, execution time and storage memory. "When programming, you have to trade within these three constraints." For instance, if the programmer needs more memory, then either the program size or execution time will have to be cut down.

Activision have recently moved into the home computer market with River Raid and Kaboom for the Atari 400/800. I asked David about Activision's plans for the future. "Four years ago, our plan was to make a quality name in video games and once that name was established — to move with the industry. We are following a very well thought out plan."

David wasn't giving any secrets away and wouldn't say what was to follow River Raid and Kaboom, although I have been assured that more titles are to be announced shortly.

David tends to put in about four working hours a day at the office. "It's impossible to come in at say 9.30 am and expect ideas to flow for the next six to seven hours."

However, David's got all the necessary equipment at home and can work from there if a flash of inspiration hits him.

Pride in his work also shows in his personal life. David drives around in a car with customised number plates — you've guessed it — PITFALL!

THE VIDEO PROFESSOR GOES ON PITFALL SAFARI

Welcome to the second of Professor Video's lectures, packed with useful hints, tips and strategies which help you beat the hot home video games. This time he's taking a look at the ever popular Pitfall, written by David Crane, Activision's ace designer — who we interview elsewhere on these pages. Over to you Professor!

Oh! I wasn't quite ready for you. Sorry! Right, it's Pitfall isn't it. Yes. Pitfall... now let me get my notes together. Ah yes! Here we go.

like rolling logs, forest fires, jungle lakes and the dreaded tar pits! Some of the lakes and pools disappear and reappear mysteriously just when poor old Harry least expects it!

Harry has just 20 minutes to find the 32 lost treasures of Enarc — and only three precious lives.

The key to winning at Pitfall is knowing how to use the underground passageways which are hidden under the jungle. Some of these passageways are dead ends — but others provide useful short cuts to the treasure. One

underground scene is worth three above ground screens — so you can see how much time you'll save by working out the best short cuts.

Here's a couple of short cut hints. If you take the ladder down on screen 15 — moving right from the start point — and jog along jumping five scorpions on the way — you'll come up in screen 19 having missed out four above ground crocodile screens. The crocs are your most dangerous enemy. More about them later!

Crocodiles are Harry's greatest enemy!

Unfortunately by taking this route you miss out a gold bar. But when you learn that you'll discover six different treasures between screens 41-57, this strategy doesn't seem quite so bad after all! Another shortcut starts in screen 13 — again moving right from the start — this will take you to screen 19 — again avoiding a screenful of crocs!

Those crocodiles will perhaps prove to be your deadliest foe.

So here's how to deal with them when you are faced with a screen which doesn't offer you the option of grabbing a vine and swinging over their gaping jaws. There are three of the reptiles in each screen.

Timing is all important. Wait until the first crocodile's jaws clamp snap shut then jump Harry onto his snout, quickly moving him to a spot behind the beast's jaws.

Now the crocs will open their jaws again displaying a fine set of sharp white teeth. But don't panic. Wait until their jaws close again and jump onto the second crocodile — repeating the quick step to behind his jaws. The third croc is dealt with in the same manner — but jump off quick and run to the next screen.

You can move left or right from Harry's start point. Moving right you come across more treasures earlier in the game. But by running left the rolling logs don't pose a hazard you can run along with them in the same direction.

TRY GETTING IT TAPED!

Hello! This is Professor Video calling! Last issue I began my lectures in the art of video-gaming, bringing you tips to help you take on any sort of alien!

I've managed to get hold of five sets of new video releases called *How to Beat Home Video Games*, produced by Polygram Video. Each set consists of three tapes which deal in depth with strategies to beat games and give those cunning hints and tips to make your scores higher and higher.

Volume one of *How to Beat Home Video Games* deals with The Best Games home video classics like Space Invaders and Missile Command, Volume two looks at the *Hot New Games*, including Pitfall, E.T., Raiders of the Lost Ark and Lock n' Chase. Volume three deals with games for the new systems which bring arcade quality games into the home, like the Colecovision and the Vectrex.

After you've watched each of these hour long tapes you'll be able to pick up your joystick and play with the confidence of a video-grandmaster!

So, how do you get your hands on a set of these great tapes? It's as easy as this — just send me your favourite points-winning tips for your favourite video game. I'll pick out the top five tipsters and they will each receive a set of the tapes! Describe the strategies or sneaky moves that beat giant gorillas, defeat alien invaders or save Pacmen from the grasp of ghosts! And that's just a few suggestions!

Fill in the coupon below and attach it to your entry. Send it to Professor Video Contest, *Computer and Video Games*, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Closing date for this contest is February 16th — so get your tips in quick to beat the rush!

Over the tar pit but here come the snakes!

In Pitfall you control a little chap called Harry who is involved in a search for the lost treasure of Enarc. (Enarc/Crane, get-it?) During his search through the 255 screens of the game Harry will encounter many dangers of the animal kind, including scorpions, crocodiles and snakes.

There are other hazards too,

Don't forget my great video contest on this page!

ONLY **£29.95** EACH

INCLUDING

- μ** FREE SOUND GAME
- μ** COMPREHENSIVE MANUAL
- μ** DEMO CASSETTE

The final screen is quite difficult. Firstly you have to beware not to rush into it too quickly. If you do, your Smurf will walk right into a chain and you'll lose a life without even getting a crack at rescuing Smurfette. Unlike the Coleco original where you had to get your Smurf onto the top of a skull and then make a quick hop up to Smurfette, the Atari version adds a few extra hazards. You have to jump onto a chair, then onto the table, then another chair before finally being able to take that final leap onto Smurfette's shelf! All of which takes a bit of practice and good joystick control. If you play on skill level two, the castle bat will be attempting to thwart your rescue bid in this screen too!

The little character will soon win your heart — even though it does take a bit of time to master his leaps, hops and dodges. And CBS have obviously gone to a lot of trouble to ensure the VCS graphics match the Coleco's as closely as possible. Personally I liked this version better than the original — except it's still got that irritating little tune!

THE VERDICT

If you like cute games then Smurf is the ultimate in cuteness. But will the challenge last if you are a dedicated video player?

MEET THE ART MASTER

Now for something completely different. Last month we complained that the range of games for the Vectrex lacked variety. Milton Bradley have responded to this criticism by submitting a game for the jury's scrutiny which is completely unique — not only for the Vectrex, but unique amongst all video games systems.

The Art Master cartridge enables you to become a video artist for an afternoon. Designed to work in conjunction with the

Vectrex light pen, you can use Art Master to sketch, draw in dots and then connect them up, and even animate your drawings to create genuine cartoon animation.

The sketch function lets you enjoy the simple fun of doodling in light. You can copy pictures from books, write messages, or play noughts and crosses. The connect function lets you draw in dots. You can use this to create dot pictures and ask your friends to guess what they are before pressing the button to connect up the dots. Options are chosen by selecting choices from a menu using the light pen which you simply point at the function you require.

Although doodling in light is fun, the real attraction of this cartridge is the animate option. Although you cannot execute very sophisticated animation, you can do simple things like drawing a plant and making it grow, or make a stick man walk across the screen.

The Art Master cartridge comes complete with the light pen and an instruction booklet. In the shops now at around £30.00.

THE VERDICT

Adds a new dimension to your Vectrex.

PURE GOLD DECATHLON

Decathlon is the most exhausting video game ever to come up before the jury! You should have seen them when they came out to present the verdict — the foreman could hardly stand up!

The reason for all this tiredness is due to an entirely new innovation in videogaming — the shake-speed joystick.

It's not a new joystick, but a new technique in David Crane's — of Pitfall fame — latest game — Decathlon.

You control an athlete taking part in the famous Olympic ten-event contest. To make your man run forward you have to move your stick as fast as you can from left to right. The faster you shake it, the faster he moves.

Speed is essential and not just

to win the 100, 400, and 1500 metre races. You also need as much speed as you can muster to gain maximum height in the pole vault, high jump, and length in the long jump. Speed also enables you to gain momentum when throwing the javelin, discus, or putting the shot.

Your athlete has the advantage of a speedometer at the bottom of the screen, which measures his pace with a red "fuel level" style display. When he's at full pelt the line will shoot up to level six, and fall back to nil when stationary.

To jump or throw press the fire button. Some of the events are more fun than others — my personal favourites are the high jump and the hurdles.

This is a real winner of a game from Activision for the Atari VCS. Like the rest of the Activision games, if you get good enough at them you are rewarded. In Decathlon you can send off for a gold medal if you score over 10,000 points. Available now at £29.95.

THE VERDICT

This is your chance to go for gold. The most playable sports simulation for the VCS — for up to four players.

SUPERCOBRA SUPER GAME

Scrolling games are pretty thin on the ground for the Intellivision, so the arrival of Parker's Super Cobra was greeted with considerable excitement by the ladies and gentlemen of Joystick Jury.

The Scramble-type game from Konami was a significant hit in the arcades despite being slightly over shadowed by Scramble.

Now the game has been licensed by Parker Brothers and converted for home use on the Intellivision.

Four levels of scrolling, bombing, shooting action have been incorporated in the game for one or two players.

Piloting your chopper through enemy terrain you are attacked by ground to air missiles, and bouncing bombs.

You'll need all the skill you can muster as the enemy barrage intensifies and the caverns and cityscape through which you must negotiate your chopper get narrower and narrower. Needless to say the Intel disc controller doesn't make this any easier.

After 7,000 miles a squadron of alien flying saucers attack you with missile fire. Fuel dumps are now few and far between so you can't afford to miss hitting them to boost your supplies each and every time they appear.

At the end of the caverns and city skyline are three enormous skyscrapers with the words Konami and Parker Brothers written on them.

You are now near the end of your long flight and have to bomb one last ground installation to complete your mission.

It will take the most skilled video ace several attempts to crack this one.

THE VERDICT

Another good game for Parker Brothers — filling a gap in this type of scrolling shoot 'em up for the Intellivision. Available now at £29.95.

Next issue we're letting the members of our joystick jury loose on some hardware. Namely the joysticks themselves. We reckoned it was about time we took another look at the devices available to play games with — on home video game systems and home computers.

Our joystick jurors will be looking for the ultimate stick and at the same time will be bringing you up to date news of what's good in the world of sticks.

Also we'll be taking that look at laser-disc technology for the micro games player. That's using a few longer words to say what we promised you this month — but we just ran out of space this issue! We'll be taking a look into the future and predicting that you'll be able to play laser games on your home computer — games like the ones that are revolutionising the arcade industry right now!

The ultimate Crossword

The puzzle that needs a computer

Alien present the ultimate in word puzzles - 30 integrated crosswords which form a cube. All locations of this 3 dimensional puzzle are contained in the computer programme and you can complete any part you wish using the display on your TV and computer keyboard. Understanding all the relationships between the

crosswords is not possible without the computer but as you proceed you will discover new routes to help achieve the solution.

Features: Solution Store, Instant Display, Anagram Function, Character Location in memory.

This is a tough puzzle with a degree of difficulty - it's the ultimate but it's not impossible. Full instructions are included with the programme.

£1000 PRIZE

TIPSTERS PAY RISE

On seeing that Seamus is paying £10 for hints and tips which reach his Program Extra page, I've been saving up especially, and can now afford to do the same. So from now on, any letters, hints or other tips which make the Bug Hunter page will earn £10 for their authors.

And talking of Seamus, I'm currently training him in the art of Bug Hunting and I assure you that he's very nice to talk to. So next time you have a problem and I'm off fighting the Bugs, ask for him.

Here at C&VG we've come up with a clever idea to keep calls evenly distributed between myself and Seamus. Next time you have a problem, toss a coin before you telephone the office. If it's heads, ask for me and if it's tails then ask for Seamus! And if it lands on its side, phone the *Guinness Book of Records!* Now, back to the serious stuff.

GO FASTER DRAGONS

Dragon users will probably be aware that some Dragons can be speeded up simply with a POKE. Not all machines will allow this. But now, courtesy of Bug Hunter Enterprises (with a little help from Ahlan Davison-Grey, our Dragon software reviewer), here's why, or why not.

The central chip in the Dragon is a 6809E, where the E means that the chip gets all its timing signals from an external clock. The clock takes the form of a crystal, and the frequencies it produces are handled by another chip.

However, you can alter some of the registers in this last chip to alter the speed of the clock which drives the 6809. This has the effect of speeding up the computer so that some games will run twice their normal speed.

However, the 6809 was not designed to run at this speed, so don't be disappointed if yours doesn't. But, says Ahlan, the fact that so many do, is a tribute to Motorola, the manufacturer.

There is certainly nothing wrong with a Dragon which will not run at the higher speed.

CHEQUERED FLAG — PSION

James Alston from Bromley, Kent, writes to tell me of what he thinks is a bug in Chequered Flag. At the end of a race, he says, the computer is supposed to print the fastest lap time. In fact it prints up the time taken to complete the last lap. Has anyone else found this problem?

SPECTRUM GRAPHICS

We still get calls from Spectrum owners who have tried running games from our magazine but all the graphics come out as lower case letters.

This is because the game uses user-

defined graphics characters — that's what all those DATA lines are for.

The solution is simple. If, when typing a Spectrum program, you see a PRINT line with some lower case (small as opposed to CAPITAL) letters in speech marks, these are probably user-defined graphics and need to be entered in graphics mode.

To do this, type the line in as normal but when you get to the letters, enter graphics mode by typing CAPS-SHIFT with 9 to get a G cursor. Enter the characters and then get out of graphics mode by typing CAPS SHIFT with 9 again, and finish typing the line.

Write to me at Bug Hunter,
Computer and Video Games,
Durrant House, 8 Herbal Hill,
London, EC1R 5EJ. Or phone
me on 01-278-3881.

RABBIT RAID — SPECTRUM

If you managed to get the graphics correct in Rabbit Raid for the Spectrum from November's issue, then here's how to add some sound to it, courtesy of Ian Lewis from Lewes, East Sussex, who's the first to earn the new improved sum of £10 for his efforts.

On line 30 after RAIDd": and before GOSUB add BEEP .3,7: BEEP 1,.7:Beep .3,7 and at the end of line 330 add :BEEP .05,14.

Ian also suggests that a more realistic score system is made by changing line 250 from S=S+100 to S=S+250.

BY ROBERT SCHIFREEN

TIPS FOR THE ATARI

Here are a few useful tips for the Atari 400/600/800 from Christopher Roche of Sutton Coldfield.

To disable the break key, type POKE 16,64: POKE 53774,64. To disable the system reset button, try POKE 580,1. Now, if anyone presses it, the machine will erase all its memory including the program.

To destroy all variables try FOR X=PEEK(130)+256*PEEK(131) TO PEEK(132)+256*PEEK(133): POKE X,0:NEXT X.

After entering this, when LIST is typed the program will be listed in an unreadable form.

Also for Atari owners who keep having occasional errors with the 410 cassette recorder, try typing LPRINT before CSAVEing. This will produce a harmless error message, but just continue as normal. Thanks go to Donald Dods from West Lothian for this.

WILD WEST — VIC 20

Vic 20 owners may have been surprised by the Wild West program from December's issue. Even though the program needed a super expander cartridge, there were still three commands in there that the machine did not understand. The problem stemmed from the fact that we haven't saved up enough for a Vic printer yet, so I loaded it into our Pet to be listed.

However, because you can't get a super expander for a Pet, some of the tokens from the cassette were misinterpreted. I can now put you out of your anguish by revealing that BACKUP should be COLOUR, APPEND should really be SOUND while SYNTAX should actually read RJOY. You will now be able to get the game running perfectly.

I am still getting letters about bugs in professional software for micros. With Christmas just gone, there must be quite a few micro owners who have bought software with bugs in it.

The latest batch comes from Peter Lee of Ilford, Essex. Peter talks about problems with Psion's Flight Simulation, Ocean's Kong and has also told me of a problem in Valhalla which causes the program to return you to BASIC, able to LIST the game!

Well, that's it for another month. Don't forget that you can always talk to me about your computer problems on 01-278 3881. I've just had one of those posh answering machines fitted to the bug phone so if you are suddenly struck by a bug in the middle of the night or at the weekend you can leave me a message. You may also find that the machine is on during the day if I'm tied up with the dreaded Seventh Empire — someone has to type all your moves into the computer! — but leave me a message and I'll call you back.

Meet Alf, the Dustman. Not any ordinary dustman, but a hyper-intelligent mega-dustman. He has found himself in a spot of bovver with neither lawnmowers nor bears, but numerous tons of homicidal rubbish. To make life even more difficult (and confusing) his favourite beer is in hot pursuit! But there is help on the way, 'The friends of the Binless' try to assist Alf in overcoming the evil waste. SUMLOCK

MICROWARE

Trade enquiries welcome. Trade distribution nationwide ring 061-834 4233 for details.

The latest convert from video to pinball is that master of arcade abuse Q*Bert. Gottlieb have transferred the little chap from video-screen to pinball playfield in Q*Bert's Quest. And all Mr Q's mates have come along too. Coily, Ugg and Wrongway are still out to make life difficult for Q*Bert as he attempts to build his pyramid of coloured cubes.

By hitting one target — the monster's den — you'll release an extra ball, but the monsters escape too to cause Q*Bert more problems.

This machine has one irritating feature — the ball tends to stick around the upper chicane section of the playfield, hesitating at entrances to passageways — and this upsets the rhythm of play which generally is fast and furious.

For soccer fans Gottlieb offers Striker — the player takes on the pinball machine's team clad in yellow. The player gets the white strip! There are, of course, lots of references to penalties, free kicks, and corners — but the game is still fairly basic on its general playability. Gottlieb are still trying to find that one game that clicks with pinball fans — but to give them their due they are real triers!

Shock horror probe department. Can it be true? Matthew Broderick, the star of the movie War Games — the one about the computer-kid who almost starts World War Three by tapping into the American defence system with his home micro — doesn't really like computers! Talking to the London *Evening Standard* Matthew said: "Computers are not my thing at all. I don't like them and I don't understand them very well. I play video games, but even then I like pinball more."

Don't forget we're still interested in hearing your views on pinball and your high scores too.

Illustrations: Dorian Cross

HOLD ON — GOING DOWN, DOWN, DOWN . . .!

Pee-awww! Whee! Zzing! You'll have to duck, dodge and jump to escape the bullets of those shifty-eyed, trigger-happy security men.

Elevator Action certainly lives up to its title — your aim is to get from the top to the bottom of a top security defence building via lifts and escalators.

In your search for the top secret documents, you'll come up against a crew of lean, mean security cops, all toting pistols and ready to stop you at any cost from reaching your get-away car.

You'll have to keep your wits about you while you descend, as you stand a very good chance of getting shot.

On each floor is a series of closed doors, and a security man, or two, could leap out at any time blasting away. You carry a gun, as do all good trainees of 007, and you'll soon learn a few tricks to get past the baddies as you shoot up and down in the lifts.

Using your joystick to keep the lift between floors, wait until one of the baddies takes a pot shot at you and then quickly move to his level and shoot back. Because there is a small time delay while he reloads, you can be sure of a safe hit!

Trained by your government, you're also a karate expert. Using the jump button, you can leap off the lift and deliver a lethal, mind-blowing kick to your opponent which will effectively lay him out!

DONKEY KONG SWINGS BACK

DONKEY KONG

One of the latest games from Nintendo is Donkey Kong 3 and the new game introduces a likeable character, Stanley a gardener, who takes over where Mario left off — only this time he fends off the mad monkey to defend his greenhouse.

Armed only with a spray gun, Stanley chases Donkey Kong up the vines, keeping nasty insects and critters away from his flowers. Each pest has a personality of its own and Stanley must work fast and furiously to keep the creepies under control. If he is

ELEVATOR ACTION

Red doors appear at random and behind each one are secret documents which will earn you bonus points. If you go for the red doors, keep your eyes peeled as the guards will redouble their efforts to get you.

As you descend, the floors become wider, there are more doors, more security men and up to five lifts travelling up and down. A lot of skill is needed to

reach this stage, to dodge the rapid hail of fire and still get through to the next floor in one piece.

The building must resemble the Empire State in size as there seem to be an awful lot of levels to get through before you can make a run for it.

Elevator Action by Taito Corporation has a really original theme and I found it a pleasant change from the normal spaceage shoot-em-ups.

BLAZE THOSE STAR BANDITS!

STAR BLAZER

Scramble! Bandits at 3 o'clock! You push your joystick forward and enter the fray. The space city must be saved at all costs.

Weaving and dodging through the city's underground highways, you whiz round a sharp 90 degree bend to beat off an enemy attack of fighter space ships. You can't relax your vigilance for a second — more fighters are attacking from the left.

Leaving the city you swoop through the crags and peaks of a mountain range to enter a valley. With lasers firing, you steady your craft and take careful aim at a convoy of tanks.

Star Blazer by Sega is the official follow-up to Astron Belt but, unlike Astron Belt which is played entirely in space, you will be battling it out over many different terrains which include the interstellar airport, rocky mountains, oceans and deepest space.

The graphics are comparable with Astron Belt and are produced with the aid of Scanimate, a device which Sega claims creates ultra-realistic images. I tend to agree. The ocean seems to heave and roll and the fighters and enemy mothership are very life-like — they resemble the Empire's battle ships of Star Wars fame.

Arcade managers will now be able to convert the old Astron Belt machines to the new Star Blazer by using the conversion kit from Sega.

It's nail-biting stuff as your two lanky heroes almost career off the edge of a cliff in their efforts to escape the bunch of heavies in hot pursuit.

Aptly named, *Cliff Hanger* keeps you on your toes throughout this fun-packed game filled with bizarre and amusing scenes, including nerve-racking car and helicopter chases, a beautiful girl to rescue and a meeting with some sinister hooded gangsters.

With animated cartoon style graphics, comparable to *Dragon's Lair*, *Cliff Hanger* is one of the first games of its type to reach the UK. In the next few months we predict that laser disc games will become quite com-

SAVED BY A SAMURAI SWORD

CLIFF HANGER

mon in the arcades, but at the moment they are still very much a novelty.

The story begins with your two young lads escaping from a casino with bags of counterfeit money. They leap into their bubble car and a mad chase ensues through the busy streets.

Arriving in the country, they have a puncture and, whilst repairing this, they see the Mafia-like baddies roar past in a limousine chasing a helpless and beautiful blonde in a 2CV! Leaping to their feet, the boys pile into the bubble and give chase. A

helicopter chase follows and our intrepid heroes are rescued by the timely arrival of a samurai warrior in the city's sewers! As he brings the 'copter crashing to the ground with his sword, he utters a few memorable words in a very un-Japanese accent — "Once again I cut a worthless object"!!

A four-way joystick and feet and hand buttons control the action which is played out in cartoon-style graphics. Instructions like 'Stick' and 'Action' will flash

onto the screen and it's then up to you to decide in which direction to move and whether to use hands or feet. Each time you make a wrong move, you'll be told what you did wrong.

As in all laser disc games, there is a dead area between scenes while the laser scans the disc for the next scenario. This has been very well disguised with a notice wishing you good luck in the next scene.

With lots of action and great graphics, *Cliff Hanger* by Stern Electronics will certainly be a hit in the arcades in the New Year.

WHIZZKID RACES INTO ACTION

SUPERBIKE

If you think you're a scrambling whizz-kid — then try riding the Super Bike.

Bombing down a country lane you shift into top gear and revving up your bike try to break the ton. Suddenly a series of potholes split the road in front of you — jerking on the handle bars you pull the bike into the air and sail across them. But don't get too confident, more is to come.

Packed full of stunts, you've got every opportunity to prove that you're at least as good as or better than the infamous Eddie Kidd. Leaping over potholes, fallen trees and bushes is the least of your problems. Armies of

death heads in the form of skulls and crossed bones descend on you from out of the blue and, armed with a fire button, you must blast them back to hell before they land on you.

Other feats of skill and dexterity will include whizzing up a ramp and jumping over a line of buses and, providing you've managed to stay on your bike, you'll reach a tunnel which has to be negotiated to reach the end of the game.

Beware the skulls — they'll be attacking from behind as well as in front.

CUNNING IN THE COCKPIT

FIRE FOX

Atari is entering into the laser disc games race with what promises to be a thrilling spin-off from the movie *Fire Fox*, based on the action film by Warner Brothers which starred Clint Eastwood.

It's rumoured that hundreds of thousands of dollars were spent buying the rights to *Fire Fox* and producing the arcade game with the aid of a simulation model of the cockpit.

You've stolen a top secret Russian fighter jet and have to fly it out of Russian territory to the Americans. The Russians don't let you get away easily and send up missiles and other fighter jets to stop you. Your plane has its own weapons system, but you'll have to use your skill as a fighter pilot and a lot of native cunning to escape in one piece.

Atari believe that *Fire Fox* will be a spectacular success and are planning to launch it sometime this year.

THE SEARCH IS ON FOR THE C&VG 1984 ARCADE CHAMPION!

Have you rescued the Princess in *Dragon's Lair*? Or have you come first in the *Pole Position Grand Prix*? Or maybe you've destroyed the Zaxxon robot? If so you are a prime candidate for our 1984 Arcade Championship title.

Your name may well be plastered all over the high score tables on several machines in your local arcade — but believe me, you can only call yourself a true arcade champ when you stand up to receive the *Computer and Video Games Arcade Champion* trophy!

In our next issue we'll begin the search for our 1984 champion. Your first move will be to fill out the coupon and mail it to us.

All we ask you to do is to take the form along to your local arcade, pub or the place where your favourite arcade machine lurks, get that high score and get the publican or arcade owner to witness it for you.

You can aim for a high score on up to three different machines. Your chances of reaching our grand final in the summer are increased if you enter on more than one machine. There will be a grand prize for the overall champion plus runners-up prizes too. So don't forget — get next month's *Computer and Video Games* and begin your quest to become King — or Queen — of the arcades!

THE TENSION MOUNTS, THE ADRENALIN FLOWS. THE ADVENTURE BEGINS...

FOR YOUR ZX SPECTRUM

ALCHEMIST Can you discover the secret of the 'Spell of Destruction' and defeat the Evil Warlock. Even with your amazing powers of transformation the outcome is still uncertain.

ZIP ZAP Encounter hordes of aliens as your runaway droid enters the various domains of ever increasing intelligent attackers. Heart stopping tension and supersmooth animation.

ZZOOM You are flying the fastest most deadly machine yet devised by man. If your resolve begins to weaken, remember, the fate of an entire race depends upon the outcome of your mission.....will you succeed?

STONKERS You are poised on the very brink of battle. As Commanding General every decision is yours. Will your strategy enable you to capture your objectives? Will victory be yours.

GEM SOFTWARE

SOFTWARE FOR THE BBC-B AND LYNX 48/96K

SPANNER MAN for the LYNX £7.95

An earthquake has damaged the reactor coolant pipes of your local Nuclear Power Station. You, the local plumber, have been called into help mend the leaks. Can you repair the pipes using your trusty spanner and save the town from disaster, or will the mutant rats and the rising water send you round the bend!! A multi-level machine code game that stretches you and the Lynx to the limits giving you the best graphics ever and a whole host of features.

OH MUMMY for the LYNX £7.95

Your party of archeologists enter the pyramid in search of the mummies of the pharaoh's household. There are five burial chambers containing treasure, secret scrolls, keys, royal mummies and some nasty surprises. To pass from one chamber to the next, you must find the key and the royal mummy, but beware, you may uncover a guardian, who will chase your group to avenge your desecration!! A machine code game for those with nerves of steel and great courage.

UNTIL — 1 for the BBC-B £9.95

Two very useful utility programs for the BBC-B. Both tested on OS 1.0 and above. *Character Define* gives you a comprehensive and simple way to quickly create all manner of user defined characters. *Envelope Editor* will enable you to unravel the complexities of the Sound and Envelope commands, so that you can produce exactly the sounds you require.

TANK ATTACK for the BBC-B** £7.95

A machine code game for 1/2 players, defending supplies against computer controlled tanks. This game will stretch your reflexes to the limit as you battle with the enemy tanks. They won't be able to shoot back until they have supplies, but when they do, look out!! Joysticks required.

MISSION 1

BECOME A SECRET AGENT

PROJECT VOLCANO

Mission Software's complete package on Project Volcano, is probably the most advanced Adventure Computer Game Package you have considered this year. It is not just for the dedicated game player but for those that want to get involved in Secret Codes — Messages, and the seamy-side of Di6 (British Intelligence) and the K.G.B. IT IS A MUST FOR THE SINCLAIR SPECTRUM 48K AND DRAGON 32 HOME COMPUTER OWNERS.

When you receive your Adventure Game from Mission Software Limited, included in the package is your Passport to the international workings of the Secret Agents. Your personalised Passport will assist you in negotiating the K.G.B. network in the Soviet Block Countries and vital to the success of your mission. Command Headquarters will give you information that other Agents have recorded, together with their Communication Log, Mission Instructions, Secret Memos, Classified Diagram, Full Briefing Instructions and other Secret Data. IT'S UP TO YOU TO BREAK THE CODE AND BECOME A SUCCESSFUL SECRET AGENT. We rely upon our Agents to feed back information to make further projects interesting and complex, to tax your ability and to guarantee many hours of enjoyment. We believe Mission Software Limited is the only company that supports its Field Agents with a mass of Secret Information to make the Mission exciting and enjoyable which makes it a must in Computer Games.

- We know your friends will want to become Secret Agents and use your game, we will be quite happy to supply them with their Passport and Documents for £2.95 per kit. This way you always retain your personal Passport and Secret Information.

- To obtain your Game and personal Passport with all its Secret Documents send a Cheque or Postal Order for £6.95 (inc. P.P. & V.A.T.) with the Coupon at the foot of this advertisement.

- The moment you tell us you have completed your current assignment we will advise by Secret Data, details of how to penetrate one of the World's most secret establishments.

ORDER MISSION 1 TODAY AND JOIN THE GROWING NUMBER OF SECRET AGENTS OPERATING FROM COMMAND HEADQUARTERS.

John Menzies

KEEPING MARY AMUSED!

And now for something completely different! A graphics adventure where the action is played out before your very eyes!

Valhalla loads in a Spectrum under a striking title page and offers you six quests. These are to find special hidden objects: Ofnir (key), Drapnir (ring), Skornir (shield), Skalir (sword), Felstrong (axe) and Grimnir (helmet). These objects can only be discovered in the above order.

The gameworld has a cast of dozens, and at any location you may expect to meet and perhaps cross swords with a range of gods and goddesses (including Mary), giants, dwarfs, wolves and dragons, of varying temperaments and abilities.

BY KEITH CAMPBELL

In search of the foreign objects, you move around by issuing the usual Adventure commands, but may also play a 'wild card' by jumping on to a ringway if one is present. This is a magical method of transportation rather than a continuous urban dual carriage-way, and to travel one you must be carrying, of course, a ring!

Where *Valhalla* is different from other graphical Adventures is in its display format — the screen is split into three bands.

On arrival at a location, the top half displays an excellent hi-res picture, drawn very quickly. I got the impression that these graphics were composed of modules, re-arranged to give many combinations of picture from the same blocks.

Next, the lower 25% shows the text replies, whilst the final band rather too slowly draws the characters and objects present. The centre band therefore appears to form a continuous picture with the top band, like a stage.

In some ways, this game is like *Hobbit*, for all the characters have a mind of their own, and appear, disappear, drop things and attack you and each other according to their whims. But unlike *Hobbit*, they actually move. Their little legs walk, they jump about whilst fighting, and lift their wine to their heads when they drink. As this happens, so a text commentary is written below. If you want to pick up an object, then your figure will walk across the screen and get it.

Of course, all this slows down the rate

A COLOSSAL TALE OF COUNTRY FOLK

James Frost is stuck with a Colossal problem, trying to pass the clam. He is at his Witts End — and that baffles him too!

Steve Waller and Ian Hall have so far amassed 274 points out of 1100 in this game, and admit they can get no further. They have heard of dwarfs sleeping in a cave, and of dynamite. They urgently need directions to find them. If I can't help, who can, they ask? Oh dear — I can't? Who can?

But the most elegant Colossal plea comes from Mr. Dan Clark and Dr. Andrea Kingston, playing away at Skylark Farmhouse near Norwich. Rustics that they are, they turned bard to crave help:

Bumpkins' Lament

Colossal Classic mainframe game,
Is driving us poor kids insane.
It seems we've run right out of
luck,
We get so far and then get stuck.

We have the jewelry and the vase,
The golden eggs and silver bars,

The spices and the precious nugget
(Quite a way we had to lug it).

Can you help us in some measure
With the other hidden treasure?
Y2, carved upon a rock,
Could it be a secret lock?

The rug we think perhaps can fly
To secret places in the sky.
Will the mirror smashed and
broken,
Lead us to another token?

"Hocus! Sesame! Shazam!"
"Nothing happens" — blast and
damn!
Bumpkins both in helpless plight
Please save us from more sleep-
less nights.

To which I can but reply:

Hi Dan and And! Oh woe is mine!
I've had no tape from Level 9,
And so, you see, I must rely
On that great Mainframe in the sky.

My problem is with ease predicted,

Time on Comshare's much res-
tricted.

Thus forays in this game are brief
And efforts mostly come to grief.

I've caged the bird that wings it
quick,
(That rusty star's a nasty trick!)
I've built and crossed a bridge of
crystal,
And lost lamp's light for reasons
fiscal.

I've kissed a frog (some think me
kinky!)
And passed on warts to princess
slinky.
I think I'll catch some tadpoles
soon
The way those frogs cavort the
room!

To readers all with 9's adventure!
I herewith offer my debenture,
In return for heaps of clues.
Please put an end to bumpkin
blues.

EDUCATION THROUGH ADVENTURE

Solving an Adventure, as most of us know to our cost, is often a matter not only of solving a puzzle or being observant, but of hitting upon a particular word or phrase. Out comes a dictionary and Roget's Thesaurus, and with perseverance, we win through!

But what of an Adventure written in a foreign language? Never seen one around? Not played *'La Maison d'Amusement Mystère'*? Nor have I!

Consider the plight of Walter Goegebeur from Edegem, near Brussels. "Hoping you will forgive my mistakes against 'living English'," writes Walter, "but you're my last hope from being kept away from cracking Scott's *Mystery Fun House*". Walter had spent more than a month consulting friends and relatives, and studying English dictionaries, to no avail. He still got shot from the shooting gallery.

Walter could not be sure whether it was an English word or phrase he

needed, or if his problem was the puzzle itself! So I was pleased to be able to reassure him on his English, and spill the beans! (Sorry, Walter — I mean 'reveal all'). That, of course, highlights one of the difficulties of playing Adventure in a foreign language. The phrase I just used has nothing to do with making a nasty mess in the kitchen! However, because you have to master its idioms, playing Adventure in a foreign language is a good way of learning the 'living' language!

Rene di Giovanni wrote from Amsterdam to relate his difficulties with *Espionage Island* played on a ZX81. He was stuck in the plane, and unable to escape without dying. PULL CORD is the clue, and Rene could see the cord, but perhaps that phrase is particularly English.

On the other side of the coin, our lock-collector and masochist

Adventure-converter, Bill Stanton, spent his holidays in Germany, and got involved in translating a French Adventure. "Have you ever tried getting French-speaking Germans to give you the sense of idiomatic French phrases in German-English . . . ?" asks Bill. He is now back home in St. Alban's trying to recover, and probably programming his Pet with well known Basic statements like: POUR JE% = 1 A 8 : SI (X(JE%)=Z) ET (Y=9) PUIS VA A 8000 PROCHAIN JE%.

On a more serious note, the Adventure format lends itself admirably to educational software of all sorts, especially languages. It is an area of software that has not been exploited. Wouldn't school pupils find it fun if their next French homework was "Comment reveillez-vous la dragon dormante"? They would have to play a special version of Adventureland — in compiled French, of course!

of play, but if you like watching it all happen, then you'll put up with that.

Valhalla has a range of special commands. WHO will list the characters in the text area, with an arrow pointing upwards to each image. WHAT will do the same for objects, HOW will tell you your current strength and so on. Should you type in anything untoward, you will be told Mary is not amused. A little fellow will walk onstage, and in a very determined way approach you to remonstrate. This will cause your figure to blush severely!

Valhalla is written in Basic with some machine code routines. A look at the listing won't reveal much in the way of clues. And despite protection against looking at the listing, it is easy because, despite all the ballyhoo preceding its arrival, and a seven-strong production team, *Valhalla* has at least one bug, which will cause the program to stop and you to reload. But will YOU discover the words that crash the game?

Valhalla is from Legend, overpriced and overrated at £14.95.

GATEWAY

When we had a family visit recently, all the kids made for the computer room. This is known in most houses as a dining room — but it enables us to play while we eat!

They ignored *Space Adventure* on the Spectrum (don't blame them) and *Zork* on the TRS-80 (fools!), and although Dougie aged 8, defected to *Donkey Kong* on the Dragon, Karl and Rebecca headed straight for *Gateway to the Skies* on the Beeb. Of course, the Beeb is a schoolfriend, and my ulterior motive in getting them to help me through a review whilst being hospit-

PHILOSOPHERS, INCAS AND SORCERORS

Many try to enter the porthole, but are cursed by the Incas: carry the right things — one of them must be chiselled out of the flint.

To James Jennett playing *Ship of Doom*: a double switch may cast light on your problem.

To Brian Jones playing *Sorcerer's Island*: bribery can pay dividends.

For the impossible mission: don't be bad — do as you oughta, take the bomb up to the water.

For philosophers everywhere: approach cheese with protective device, and after taking it, drop it every so often for a bit. To relieve your neck, find the workman in the ME passages. Hop, crawl and run when in danger! And how many dogs do you want? Settle for three? Can you spot the second? You'll have to spot the third!

able to visitors had worked!

I went off to quaff home-made beer and make polite conversation, and occasionally popped back in to see how they were doing.

Quick responses — good! White on black text — bad! Replies less than terse — good! Karl had used a credit card in the village supermarket and got the reply "That'll do nicely!" I liked it! Back to the quaffing . . .

I could hardly wait till they all went, and I was straight on to the Beeb.

Now hardy Adventurer's will never pass up the opportunity to take a lamp or food. Once spotted, you can guarantee there will be an area of darkness ahead, and that you will need sustenance. So I took the lamp offered me in the gift shop, and proceeded to the supermarket with my credit card for food. That is where it all went wrong.

The supermarket cashier ratted on the deal, disappearing with my card without handing over the food. On impulse, I tried to shoot her with my laser gun. "I don't understand the word cashier." EXAMINE FOOD. "I don't understand the word EXAMINE." LOOK FOOD told me where I was.

Now just as necessary as a lamp, is the Adventurer's stock-in-trade — "LOOK (or examine) object". Being able to look at, and examine things is one of the means by which an Adventurer gets mystery and excitement in a game. Through this device, the author is able to avoid blatant clues, making the player wait until he deduces there must be more information. The player is then often given a puzzle or cryptic clue to chew on.

I got the food later, but my enthusiasm was shattered. A pity, for this game held such promise!

Vocabulary — bad. Logic/difficulty — doubtful. Plot/theme — shakily promising. Shall I try again . . . ?

Gateway to the Skies comes in two parts. I only looked at the first half, as you have to save data at the end of it to enter part two.

HELPLINE

Every now and again one of those desperate people trapped in a small room with a calculator writes in. The fact they are not in an asylum yet is a tribute to their tenacity. Has ANYONE got out of there since I last wrote about *Deathmaze 5000*, a couple of years ago?

Mr. Poles of Lutterworth will be disappointed to learn that the general consensus of opinion is that the *Philosopher's Quest* lamp cannot be lit.

Congratulations to Robert Davidson from Macclesfield, and Colin Bignell down in Littlehampton, the only readers so far to lay claim to completing this game. In a long helpful letter, Robert suggests that Mr. Poles must have been sleeping with the lamp on, for the game can be completed without relighting it. Colin Bignell says it cannot be relit, and warns Mr. Poles to be careful in its use — especially when talking to the old sailor. James Frost of Windlesham agrees, and suggests using matches for extra time.

But what's this? Karl Howard writes from Rochdale and says the lamp CAN be relit — type RUB LAMP. I suspect the confusion is because Mr. Poles did not state whether or not he had run out of fuel.

Shaggy dogs, cheese and albatrosses are among the favourite subjects of all good Philosophers, and clues have arrived from numerous sources, including Roger Durrant, Mark Chaffey, and C. M. F. Bone, to help David Somekh.

Keith Lumb from Lowton near Warrington is shedding crocodile tears in the everglades. He is playing, or rather trying to play, *Sphinx*. Why does his magic bridge collapse when he tries to cross it?

And what about those crocs?

Christopher Tihanyi is a troubled man. He's got five adventures in a state of chaos down in Bristol. I can help him directly with some, but here is a plea in which I join — how DO you open the Xenos safe?

Martin Brunt of Woolwich is lucky enough to be playing *Zork* on a VAX-11 750, but is unlucky to have run into severe problems. (Don't we all!?) What is the receptacle in the balloon for? Martin suspects it's for something with which to heat the air, but the only suitable object he can find is an ivory torch which burns out after melting the glacier. Come in *Zork* players!

Do you know where to find the second stone tablet in *Golden Voyage*, to help Paul Hurditch in Rotherham?

Some find *Mission Impossible* too simple, others impossible. Disarming the bomb has caused much confusion, especially to Andrew Dobson. See page 57 for the clue.

So many readers have written in

with high *Hobbit* scores, it would take a page to list the names! So here is the only claimant to a 100% score so far — by Keith Oliver of Tollesbury.

From David Worbishley of Baldingstone, come some comments about *Swords and Serpents*. He suggests that Messrs. Hughes and Nosworthy have not enjoyed the full flavour of the game, which can only be done playing the two-player version.

"The great advantage this has is that the players can actually enter the dragon's lair, gather up the treasures inside, and talk to each other to combat the excruciating boredom," writes David. "Incidentally," he adds, "the dragon plays no part in the game and might just as well be a giant sausage as a sinister serpent."

If YOU are stuck in an Adventure, can help an Adventurer in distress, or have an interesting or amusing Adventure experience, write to me at Adventure Helpline, *Computer & Video Games*, Durrant House, 8 Herbal Hill, London EC1R 5JB.

CROSS THE DOTS!

Space Island turns your Spectrum into a control panel on board a starship in geostationary orbit above the island of Roba on the planet Zyro. You control an android who 'stands alone amidst wreckage and awaits your command.' Your TV set becomes a videoscanner (what else?) showing an 'orbital map' of Roba Island.

Somehow my Spectrum didn't quite have the feel of a control panel — well, let's face it, have you ever seen a control panel you can slip into your back pocket and not notice?

Obviously my pet android felt this, for when I tried to move him around the tiny island (him a dirty great cross trying to rendezvous with microscopic dots representing objects), he didn't respond with quite the alacrity one

might expect from such a high-tech device. Once moving, this obstinate creature would proceed inexorably in the same direction until commanded otherwise. Even after a good night's sleep he would wake up and plod on regardless in obedience to his previous instruction!

Apart from this painful method of movement, *Space Island* boasts a vocabulary of 19 words, yes folks — 19! Not whole words admittedly, but the initial letters of verbs.

The cassette inlay mentions slick machine code display. However, the program is written in Basic, and reaction is just not slick enough to give adequate control.

Space Island is for 48k Spectrum from Terminal Software, price £6.95. Fairly apt, for if I'd played it for much longer, I would now be suffering from terminal boredom.

MOGUL

THE HOTWARE PEOPLE

METAMORPHOSIS

You stumbled into the nest of the **Cyglorx** and find yourself fighting off robot tanks guarding the **Cyglorx** eggs. You think you have everything under control and then the eggs start **hatching**. Commodore 64 version features 4 different screens.
VIC 20 - COMMODORE 64
£7.95

CREATOR'S REVENGE

The creator assembled a massive army of **robots** and **insects** to take revenge on the earth. Destroy **insects**, get **treasures**, and get the **neutron bomb deactivator**. Battle robots and **destroy** the neutron bomb before it annihilates your city. Miss and you must face the **mutants**. Features 4 different screens.

The Electronic and Cartoon

Pack up your paintbox, throw away your paintbrushes and move into the electronic age of art with our amazing new PIXSTIK™

PIXSTIK™ opens the way for all the family to create colourful designs and pictures – yet it's so much cleaner and simpler to use than conventional crayons and paints. Plus you have the built-in advantage of the exclusive ABC feature. ABC stands for animate, bounce and cartoon, meaning you can even add movements to your sketches and drawings. It's just like creating your very own cartoon clips.

With PIXSTIK™, the colours never run dry and you don't have to worry about paper supplies.

You just plug in and all the materials you need are listed on the screen. You'll have access to up to 16 exciting colours and 16 separate commands. Simply give your instructions by pointing PIXSTIK™ at the appropriate colour or command.

PIXSTIK™ couldn't be easier to operate. Whether you're eight or eighty, you'll find it fascinating, especially when you discover the range of pictures you can produce.

Wherever your imagination goes, PIXSTIK™ will follow. It gives

Paint Box on Set

you freehand freedom or creates straight lines, triangles, rectangles, circles and ellipses with geometrical precision.

Choose whether to fill your shapes with solid colour or leave them blank. And if, after that, you still favour a paintbrush effect, simply move PIXSTIK™ into paintbrush mode and it will do the rest.

What makes PIXSTIK™ even more special is that it doesn't simply stop with a completed picture. Because it incorporates the special ABC feature, you can use individual designs as part of animated sequences and cartoons.

At the "animate" command, pictures stored in memory will reappear in turn. On the "bounce" instruction, your pictures will move forwards and backwards and when "cartoon" is called up, they will reappear continuously in sequence with just the effect of a professional cartoon clip.

Pictures can be drawn using fine lines, blocked lines or paintbrush effects for extra variety.

PIXSTIK™ can bring all your pictures to life. Use it to show the sun moving across the sky, smoke curling from a chimney and an arrow hitting its target.

The only limit on PIXSTIK™ designs is your own inventiveness. There are even three different stick modes to ensure different colours can be drawn across each other without merging.

There is no limit to the wonderful artistic creations you can produce with a PIXSTIK™ and special PAINTBOX Software - here are just a few examples of its infinite possibilities.

For only £29.95, the PIXSTIK™ pack includes three superb computer games to play with your stick, plus a comprehensive instruction manual.

No paintbox could ever offer so much. So swap your paintbrush for a PIXSTIK™ today. It's the paintbox of the future.

PIXSTIK™ is available by mail order only, exclusively from Computapix Ltd., Gores Road, Kirkby Industrial Estate, Liverpool. Dealers: Contact Selena on 051-547 2741

BY FRANK ROONEY
RUNS ON A SHARP MZ80K!

LOST IN THE JUNGLE

Remember last issue when we left you high and dry in the jungle? Well, this issue we are going to help you get further back to civilisation! Frank Rooney, our Sharp programmer, is the man behind this fiendish graphic adventure. He is challenging you to find your way out of an unexplored jungle with only your wits — and a few other bits and pieces you'll pick up along the way — to help you. Dare you take up the challenge in part two of our Adventure special. Final part next month!

The REAL Challenge!

For your ORIC or SPECTRUM

Jogger Guide your joggers across a 4-lane motorway and crocodile infested river to reach their safe haven through the gap in the fence. Each time a jogger is safely home the next one will have to encounter more lorries and cars on the motorway but fewer crocodiles and logs in the river. Full on-screen instructions. M/code, sound effects and full action colour graphics.
 Oric Author - Adrian Sheppard
 Spectrum Author - Mike Howard
 Oric 48K - £6.95 Spectrum 16/48K - £4.95.

FOR ORIC AND SPECTRUM

Dinky Kong Attempt to rescue your lovely girlfriend who is held captive by the angry gorilla. As you climb the connecting ladders and move along the gangways, the gorilla will be throwing barrels and fireballs at you! The only way to reach her is to leap over these obstacles and progress to the top. M/code action with sound effects, full colour action graphics, skill levels etc.
 Author - Adrian Sheppard
 Oric 48K - £6.95

Quincy A superb dice game for 2 to 6 players. 3 throws per go to try and score points by obtaining certain combinations, i.e. 3 of a kind, a run, pairs etc. 13 go's to complete a game. The highest score is the winner! It's a game that is easy to learn but can be won by skilful and thoughtful play. Full colour graphics, on-screen instructions, bonus scores, etc.
 Author - Tony Churcher.
 Spectrum 48K - £4.95.

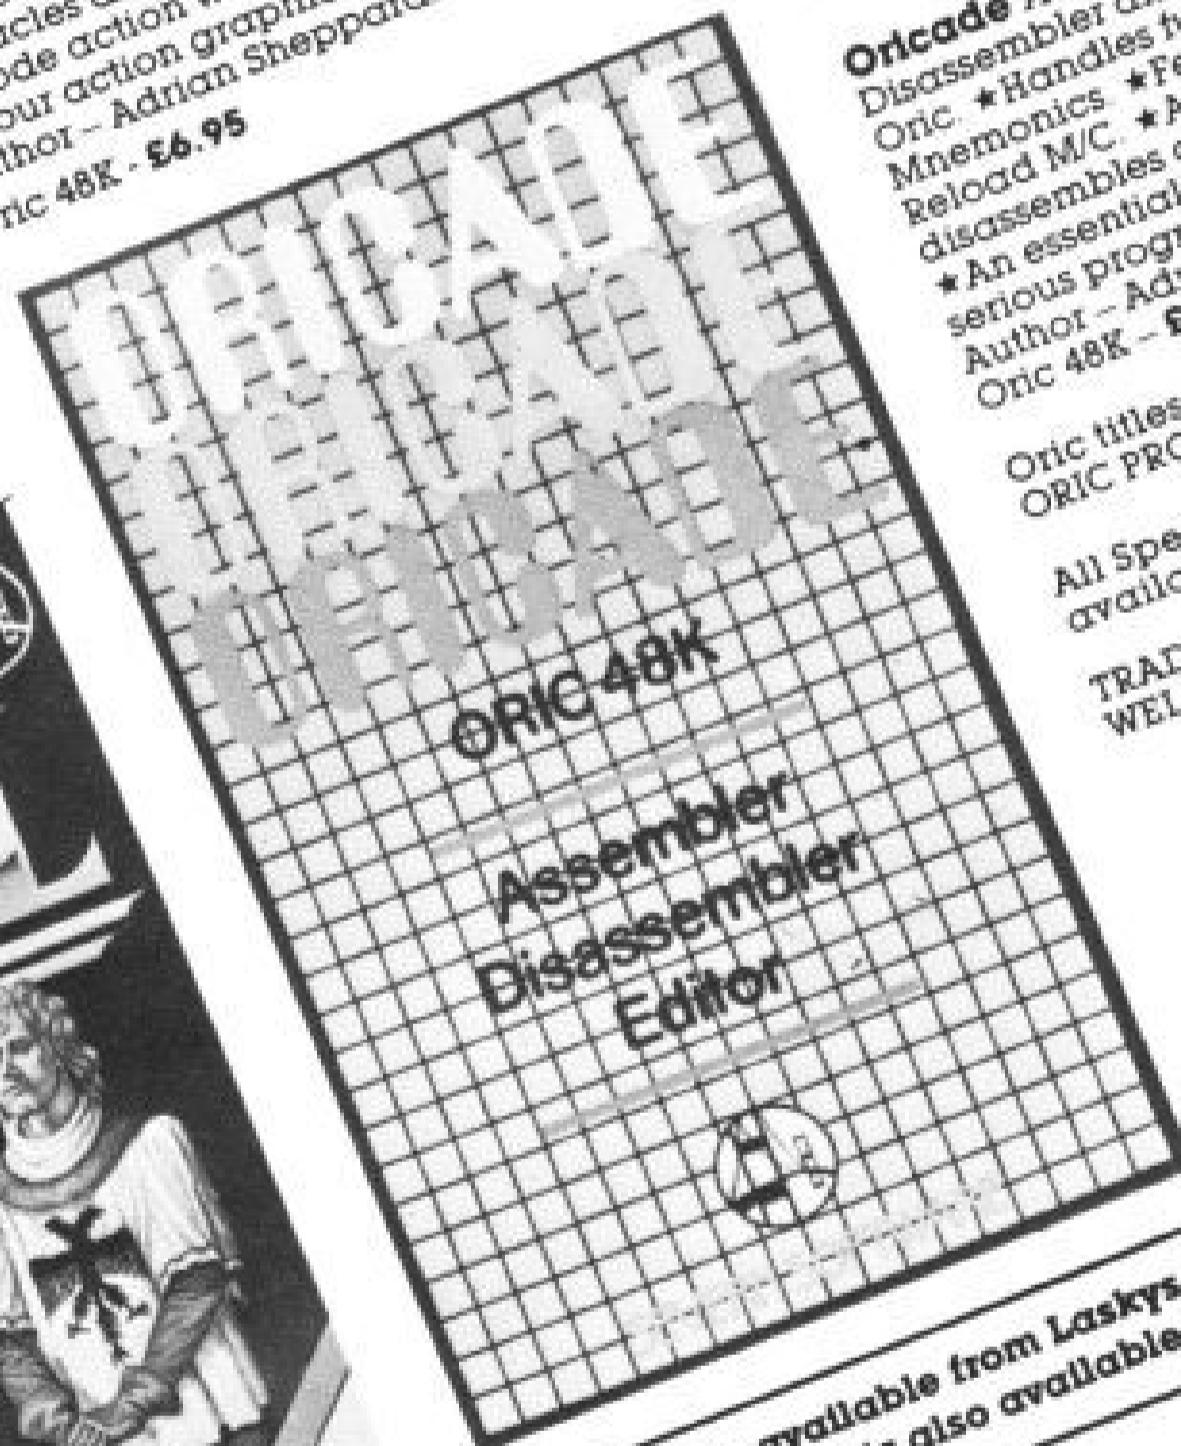

SEVERN SOFTWARE
 5 SCHOOL CRESCENT
 LYDNEY
 GLOUCESTER GL15 5TA

Grail You have been chosen to seek and recover the Holy Grail from the Castle Perilous. Throughout the course of your task you will have to use your skill, intelligence and logic (along with a little luck) as you encounter many foes. You will have the opportunity to gather weapons and armour to fight with, but you are wounded your strength will drain away - many other features such as warp, jewels etc.
 Author - Adrian Sheppard.
 Oric 48K - £6.95.

FOR ORIC 48K

Orcade A combined assembler/disassembler and editor for the Oric. * Handles full 6502 Mnemonics * Features Save and Reload M/C * Assembles and disassembles at any address. * An essential tool for any serious programmer.
 Author - Adrian Sheppard.
 Oric 48K - £8.50.

Oric titles recommended by ORIC PRODUCTS INT. LTD.
 All Spectrum Software is available on Micronet 800.
 TRADE ENQUIRIES WELCOME.

Moria A challenging adventure game set in the mines of Moria. You'll have to try and survive encounters with the monsters of middle-earth while trying to locate Durin's Ring. The Wizard and the Trader may help or hinder you on your journey to find and open the hidden doors to freedom - a game that will really test your character and staying power.
 Oric Author - Adrian Sheppard
 Spectrum Author - Mike Howard
 Oric 48K - £6.95 Spectrum 16/48K - £4.95.

SNAG JNR

SCREAMING FOUL UP

T. HITCH

SINCE OUR PROGRAMMER DISCOVERED THE DE-BUGGING CARTRIDGE LIFE HAS BEEN

HELL FOR THE BUGS

WE'RE DONE FOR! EVERY TIME HE USES THE DE-BUGGING CARTRIDGE HE'S GOT US BEAT! ... BUG BEATEN! WHIMPER!

IF ONLY WE COULD GET AT THE CARTRIDGE.

SOB! THE DISGRACE!

SHUDDER!

SUDDENLY!!

HUH! HE'S TOO CAGEY TO LEAVE IT LYING ABOUT. HE'S LOCKING IT IN HIS ULTRA MODERN, PICKPROOF SAFE!

WELL, THAT'S IT! UNLESS SOMEONE ROBS THE SAFE WE MAY AS WELL LEAVE THE MICRO!

AHEM! I THINK I CAN HELP YOU

IT'S BUG BANDIT!

THAT EVENING.

MUCH LATER..

A STEALTHY FIGURE STEALS INTO THE NIGHT.

HEE! HEE! MY SUPER, NEW COMPUTERISED, LOCKING SAFE WILL KEEP THOSE MEDDLING BUGS AT BAY!

GOOD LUCK BUG BANDIT!

FIDDLE! ADJUST! TWIDDLE!

SNIGGER! EASY PEASY! I'M MUCH BETTER AT BREAKING INTO SAFES!

THE NEXT DAY.

TAPPITY! -TAP!

OH, WHAT A WONDERFUL DAY! I SHALL GIVE THE BUGS A BIT OF AGGRO.. FOR A CHANGE, I'LL JUST TAP OUT THE COMBINATION AND..

HUH!

SOB! I'VE BEEN BUGGED AGAIN!

JUDDER!

BASH! THUMP! BAM!

AHEM!... AND I ESTIMATE HE HAS A ONE IN ONE HUNDRED AND SEVENTY THREE MILLION CHANCE OF WORKING OUT THE NEW COMBINATION

CHEERS!

HOW-DE-DO PARDNERS?

YEP FOLKS — IT'S HERE "CALIFORNIA GOLD RUSH"

This here's Prospector Jake, I sure am havin' one helluva time tryin' to peg ma claim with those damned Injuns a hootin' and a hollerin' all over this territory. Ma job gets harder as I move from one Gold Field to another. I know, that is me an' ma stubborn hornery ol' Mule here know of 24 rich an' I mean rich seams of pure Gold. All it needs to make this here ol' critter happy is that you help me peg every doggone last one of them claims.
Can YOU help Jake become rich, help him peg his claim, dodge the arrows, avoid the tomahawks, and plant the Dynamite in just the right place? . . . YOU CAN!!!
YIPPEE . . . Git yer Picks an' Shovels and join the CALIFORNIA GOLD RUSH . . . NOW
Amazing Arcade Action . . . Stunning Sound and Graphics
Available NOW for Commodore 64.
£7.95 including P & P

**MICROSYSTEMS
COMMODORE 64**

- * **CALIFORNIA GOLD RUSH:** PCN says "could be another Pac-Man" What more can we say!!! (Joystick required) £7.95
- * **YAHTCEE:** This is THE version of the traditional dice game. For 1 or more players £7.95

- DOZY DODO:** Did you know that the Dodo lays it's eggs in mid-flight? Conservation Charlie is doing his best to save the species but is it enough? (Joystick required) £3.95
- SPRITEGEN 64:** Define and design your sprites the easy way £3.95
- CHAIN REACTION:** Control the atomic reaction in this game of skill. Great graphics — super sound £3.95
- LINK-A-LINE:** Make the connection 4 enjoyment £3.95
- L.A. SUNSET:** Could it be the final sunset for L.A. as the returning Space Shuttle goes out of control? £3.95
- STAR TREK 64:** Kirk, Spock and Co. beamed down to your 64. (Joystick required) £3.95
- COLOUR ME QUICK:** A fascinating game of logic that is highly addictive £3.95

OUR HALL OF FAME GAMES

PLANETOIDS

Acornsoft's brilliant version of Defender for the BBC. At Acornsoft Neil Raine holds the top score of 408,000 — beat that!

MINED OUT

Quicksilva's highly rated game for the Dragon 32.

ARCADIA

One of the best selling games around from Imagine. You can enter on the Spectrum or Vic versions — but don't forget to tell us which?

JET-PAC

The game that made Ultimate a top name in the world of games software overnight and which is rapidly becoming a cult game. For the Spectrum and Vic.

DIAMOND

English Software have high hopes for this mining game and are even offering a diamond as a prize! For the Atari owner.

KRAZY KONG

The best version of Donkey Kong we've seen for the Vic. From Anirog.

VIOLENT UNIVERSE

From Quest, the company who have developed a high score verification system for their Spectrum games.

MANIC MINER

Sheer addiction for the Spectrum from the Bug Byte people.

SPLAT

Help Zippy survive in this extremely playable game from new games company Incentive Software.

ZALAGA

Space age action from Ardvark for the BBC.

ATIC ATAC

A great new graphic adventure-style game from Ultimate.

3D DEFENDER

Malcolm Evans' game for New Generation Software which set new standards for graphics on the ZX81.

(On Violent Universe, please send your high scores direct to Quest at the address on the cassette inlay and NOT to C&VG. Quest have their own way to verify scores.)

JET PAC

- 4) Calvin Lawrence, Peterborough, — 582,225
- 5) Mat Newman, Amersham, Bucks, — 516,975

How many times have you managed to reconstruct the Jetman's rocket ship? Can you defeat the Mutant Telephones in Manic Miner? Have you saved the universe from the Parsec aliens?

Well, if you reckon you are a computer games ace you're a prime candidate for our **Hall of Fame** — C&VG's answer to all of you hi-scorers who thought you didn't have anything more to prove!

We've selected some top games from top software companies and now we're inviting YOU to send in your top scores on our **Hall of Fame** games. All the games have been tried and tested by a review team — and all of them are fast, challenging and good value for your precious pocket money.

You can spot *Computer and Video Games Hall of Fame* cassettes in your local computer store because we've had some special stickers printed which the software companies are sticking on to our C&VG approved games.

So if you are looking for a value-for-money game that will keep its challenge, stay fresh and challenging as the day you first loaded it into your micro for months and months, check out those tapes with a C&VG sticker about their person first!

Meanwhile, if you think you qualify as a top scorer on one of our **Hall of Fame Games** — listed elsewhere on this page — then fill in our **Hall of Fame** coupon, get it signed by a witness and stick it on a postcard. Then all you have to do is mail it to **Hall of Fame**, *Computer and Video Games*, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

In the New Year we'll invite some of the best top scorers along to a grand finals to prove their skills in the spotlight. In the meantime we'll be printing the top five scorers in our **Hall of Fame** selection each issue.

And each month we've got a C&VG "The Champ" t-shirt to give away to the top scorer on each game featured on this page. Your score doesn't have to be better than the one we printed the issue before — it simply has to be the highest we've received in time for our current issue's deadline.

We'd also like to hear from you if your favourite game isn't included in the **Hall of Fame** line-up. Maybe you'll persuade us to squeeze it in!

JOIN THE SOFTWARE CLUB AND SAVE £££ ON YOUR TAPES ...

Home Computer Software

SPECIAL INTRODUCTORY OFFER!

Buy any 3 Tapes

Save up to £18.43 on retail prices and get further Software at Big Savings

Join the Software Club and enjoy the better way to buy your software by simply returning the coupon below – select any three of the introductory software from the large selection illustrated on this page at the amazing price of only £2.99 each. Sending for the introductory offer does not bind you in any way to the Club and we don't require any money until you have had time to judge the quality of the tapes, in your own home. When you have played them, and appreciated the high quality you will be taking the first step towards enjoying all the 'plusses' of your membership in the Software Club

Free Monthly Colour Brochure
Each month you will receive a copy of The Software Review, packed with all the very best software and the best of pre-releases – all that we request of you is that you purchase a minimum of six tapes from the many hundreds you will be offered during your first year as a member of The Software Club. When you see the vast range, at the heavily discounted prices you will probably want a lot more, but that's up to you.

*All prices quoted are manufacturer's recommended prices.

The Software Club, Salisbury Square, Old Hatfield, Herts AL9 5AD.

All you have to do
Fill in the coupon, marking carefully the Code Nos of the 3 Introductory Tapes you require. Do not enclose any money now – we offer only genuine tape – from all the leading manufacturers backed by our no quibble replacement service should you have any problems with our software.

INTRODUCTORY DISCOUNT COUPON

To: The Software Club, Salisbury Square, Old Hatfield, Herts AL9 5AD.

Please accept my application and enrol me as a member of The Software Club and send me the introductory tapes whose numbers I have written in the boxes below, for which you shall charge me in due course, should I decide to keep the software (plus a total of £1.03 for postage and packing*). If I am not completely satisfied, however, I may return the tapes intact within ten days, my membership will be cancelled and I will owe nothing. As a member, I need not take a tape every month (or if I want no tape at all), I can say so on the form provided. I will, however, choose at least six tapes in the first year. All software is described in advance in the free monthly "Software Club Review" and is offered at a discounted price. I am over 18 years of age. (This application must be from your parent or guardian if you are under 18 years of age).

RUNS ON A SHARP MZ80 K

BY ANTONY NAHUM AND RONNIE SHARMOOR

Squaaaaark! Alien eagles are attacking Earth — and it's up to you to save us! Can you fight them off? The eagles attack in waves — ten eagles to each wave. If you manage to drive off one wave the next moves faster. If an eagle lands on earth it will pick you up — you have to make sure you are over a platform when it drops you otherwise — SPLAT! If an eagle lands directly on you you'll lose a life. Full instructions are included in the program. Make those feathers fly!

Illustration: Terry Rogers

UGH!

The Ice Age has come and Ugh must collect food. But stealing Ptery the Pterrodactyl's eggs may not have been the best idea! This has to be the best graphics/animation ever on the Dragon 32.....and now Ugh is available on the CBM 64 too! A smash hit! £6.95, Dragon 32 & Tandy Color 32K. £7.95, CBM 64. Joystick compatible.

ZOIDS

The most amazing new game for the CBM 64. Well, what else would you call a space shoot-em-up game created in the 18th Century by a distant cousin of J.S.Bach?! £7.95 Cassette. Write for Disc version.

DRACULA'S REVENGE

Sanctify Dracula's castles by doing battle with Werewolves, Ghosts and Vampires! Amazing Hi-Res graphic animation and movement. £6.95, 48K Oric 1.

SUPER METEORS

The best ever version of this game for a home micro! £6.95, 48K Oric 1.

SOFTTEK MASTERS OF THE GAME

MICROBOT

As a microscopic robot transported by energisers inside a mentally unstable robot's head, you must de-bug its brain!

The most amazing, super smooth, flicker-free high-resolution graphics for the ZX Spectrum. This 'arcade simulation' original game is a must for your collection!

£5.95 48K Spectrum. Joystick compatible to Kempston, Sinclair, Protek, A&F etc.

ICE GIANT

The wizard has set an eternal winter on the land, and sent forth his Ice Giants to crush your fortress. But you, flying your eagle-mount, armed with your maser will melt them into non-existence. Superb graphic animation make this the best ever Oric game. £6.95, 48K Oric 1.

GALAXIANS

Full feature version of the classic game that'll never be beat! £6.95 48K Oric 1.

ACHERON'S RAGE

The most original shoot-em-up game for the Oric 1. 9 waves of aliens! £6.95, 48K Oric 1.

The world's first true 3D game.

Postern bring you the first fully
3 dimensional stereoscopic game.
by Mike Singleton

If you've escaped from
the Snake Pit, survived
The Siege, ridden the
mighty Shadowcat,
and conquered the
fearsome Firehawks -
see if you're ready for
the ultimate experience.

**SALOON
SALLY**

Turn the tables on the Cowboys

SALOON SALLY is in a tricky situation. After an evening of drinking and gambling, four roughneck cowboys are wreaking havoc in Sally's saloon.

While the fight progresses Sally spots her chance to pick up the gold lying around. Guide her from table to table filling her pockets but watch out in case the cowboys catch her.

As the pianist pounds away regardless of the commotion, Sally can keep the cowboys at bay by hurling tables and chairs. But the action gets more hectic and the music gets faster—you'll need all your wits about you to keep up with the pace.

SALOON SALLY from Psion Software is a compulsive and addictive machine code action game exclusively for the BBC Microcomputer (Model A and B with 32K RAM).

Available from W. H. Smith, Boots and all good software retailers for only £7.95.

The whole range of quality Psion Software, including the popular Vu-Calculator and Vu-File applications programmes are available from W. H. Smith, Boots and all good software dealers.

PSION
SOFTWARE

Dealers are invited to contact Psion to find out details of substantial discounts for trade orders of our best selling software for the BBC Microcomputer.

DRAGON HUNGRY HORACE. It has been said that Horace games are in a class of their own. In fact, Horace is almost a legend. Hungry Horace, the original Horace adventure, is now available for the Dragon 32.

COSMONAUT. Written entirely in Machine Language, Cosmonaut is an exciting and challenging game of arcade strategy. Works with joystick or keyboard and features moving elevators, storm troopers, laser guns and more. A full screen game for the unexpanded VIC 20.

THE HOBBIT. Visit J.R.R. Tolkien's Middle Earth in the most amazing adventure yet devised. "A game by which future games will be judged." — Personal Computing Today. "Superior to any other adventure game." — Your Computer. The Hobbit is now available for the BBC, Oric, Commodore 64 and Spectrum.

H.U.R.G. A revolutionary piece of software for your 48K Spectrum which allows you to develop high quality Machine Language arcade games with absolutely no programming experience. Enter the H.U.R.G. competition and win £3000.

MELBOURNE DRAW. Now with Melbourne Draw you can create dazzling, intricate colour graphs and pictures on your Spectrum screen without special programming skills. The most useful and powerful graphics utility program for the Spectrum.

MELBOURNE

FORTH. Abersoft Forth is an implementation of the Forth Language for your Spectrum 48K. Forth is closer to Machine Code and more than 10 times faster than BASIC. "The only Spectrum package which has been endorsed by the Forth Interest group" — Sinclair User.

PENETRATOR is one of the most challenging arcade games for the 48K Spectrum. Amazingly fast arcade action includes training mode and unique customising feature. "Penetrator is my pick — the graphics are terribly impressive . . . a most enjoyable and addictive game." — Computer and Video Games.

COMMODORE 64 HORACE GOES SKIING is the sequel to the very successful Hungry Horace. In this adventure our hero attempts winter sports. Skiing is complete with slalom flags, trees and moguls so watch our Horace!

Blue Thunder

by Richard Wilcox

Richard Wilcox Software

STATION ROAD, WALSALL WS7 0JZ

After skilfully piloting your Jetcopter through a bombardment of Electronic Storms, Ground & Sea Based Missiles and attack from Armoured Barrage Balloons, you thought you were safe to complete your mission ... But No! ... yet another wave of deadly Jet Fighters appear from nowhere with only one objective...to eliminate you!

Only your Hyper-Phase Lasers and amazing arcade skill can keep you alive to complete a task that looks impossible. As the only survivor of a once mighty invasion force you must penetrate deep beyond enemy lines. From a remote island protected by a complex defensive screen you must rescue your wounded comrades held captive beside an unstable nuclear reactor, which you must first destroy!

The ultimate in 100% Machine Code Arcade Games from a Master Programmer, achieving a new peak in programming perfection and super smooth movement. Blue Thunder sets astounding new standards in Hi-Res Graphics with Pixel Scrolling over 6 screens
5 different missions, Hi-Score and incredible breathtaking PERSPECTIVE GRAPHICS!

Richard Wilcox Software carries a lifetime guarantee, should any of our games fail to load please return them for an immediate replacement.

All Richard Wilcox Software is available from leading software outlets or by completing the attached coupon.

To receive your advance copy of BLUE THUNDER before it goes on general release complete and post this coupon to us today! We will rush you your copy by return of post!

DOOMSDAY CASTLE

is an arcade style game
with the feel
of a real adventure

Doomsday Castle consists of a labyrinth of 76 complexly inter-connected Halls and Passages where you will meet a whole host of adversaries serving the infinitely evil Scarthax, the Garthrogs, the Orphacs, the phenomenally nasty Googly Bird and the Urks which manifest themselves in over fifty unbelievably weird and wonderful guises.

Scarthax has scoured the Universe to bring together the six ancient stones of lifeforce. United in Doomsday Castle they are being used to wield an irresistible power over the cosmos, emanating waves of corruption through every galaxy.

To save the Universe, you must battle your way through the Castle to find and collect the six stones and use their force against Scarthax to destroy Doomsday Castle, hopefully escaping yourself before the final cataclysmic explosion.

The task is not easy (saving the Universe never is!) and it will take you many games to unfold the structure of Doomsday Castle and discover the locations of the ancient stones. The addictive arcade style action will keep you coming back to play but the overall challenge should still keep you occupied for months.

You take on the role of our super hero ZIGGY shown here above in his exploratory capsule in combat with an Urk disguised as a pangalactic gargleblaster (!!) This is a true representation of the on-screen graphics.

FANTASY SOFTWARE
is available from

RUNS ON AN ORIC-1 IN 48K

BY MICHAEL RUSSEL

Can you avoid the giant charging Rhino as it chases you through the forest? Well, if you can't, don't program in this game because you'll soon be in trouble! The object of the game is simple — dodge the Rhino!

You'll find yourself in the forest with a fierce horned animal bearing down on you — how long can you stay out in front? Your only hope of safety is the Missionary's hut — if you can reach it, the Rhino will be beaten — and you'll be ready for the next chase, when more Rhinos will be after you.

The density of the forest can be changed by altering line 10 and the ferocity of the Rhino in line 20. The initial number of Rhinos can be altered by changing line 25.

MY SECRET FILE

Program by Phil Nathans

Based on the best-selling Puffin book by John Astrop

A personal database for your darkest thoughts.

Do you have secrets you wouldn't even confide to your closest friend? Let alone your family?

Do you have secrets about your friends and family you wouldn't confide to anyone but yourself?

At last, you're no longer alone. **My Secret File** turns your personal computer into a personal confidante. And to keep your confidences confidential, it's even password protected – because these days, you can't even trust your micro not to blab.

Trust no-one: file your friends before they file you.

Available for the: **Commodore 64** ISBN 946855 30 7 **Spectrum 48K** ISBN 946855 35 B

THE UNORTHODOX ENGINEERS: THE PEN AND THE DARK

Adventure game program by Keith Campbell
Based on the story by Colin Kapp

Colin Kapp created the classic SF stories about the Unorthodox Engineers – and now you can try to solve the mystery of the indestructible pillar of darkness and the riddle of contra-energy in this mind-bending text adventure game.

Reading Colin's story in this pack should help you. But once you and your micro are locked into the problem, not even Colin could get you out.

By special arrangement with an unspecified alien culture, Mosaic will let you have the story along with the program – so at least you're in with a chance.

Please read the story carefully . . . because we'd like to release our Spring SF bookware blockbuster (Harry Harrison's *Stainless Steel Rat* on micro for the first time!) before you carelessly unleash contra-energy across the universe. Thank you.

Available for the: **Spectrum 48K** ISBN 946855 15 3 **BBC Micro B** ISBN 946855 20 X

Available from good bookshops and computer stores.

Nuclear power stations and men don't mix. There is always the danger of exposure to radiation or human error that can cause catastrophic results. There is also the danger of sabotage or terrorist action.

The solution to all these problems was the Manson Green Automated Nuclear Power Station. It is run by robots and a laser defence system keeps out unwanted visitors. It all worked perfectly — until now!

There has been a malfunction and the defence mechanisms are preventing anyone getting in to solve the problem! Your job is to save the power station by collecting the fuel rods and storing them in lead-lined containers.

The rods are at the top of the screen and can be recognised by the flashing radiation warning indicators attached to them. You have to collect the rods, one at a time, and transport them to the base of the screen where you'll find a corridor full of lead-lined containers.

But all the time the laser defence system will be attempting to blast you!

You can play the game using the keyboard or Kempston joystick. Further instructions are included in the program.

Illustration: John Higgins

Step into the third dimension

Take a giant step closer to reality with New Generation Software. The 3D Graphics of New Generation programs bring the screen alive and makes other games look as flat as snakes and ladders.

Spectrum owners will find that seeing is believing when they open the door on 'THE CORRIDORS OF GENON', the latest creation from New Generation. You will be saving the Universe from the evil that now controls all things. But beware – the sound of footsteps approaching could be Bogul!

Corridors of Genon for 48K Spectrum £5.95
'It is a superb program, and a well conceived plot. Brilliant!' 'Value for money 100%' Home Computing Weekly
 Knot in 3D for 48K Spectrum £5.95
'Addictive, playable game' C & V Games
 3D Tunnel for 16K/48K Spectrum £5.95
'A masterpiece of programming' C & V G

Hurtle into a void leaving a trail for your unseen pursuers in 'KNOT IN 3D'. Weave your way through up to five trails but be careful, you could get knotted! Or travel through the depths of a moving tunnel full of bats, rats, spiders and toads in '3D TUNNEL', with a special surprise in the 48K version.

Stamina is the vital ingredient of 'ESCAPE', as you'll be venturing into the maze pursued by walking and flying dinosaurs.

ZX81 owners must be prepared for the
 Escape for 16K Spectrum £4.95
'One of the best and most original games we have seen for the Spectrum' Sinclair User
 3D Monster Maze for 16K ZX81 £4.95

commodore 64 games cassettes

SUPER SKRAMBLE!

Personal Computer News (15-21 Sept '83) gave SUPER SKRAMBLE! an overall rating of NINETEEN OUT OF TWENTY and described it as: "Well implemented with beautifully smooth scrolling and very nice graphics."

SUPER GRIDDER

"... a compelling piece of frivolity that could give hours of fun." was the verdict of Personal Computer News (22-28 Sept '83).

SUPER SKRAMBLE!

"An excellent game" said Computer & Video Games magazine (Sept '83).

STELLAR DODGER

A game of skill and anticipation in which you must dodge your way through asteroids to complete your mission.

NEW

TERMINAL

SUPER DOGFIGHT

The first 64 games cassette to have SIMULTANEOUS TWO-PLAYER ACTION - realistic sound effects too.

NEW

HUNTER

A fast action game in which your pursuers gain in speed and intelligence as you master each successive screen.

Sinclair Spectrum 48k

VAMPIRE VILLAGE and SPACE ISLAND

are REAL-TIME graphic adventures and every game is different from the one before.

CITY is a unique REAL-TIME better-than-a-board game for 1-4 players that combines simplicity of use with complexity of form as the city you build takes on a life of its own.

QWARRK

You are on a secret mission to a remote planet for the Intergalactic Federation, picking up strange cargoes from robot-controlled bases. Santa has been dropping off unwanted Christmas presents in this sector of the universe — and the Federation boss has told you he wants them back! Santa has chosen some really awkward spots to drop off the gifts — so you'll have to brave the dangers of the planet in order to complete your task. There are few landing sites, gravity is extremely strong — and you are running low on fuel. Something Santa never had to bother about! You'll score more points for a landing in a really difficult spot — so experienced pilots will score well. Full instructions are involved in the program. Happy landings!

**SINCLAIR ZX 81 16K
SPECTRUM 48K
ARON**

by Simon Mansfield
Aron is a complex simulation game for up to four players. Go back in time when the country was divided into huge estates. Would you accept the responsibilities of a Baron? Farm your lands, maintain workers, hire mercenaries, wage feudal wars? Early analysis of success or failure of our decisions. There are unexpected events in store. It you - to find out, why not play the game?
Graphics

**SINCLAIR ZX 81 16K
SPECTRUM 48K
ADMIRAL GRAF SPEE**

by Simon Mansfield
An original game of strategy based on historically accurate records of the Graf Spee's formidable presence in the North and South Atlantic. In her Captain use full graphic instrumentation to calculate speed, compass bearings, fuel, distance, ammunition status, locate and manoeuvre into visual range and destroy enemy ships which can also evade, seek and destroy you! Attacked targets can only be destroyed by the same number of salvos or torpedoes as were necessary for the forage during the original action. 7 levels of difficulty.

**SINCLAIR ZX 81 16K
SPECTRUM 48K
DUNGEONS OF DOOM**

by Simon Mansfield
Two challenging adventure games to travel through the labyrinths, ascending to the lowest dungeons where the treasures are hidden or die. "ESCAPE FROM THE UNDERWORLD" and save yourself from incarceration in the dungeons by lighting your way up the endless eyes. Graphics show your position - status reports - different layout with each new game - 4 players can search different levels - 400 rooms - 600 corridors - 1000 locations to explore. Objective - to score highest points and STAY ALIVE.

**SPECTRUM 16K
LAS VEGAS**

by Neil Streeter
A Temptation games double.
1. FRUIT MACHINE - must be the best full feature "Pub" Fruit Machine. Spin the symbols, use the "nudge" "hold" "gamble" facility - win or lose with true percentage payouts.
2. BLACKJACK - break the bank with a live card trick. This game follows the rules of Pontoon. The Spectrum computer deals the cards with skill and is after your stake money.
Superb graphics.

**SPECTRUM 16K
CHALLENGE**

by Neil Streeter
A Temptation games double.
1. MASTER CODE DELUXE - all the features of the well known game, 9 skill levels - any code or no repeated colours. Good clear graphics show the success or failure of your logic as the computer assesses each line.
2. HIGHER AND LOWER - skill hunches and sixth sense are needed to beat this fast dealing machine. Graphically as realistic as a certain television series. Will you be able to get to the end of the row of five cards, guessing whether the next card will be HIGHER or LOWER?

**SPECTRUM 16K
GODZILLA AND THE MARTIANS**

by Neil Streeter
The Martians have invaded, destroying the molecular structure of earth's atmosphere to make it compatible with their own planet. "The girl of your dreams" is trapped at the top of a building site but for the moment protected from the evil invaders by a friendly Dinosaur! Leap over deadly Martian invaders - scale ladders - jump the man traps - rescue her before the oxygen is totally absorbed.
Kong type game for SUPERHUMANS.

ARCADE

**VIC 20 unexp
THUNDERFLASH**

by Andrew Haisley
The year 2500 A.D. has produced a problem: space Rats are using humanoid skills for experimentation! Their technical skills include impenetrable defence systems. A Royal Space Fleet Pilot sent to destroy them has been killed. YOU ARE INVITED TO TAKE HIS PLACE.
You will be bombarded by zig-zagging steel arrows - if not destroyed they turn into Thunderflashes which explode when hit. Being unstable they release sparks which you must destroy before they hit you. Your survival angers the Rats who increase the speed and fury of the attack.
High scoring game.

ARCADE

**VIC 20 unexp
ALIEN VORTEX**

by Andrew Haisley
It is the 23rd Century - unemployment 99.9% - due to 300% inflation, money replaced by credit discs - to relieve boredom the I.R.S.P. sets up huge gambling arcades - debts run high - inhabitants who cannot pay take part in "THE GAME" Transported to Launch Base 3 they are sealed into a Zetton Earth Defender and attacked by waves of mutant birds, specially bred on the Space Station Alien. Moneylenders bet on the length of the ill-fated player's survival, so recovering their losses. SET your body modulator to HYPERDRIVE: PRIME your firing fingers and HANG LOOSE.
High scoring game.

ARCADE

**VIC 20 unexp
SWARM**

by Andrew Haisley
As a pilot testing the latest star ship, breakdown in your guidance systems causes you to materialise in the breeding grounds of the Psigophorus, an unbelievably nasty insect life form which kills anything entering its space. Survival depends on destruction of the eggs before they hatch to form a SWARM. They can use your laser energy to mutate at an alarming rate and the only escape from the devastating attack of a Swarm is by destroying the Psigophorus in only one brief stage of its life cycle.
CAN YOU SURVIVE this high scoring game?

**VIC 20 16K
DRAGON 32K
MICROPOLY**

by Richard Fry & Simon Lacey
Play this version of the family board game with a competent and challenging microtanker and property tycoon. Slate of game and board on instant recall - or the game saved.
Game for up to four players AND the computer.

**VIC 20 Unexp
COBUS MAZ**

by Dave Gibson
A series of ridiculously impossible layouts which our self-destructing Programmer has devised for VICims! Just get from "A" to "B" without being blown up or eaten by a COBUS - simple? You are given five lives and five ZOGS to hyperSpace a COBUS when you are cornered. Successful exit brings the reward of greater challenge with progressively difficult layouts and hidden complications. Keys require collecting in a correct order to open the door, devilish invisible mines and

**TI 99/4A Ext. Basic
HOUSE OF BUGS**

by Tony Frampton
The Bugs in this game will raise your blood pressure to the limits and drive spectators into a frenzy! In this high scoring game killer bugs roam the top floors. Stay alive by clinging to the ceiling whilst they pass beneath, but you cannot seek refuge on that square again. BUNGE a Bug and gain 50 points, but he may return for his revenge - a vicious ritual followed by your paralysis and death! WATCH the Bugs go hopping mad when target scores give you the services of a Masterer.
Fantastic graphics and sound.

**TI 99/4A Ext. Basic
TANK BATTLE**

by Tony Frampton
Can you hold back a relentless army of tanks, sometimes in convoy but often slipping in under the cover of their barrage of gunfire as they try to penetrate your anti tank barriers? Manoeuvre your tank controlling its gun barrel for accurate range. WATCH your salvos disintegrate the enemy BUT BEWARE the deadly return fire. Realistic graphics and sound. Five skill levels - strategy to desperation.

**TI 99/4A Ext. Basic
SPECIAL MISSION**

by Tony Frampton
TOP SECRET - save the world from destruction - HOW? WHY? WHEN?
Your mission starts in a large briefing room - there is a door to the East. You can see a blood stained envelope and a cold strong box, you are carrying nothing at all! TIME is running out, the robots have been activated - WHAT ARE YOU GOING TO DO? Only a T.I. trained special adventure agent has a chance of saving millions from annihilation.

NEW

**DRAGON 32K
SEARCHWORD**

by Ian A. Macey
A WORD PUZZLER'S PARADISE! CREATE your own word puzzles by the thousand.
An irresistible game for word puzzle enthusiasts, this program offers endless permutations. The computer will accept any list of words containing from 3 to 12 letters and conceal them within a letter grid until the player identifies them by giving the correct start position co-ordinates and direction. Program also includes two demonstration files and word save facility. Hours of enjoyment for one or more players.

Illustration: Terry Rogers

Whoooooosh! Hi there. This ski-ing lark is good fun isn't it! Now, thanks to Mark Vasey, you won't even have to get out of your armchair to enjoy the thrills and spills of this most popular winter sport. All you have to do is ski down the mountainside avoiding fallen skiers, trees and spectators who have gathered at the edge of the track to laugh at you when you fall over.

After 200 metres down the slope night will fall and you'll have to use all your skills to stay upright! The same thing happens once you've managed to ski 670 metres down the slope. At the end of each game the distance you've managed to travel and your high score will be displayed. Full instructions are included in the program.

PROGRAM NOTES:

10-20: characters. 130-135: instructions. 137-160: ground movement. 200-230: man movement. 310-335: checks for collisions. 340-396: end routine.

3 MAGICAL GAMES FOR THE 64

CRAZY-CAVEMAN - Journey back to prehistoric times! A tribe of cave dwellers sends out a hunting party, but the men are scattered when they are ambushed by a huge sabre-toothed tiger! You are one of these hunters: a long way from shelter, you begin the hazardous trek home. On the way there are many dangers, like ROLLING ROCKS, DINOSAURS, DODOS AND PREHISTORIC BIRDS.

£6.50

PIXIE PETE - Deep, deep down underground, PIXIE PETE the pot-holer is digging for his survival. You control this dauntless pixie, and must help him dig his own maze to escape from DESMOND THE DRAGON for as long as possible, but if he comes in range: quickly engage your HYDROLIC RAM PUMP to blow him up. If you manage to destroy DESMOND he will return to haunt you as GORGO THE GHOST who causes many problems for PETE.

£6.95

BLUE MOON - You are the pilot of an intergalactic spacecraft. Your mission is to rescue a sister-ship and her crew who are trapped on a hostile planet and to return with them to the safety of the Blue Moon. However, journeying across the vastness of space there are many hazards to negotiate, such as the deadly BLUE BOUNCERS, COMETS, BELL BIRDS, DROIDS and TECOM ALIENS.

£6.50

HEWSON CONSULTANTS

3D SPACE WARS

3D SPACE WARS
For the 16K or 48K
Spectrum

3D SPACE WARS
Fast and furious action. Joystick or Key-board control. Locate the Seiddab on your galaxy scanner. Scour the star studded blackness for your first sight of the enemy. Track their course and react rapidly as they try to break away. Let them grow in your sights and punch the fire button as they come into range.
16K or 48K Spectrum.

£5.95

3D SEIDDAB ATTACK
Spectrum
16 or 48K
HEWSON CONSULTANTS

The Seiddab have broken through the Earth's defenses and are attacking the cities. You are patrolling the city streets in the latest Knat Tank with its surface to air missiles.

Trundling along you observe the tell tale blips of the Seiddab as they appear on your scanner. They break formation and scatter across the city. Suddenly you catch sight of an alien craft swooping over the buildings to your right. He fires a plasma torpedo at your tank. You attempt to dodge but the missile finds its mark, shaking your tank and leaving a hole in the armour.

You unleash a missile and guide it accurately to the target. The Seiddab explodes and crashes from sight. You hunch over the controls once more, because this is only the beginning...

£5.95

3D SEIDDAB ATTACK

This game incorporates moving 3D graphics of city buildings and alien craft. It gets progressively harder with two types of landscape. 3 lives, high score, player one and player two score.

We are on the lookout for high quality simulations for all the popular home computers. Top royalties paid. Send in your samples today for fast evaluation and prompt reply.

Selected Hewson Consultants software is available through John Menzies, larger branches of Boots, all leading micro computer retailers and software stockists.

If you have any difficulty obtaining these products locally, then mail order to HEWSON CONSULTANTS LTD., 60A, ST. MARY'S STREET, WALLINGFORD, OXON. OX10 0EL.

ALIEN ATTACK

Earth is under attack! Not again, I hear you groan. Well it is, and it's up to you to stop moaning and get out there and fight those irritating aliens who keep causing so much trouble around the galaxy. Your city is defended by three laser bases — these are activated by pressing the "1", "2" and "3" keys. To kill the invaders, you must position your sight on target and fire away in a similar fashion to that arcade favourite, Missile Command. Your city is also protected by a force-field — which is gradually worn down by alien fire. If they manage to get through the force field and reach the city then you'll be destroyed!

A new force field is generated after every third wave of alien attackers has been destroyed. Also after every third wave, the speed and numbers of aliens increase — but you do get bonus points for every three waves you manage to wipe out. Full instructions are included in the program.

We're not quite sure whether the World's ready for these games . . . but we've released them just the same.

DRAGON 32

The Marcon Empire have invaded Earth and enslaved the population. An endless stream of stellafreighters now plunder the earth's mineral wealth, draining the very lifeblood of the planet.

A small band of freedom fighters are still operating from an abandoned mining station on the Moon; one of them is you.

As you set out from your secret base your first objective is to manoeuvre through the barrier of lethal space mines to one of the enemy re-charging stations to re-charge your neonium lasers; then you will be able to carry on with your mission of destroying the marauding stellafreighters.

There is rumour of a Marcon munition station near by, heavily defended by missiles. If only you could locate and plunder it; your heroic band of avengers would then have enough fire power to strike a massive blow for freedom . . . or die in the attempt . . .

Avenger is for the Dragon 32.

Tension mounts as your Stratofighter enters the patrol area. Enemy Skyfreight Convoys are increasing as their need for Ironon Ore grows in the arms race against you.

Your raydon missile sight picks up an enemy convoy entering your quadrant. You select hyperdrive and are slammed back in your seat. Fingers hover over firing buttons as enemy fighters peel away from the convoy to engage you. As your epic battle begins the enemy Skyfreighters unleash wave after wave of air to air missiles against you. The battle rages on and your will to survive and determination to win increases. The convoy must be destroyed; your people are depending on you.

Night falls and glaring explosions fill the sky; don't let your concentration wander, if the convoy gets through your people are doomed. you must succeed; you must . . .

Attack Attack is for the Commodore 64.

Your mission: destroy the Etron rocket base on the planet Hagon.

Piloting the most sophisticated space fighter yet conceived you know that if your mission fails the awesome Etron rocket attacks will destroy your galaxy.

Entering the fearsome space tunnel; the first of Hagon's many sophisticated defence systems; every fibre of your being is filled with dread.

The Hagon fleet have been alerted and wave after wave of Astrofighters come hurtling toward you. As you battle your way to the end of the tunnel you begin to realise just how suicidal this mission could be.

Zooming through Hagon's defensive asteroid belt your concentration intensifies; you have only a fraction of a second to differentiate between asteroids, space mines and Etron rockets as they flash toward you.

Hugging the planet's surface, dodging defence poles and trying to deal with everything else the Hagon's throw at you, you remind yourself that the fate of an entire galaxy rests on the outcome of your mission; you must succeed . . . Quasar is for the Commodore 64.

Any of these games for just

£5.99
each

including a lifetime guarantee and dispatch back to you by return of post

Your wish is your command.

In another time, another world, not too far away from your own front room, you can be in command of . . .

1. **Zaxxon** by *Datasoft*.

You're the pilot. Climbing, diving, swooping in on an enemy fortress. A barrage of missiles and gunfire will try and stop you. Just when you think you're through, a powerful robot's lethal homing missile zaps you...or does it?

2. **Frogger** by *Sierra On-Line*.

Now you're a frog stranded a long way from home. A perilous journey awaits you. Once across the busy motorway, a surging river full of logs, turtles and alligators awaits. Better flex those Froggy leg-muscles though, the bank is steep, so look before you leap!

3. **KoalaPad Touch Tablet** by *Koala*.

You can't overfeed this Koala — he'll make his own menu selections. He'll also move game players, make musical notes, draw computer graphics and much more. The KoalaPad Touch Tablet is an accessory that'll enhance the capabilities of your home computer system.

4. **Sea Dragon**

by *Adventure International*.

Take a deep breath — you'll need it to navigate your sub through a labyrinthian underwater passage to free the menace of the imprisoned Sea Dragon. Mines, electrifying eels and lethal laser beams await you in this murky underwater world. You've limitless torpedoes, but limited air, so hurry!

5. **Turtle Graphics II** by *HesWare*.

This Turtle's about to paint the town red. Or green. Or blue with pink spots. By teaching him to paint, draw and colour he'll teach you, painlessly and enjoyably, the basics of computer programming — maths, logic, communications and more with over sixty commands. Ideal for children from six to sixty.

6. **Choplifter** by *Broderbund*.

Sixteen hostages are holed up in an inaccessible barracks. Only an ace chopper pilot can free them — you!

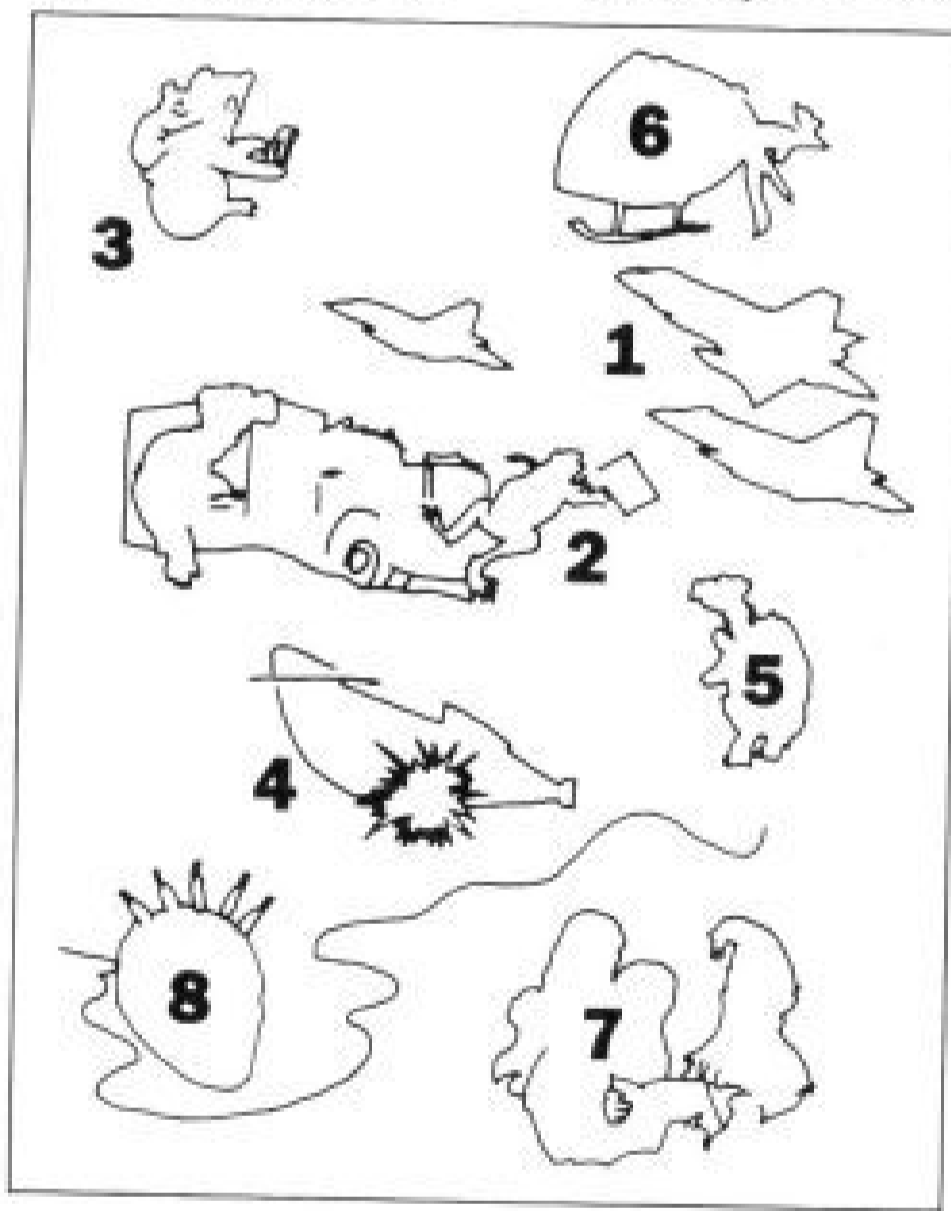

Watch out for the tanks, they'll crush anything. They're just for starters — fighter jets and the awesome homing air-mines are yet to come. Good luck . . . you'll need it!

7. **Kids and the Apple/Atari** by *Datamost*.

These books will teach you, simply, how to write your own programmes. Step-by-step instructions teach you how to create your own action, board and word games. Programme your finances or even learn another language — whatever you do, you'll get the most out of your home computer.

8. **Suspended** by *Infocom*.

20 miles beneath the earth's surface your brain is wired to a computer network. You'll strategically manipulate 6 robots to overcome a myriad of realistic and original problems as you try to maintain surface-side equilibrium. But don't worry, the end is in sight — you're only there for 500 years!

Phew, back to earth! Now beam yourself over to your local dealer and check out his software. He's got just about everything, we should know, we supply it.

BY DAVID WATERFIELD

RUNS ON A BBC IN 32K

REVERSI

Reversi, like chess, is one of the most popular board game conversions among micro owners. The rules for the Beeb version are exactly the same as the standard game — the difference is that in this version you are up against the computer and not a human opponent.

The rules of the game are very simple. You cannot place one of your pieces next to a counter of your own colour. Each player takes alternate turns to place a counter on the board. If any player can't move or doesn't wish to move for tactical reasons, the play can be passed to the opponent.

The object of the game is trap a row of your opponent's counters between your pieces. If you succeed, all the pieces that have been captured change to your playing colour. The best winning tactic is to occupy as many of the corner squares as you can. This puts you in a powerful position, allowing you to attack the computer's pieces without endangering your own counters.

At the beginning of a game, you are given the option of moving first or allowing the computer to do so. To enter a move simply press the number of the square you wish to move — followed by the corresponding letter. Illegal moves will be rejected and if you cannot move you should enter "I".

At the end of a game, when the board is full or when neither player can move, the score is added up and the winner announced.

The BBC Micro can now give your children a private education.

The BBC Microcomputer now accounts for 80% of the computers being ordered under the current D.O.I. Primary School Scheme.

It's also the computer which a rapidly increasing number of people are choosing for their homes.

One of the reasons for its success is that it makes learning highly entertaining for everybody. From children who are getting to grips with the alphabet, to adults who want a gentle but intensive introduction to the complex world of computing.

Now, there's a substantial new catalogue of educational programs specially for the BBC Microcomputer.

It has been developed by Acornsoft, the software division of Acorn Computers who manufacture the BBC Micro.

Making faces without getting scolded.

With the new Facemaker program, your children can make over a million faces. It's like an identi-kit, allowing them to depict anyone they want. They start by choosing the eyes. Then they can choose the mouth, the ears, the nose, the facial outline and the hairstyle.

And if they really fancy dressing up, they can add earrings and hats.

In doing all this, they learn to read and spell, as well as developing their powers of description.

The money program, two games for the price of one.

Mr. T. is an engaging little figment of the microchip who can teach your children all the complexities of our coinage system.

His Money Box program has two games, each of which can be played at different levels.

In Money Match, the challenge is to collect a set of coins, matching them according to shape, size and value.

In Money Box, you can give your child and Mr. T. a helping hand to get all the coins on the screen into the box. (It's always different, because the coins on the screen are based on the small change you have to hand.)

A chance to teach the Micro a thing or two.
With the Animal, Vegetable, Mineral program, the children can get the computer guessing.

They think of an object. The BBC Micro has to decide what it is.

If it doesn't come up with the answer, the children can keep giving it hints.

In doing so, they are encouraged to question the difference between such things as crocodiles and alligators, or whether oil is vegetable or mineral.

The program also encourages them to consult refer-

ence books so that they can ask the computer increasingly tough questions.

Questions on Julius Caesar from J. Julius Norwich.

John Julius Norwich's History Quiz is one of the new BBC Micro Grandmaster quiz series which also covers theatre, crime and detection, music, science fiction and royalty.

On the history front, there are 300 brain-testing questions, covering all aspects of British history from Julius Caesar to Margaret Thatcher.

And to increase the educational value, Mr. Norwich has posed the questions from angles which will give a broader understanding of events.

For the full catalogue, clip the coupon.

There are thirty more new BBC Micro programs in Acornsoft's new catalogue.

For a free copy, complete the coupon, or telephone 0933-79300. Or ask your local BBC Micro dealer.

If you're not yet a BBC Micro owner, you can get full details of the computer at the same time.

To Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL. Please send me the new Acornsoft catalogue "At Home With The BBC Microcomputer."

I would also like details of the BBC Micro (tick)

FOR SPECTRUM AND DRAGON SOFTWARE

BARMY BURGERS
SPECTRUM 48K

BLABY COMPUTER GAMES

BARMY BURGERS Baps, Burgers, Cheese and Lettuce — they are all there, all you have to do is put them together. It sounds easy doesn't it, but not when you are being chased by a fried Egg and Sausages! **48K M/C £5.50**

KILLER KONG
SPECTRUM 48K

BLABY COMPUTER GAMES

KILLER KONG Featuring five screens of arcade action — Elevators — Kong — Mario Barrels — Hamburgers — and even Mario's Girl. **48K M/C £5.50**

'GOTCHA'
SPECTRUM 48K

BLABY COMPUTER GAMES

GOTCHA After escaping from the local Nick, Ernie is soon back up to his old tricks again! **48K M/C £5.50**

HIGHRISE HARRY Featuring Harry High-rise and the Rust Bugs — Guide Harry the Painter along the Girders, up the Ladders, onto the Lifts, but mind the Slides. Five Whacky screens. **48K M/C £5.50**

DODO Starring Dodo and the Snow Bees — You are the last surviving breed of Dodos alone in the Antarctic surrounded by Ice Blocks and Snow Bees. Slide the Ice Blocks onto the Snow Bees or electrify the walls to kill them. **48K M/C £5.50**

SHUTTLE Guide your Shuttlecraft down to the surface of Planet Nexon, rescue the stranded Space Patrol and return them one by one to the safety of the Mothership. **48K M/C £4.95**

PLUGGIT Young Percy Pluggit must get back to his Circuit Board in time, please help him to find the right Keys. **48K M/C £5.50**

CONFUSION You are totally confused and are being attacked from both sides by the most nastiest Aliens known in the Universe. **48K M/C £4.95**

GOLD DIGGER Dig your way through the Mine and find the Gold Nuggets, but keep away from the 'Nugget Gnashers'. **48K M/C £4.95**

KOSMIC PIRATE Guide your Pirate vessel through the massive fleet of Space Craft that has encircled the planet Verox and try to steal your essential needs. **48K M/C £4.95**

CHOPPER RESCUE Scientists are being entombed under Radio Active waste, can you as a Helicopter Pilot, rescue them all in time? **48K M/C £5.50**

Illustration: Terry Rogers

Briky is a happy little brick-layer. He's never more content than when he's got a wall to build. But there are things that upset him — bombs and moles. Both are capable of destroying his carefully constructed walls. You can help Briky build a brave new world by guiding him around the screen. You cannot stop — so you have to be careful not to bump into your own walls. Occasionally those moles and bombs appear at random on the screen. If you build your wall over a mole, you'll get a bonus of 10 points. If you hit a bomb, you'll lose two of your five lives. After every 100 points you get a bonus life and a new screen to play in. But each screen gets smaller — making Briky's life harder. Full instructions are included in the program.

RUNS ON AN ATARI 400/800 IN 16K

BY GRAHAM WARD

BRIKY

As your children so can you

600XL Home Computer.

If you're buying a home computer then you've probably got one major worry. That your children will soon grow out of the system you buy.

With the new ATARI 600XL™ you need have no such fear. Because the ATARI 600XL was not just designed as a home computer, it's designed to build into a complete computer system.

As your children's knowledge of computers increases, so can their home computer, simply by adding any of these extras which will be available soon.

Program Recorder. The inexpensive way to store extra programs, and use the unique Atari sound-through system.

64K Memory Module. Increase the memory from 16K RAM to a massive 64K RAM. Important, as the more memory it has the more it can do.

Touch Tablet. Creates complex on-screen graphics by allowing you to draw on the TV screen.

Trak Ball™ Controller. For a better and more sophisticated arcade style game control.

...ren get bigger Atari 600XL.

Program Recorder.

64K Memory Module.

Touch Tablet.

Trak Ball™ Controller.

Super Joysticks.

Colour Printer.

Disk Drive.

80 Column Dot Matrix Printer.

Letter Quality Printer.

SuperJoysticks. Gives you a greater competitive edge over your games.

Colour Printer. You can print out your own four colour electronic designs and programs.

Dual Density Disk Drive. Increases your capability by giving you fast access to data, as well as an efficient expanded storage system.

80-Column Dot Matrix Printer. This is for more complex applications with fast telex style print-outs.

Letter Quality Printer. Changes your computer

into a sophisticated word processor, producing as many top quality prints as you want.

Of course, you won't need them all now. Your children have first got to learn to master the computer itself. But when they have, and believe us they will, the ATARI 600XL can handle it.

For more details write to: Atari International (UK) Inc., P.O. Box 407, Blackhorse Road, London SE8 5JH.

The new Atari XL home computer system.

Look at some of the things you'll miss if you don't visit the next ZX Microfair.

Are you missing out on everything that's right for your ZX machine?
Do you want to see the latest developments in hardware, software,
books, peripherals and gizmos?

Then there's only one venue that's a must for you.
The 10th ZX MICROFAIR at ALLY PALLY on the 4th February 1984!

GET YOUR ADVANCE TICKETS NOW!
10th ZX Microfair.
Ally Pally February 4th.

Saturday 4th February 10am-6pm
ALEXANDRA PAVILION, ALEXANDRA PARK, WOOD GREEN, LONDON N22
Advance Tickets from: Mike Johnston, 71 Park Lane, Tottenham, London N17 0HG.
Prices: Adults £1 Kids (under 14) 50p. Parties of 10 or more at 10% discount!
Please make cheques payable to ZX MICROFAIR and enclose S.A.E.

Prices at the door: Adults £1.25, Kids 60p

Exhibitors — phone Mike Johnston on 01-801 9172 for details!

There's hundreds of exhibitions, lots of bargains, and usual friendly atmosphere with a Bring-and-Buy Sale, User Groups, Refreshment areas, and bars!

All in all a good day out... and a good chance to see everything concerned with Sinclair Machines!

By British Rail
From London (Kings Cross or Moorgate) — about every 10 minutes to Alexandra Palace station — free shuttle bus or short walk from there!
From any part of the U.K. enquire from Kings Cross Travel Centre, London N1 9AP (phone 01-278 2477) about special day trips to the ZX MICROFAIR!

By Road
Follow signs from the A1 (Links with M1 and North Circular). Plenty of parking space available!
Variety of routes from Central London.

By London Transport
Underground: Victoria Line from Victoria (also Oxford Circus, Kings Cross/St Pancras) to Highbury and Islington — change (cross platform) to BR Suburban Service to Alexandra Palace — free shuttle bus or 5 minute walk from there!
Alternative: Piccadilly Line (from Heathrow etc) to Finsbury Park or Wood Green — Link with N3 bus service to the fair.

10th ZX MICROFAIR
ALEXANDRA PALACE
FEBRUARY 4th 1984

**Sometimes even
the best of friends
need something
new to say
to each other...**

“I want

To get that excited feeling back again.
Lots more software. But I can't afford it all the time.
Lots of new programs. I know all mine backwards.
To swap notes with other people who love computers.
To know more about computers. And to use what I know.
Most of all I want my computer to do more!

and I don't want

To have a lot of hassle.
Or spend a fortune.
Or have to tramp for miles to find it all.”

Prestel™ and the Prestel symbol are trademarks of British Telecommunications.

You get

An amazing new world of fun and learning. A system that puts more muscle into many popular makes of micro. Dozens of free computer programs and scores of exclusive software bargains. *Through your own 'phone line.* A whole sophisticated 2-way communication system. Prestel™ – the world's biggest viewdata system, under your control.

and you don't have to spend a fortune to get it all now.

This issue of *Computer and Video Games* is choc-a-bloc with masses of great games listings — 48 extra fun filled pages — so let's not hang about! Program Extra has two tips for micro-programmers and a new feature, Down to Basics, but let's kick off with a look at David Waterfield's game for the BBC — Reversi.

David Waterfield's game Reversi is a very good example of a well written program, tackling difficult problems with excellent ideas and short snappy programming. This is highlighted by David's approach to solving the problem of drawing up the playing board without having to write a game the length of a novel. Using FOR NEXT loops and lots of variables, David has managed to write a really compact little routine to do the job.

This has inspired Program Extra to encourage you to get programming. So we have come up with a short procedure to create a chess or draughts board on the BBC computer. The program can be easily modified to suit your needs. And if you feel like creating a brand new board game of your own it will help too!

This short program for the BBC demonstrates how it's possible, with a good programming style, to write short listings to solve problems that appear to be complex and tiresome.

Drawing a chess board is an excellent exercise to attempt, because it involves some tricky problems, but also requires the programmer to structure the routine or else succumb to writing reams of code and end up with a very messy game. The program uses two loops, one to draw each row of squares and the other to draw each column.

The IF . . . THEN statements are used to decide if a row begins with a black or white square and variables are used throughout to carry the drawing co-ordinates and the colour to be used for filling. Furthermore, the entire routine is held in a defined procedure which can be easily incorporated into any program with ease.

```

110DRAWX+T,Y+T
```

```
120PLOT85,X+T,Y+T:X+T
130NEXTC
140Y=Y+T:X=150
150IFR MOD2=1 THEN A=0 ELSE A=1
160NEXTR
170ENDPROC
```

In our last issue, Down to Basics discussed the merits and demerits of Basic and its rivals. This month we'll be taking a closer look at Basic's structure and hopefully get a greater understanding of how it operates. First of all we should take a look at the heart of all computers, the microprocessor.

The microprocessor is the most important chip in a computer. If you've ever seen inside a micro, chances are that the largest chip in there would have been the microprocessor itself. It is also known as the Central Processing Unit, or CPU and this name helps you understand what it does.

The CPU is the chip which controls all the others and which actually does the work when you run your program. If a calculation needs doing, which happens hundreds of times every second, the numbers are brought from the memory chips into the CPU which does the work, and then places the answer back into a memory chip.

Whenever you see something moving across the screen in a game, it is the CPU which is controlling that movement. The way it's done is to put the character you wish to move at a point on the screen. Then, after a very short delay, erase it and put it slightly further along. If you keep doing this fast enough the object will appear to move.

The important thing to realise about the CPU is that, although it can work very fast (it could easily handle many thousands of long multiplications in less than a second), it can only do one thing at a time. So if your computer is playing a game of Pacman, the computer can't move that ghosts around the screen, make the sound effects and check to see what keys you're pressing all at the same time. Programmers get round this problem by making the CPU do each job for a short time in turn. If the program is well written, this should happen fast enough to give the impression that all is happening at once.

That about winds it up for this issue except to remind you that if you have any problems with the listings in *C&VG*, or just want to learn more about how the games work, drop Program Extra a line to *Computer and Video Games*, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

Write to Program Extra at *Computer and Video Games*, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Please mark your letters "Program Extra". Remember we'll pay £10 for any tips or short programs we print.

YES, to celebrate our second birthday we are offering membership of both our T.V. Games Hire Club *and* our Computer Software Hire Club for the price of a *single* membership!

Brighten your winter evenings with the very latest games such as Robot Tank, Popeye, Tutankham, Super Cobra, Q-Bert, Dig Dug, Fathom and Moon Sweeper.

Just £10 will bring you Life Membership of both of our clubs. Rental is from only 25p a day, with *no* postal or packaging charges and *no* hidden extras. Membership also entitles you to purchase software, cartridges and consoles at special discount prices.

REMEMBER BIG BROTHER (AND ALL OF THE FAMILY) ARE WATCHING US IN 1984.

SOFTWARE LIBRARY FOR SPECTRUM

Low cost weekly hire of the best arcade games, adventures, utilities, languages and business programs.

- Membership only £6.00 for 12 months.
- Program hiring from only 80p (plus 25p p&p).
- Free fully descriptive catalogue for members.
- New titles constantly being added.
- Purchase new programs at discount prices.
- Return of post service.
- All tapes despatched using first class post.
- We have full permission and licences from the leading software publishers, to whom royalties are paid.

Compare these features with our competitors and you will see why more Spectrum owners are joining the Kernow Software Library. Join today by clipping the coupon below or send a S.A.E. for further details.

YES, please send me my free catalogue and selection sheet. I enclose my £6 cheque/Postal Order.

JAPAN

the lan

Once upon a time, Namco was a rather obscure company which manufactured small fairground rides which were placed on the top of department stores to keep the kids happy while their mums went shopping.

The turning point came when Namco bought up Atari Japan Inc. in 1974. Although Atari was the world leader in the video game industry at that time, it did rather badly in Japan due to lack of experience.

Despite some financial difficulties at the outset Namco went on to do some basic research into the American video games technology.

So it was not until 1977 that their first product, Galaxians invaded the Japanese arcades. The timing was just right. People were getting fed up with the original Space Invaders and wanted something new.

Galaxians did exceedingly well but their best seller was still a gleam in a hungry software experts eye.

When Namco released Pacman the company's profits rocketed.

The idea of Pacman was devised by one of Namco's software specialists. One day he was so hungry that he imagined himself eating a pizza. This train of thought led him to picture a pizza with a piece cut off, looking as if the bigger portion was trying to eat the smaller one. Then he thought to himself: "Why not write a game about eating?"

From this bright idea Namco's development team added various ideas such as the ghosts and the power pills and unleashed a little yellow monster on the world!

Contrary to the popular belief Pacman is Japanese; Atari merely holds the rights to produce the home computer and home video versions.

All in all the game took about 12 months to develop. The name Pacman derives from the Japanese word "paku paku" which describes the movement of the mouth when eating.

The reason for the great commercial success of Pacman — apart from the originality of the game — is attributed to

Japan was the only country in the world which had to mint more coins in order to satisfy the enormous demand created by the arcade boom caused by the original Space Invader machines. The company which created those first Invader machines made a huge killing while arcade centres and even Space Invader coffee houses sprung up like mushrooms. People queued for hours to play the Invaders.

All this led to the creation of more than 200 companies trying to cash in on the very lucrative arcade industry. This is a story of one such pioneer of the arcade video games, Namco. Virtually unknown in this country, Namco is the most exciting arcade company in Japan.

When the Space Invader boom began to wane, the game was quickly followed by the Galaxian. This development of the alien invader theme was an instant success. Galaxian was Namco's very first video game and since then the company have gone from strength to strength. Tom Sato looks at the Japanese video boom.

the fact that Namco licensed two American companies to produce Pacman for the U.S. market.

Thanks to Atari, the U.S. market is about five times that of Japan and about 10 times that of Europe.

Namco licensed Midway to produce the coin operated arcade machines and Atari to sell the home video game versions of Pacman.

Atari splashed out on a national T.V. advertising campaign and soon Pacman became a household word. The sales of the Pacman cartridge can only be described as explosive! Namco earned millions from the royalties.

The reason why Atari sued Commodore and others over breach of copyright of Pacman is simple. While Atari paid millions to Namco, Commodore and the rest of the copycats didn't pay a cent.

But the licensing of Pacman didn't stop at the video games. Soon, there was Pacman sports gear and Pacman toys everywhere.

It is said that Namco earned more than three times as much from royalties generated by the Pacman character than from the actual video game! *Time* magazine commented, in April 1982, that Pacman's income will exceed that of the movie *Starwars*!

Apparently, one cornflake manufacturer put a Pacman picture on the packaging and the sales took off.

However, all is not well for Namco. In Japan, there are people who pirate arcade games. Although it may appear to be rather difficult to produce "clones" of sophisticated arcade machines, there are a number of technological pirates about in Japan.

Namco has no less than 20 full-time detectives investigating piracy, using sophisticated spying equipment to catch the pirates.

Last year, Namco developed the now hugely successful Atari game called Pole Position. The development of Pole Position cost the company well over three-quarters of a million pounds and has some of the most convincing graphic 3D effects so far seen on an arcade machine. It incorporated some custom made integrated circuits in order to prevent the pirates making "clones" using commercially available micro-chips.

It sounds incredible — but within two months, there were pirated Pole Positions available on the black market at half the price of the original!

This time Namco was determined to catch the pirates red handed so they sent out all of their detectives to monitor known secret laboratories and hide outs.

The whole operation came to a dramatic Hollywood style end when they tailed a truck believed to be on its way to pick up a consignment of illegally produced Pole Position machines.

They eventually reached a secret factory 1,000 miles away from Tokyo and apprehended several pirates and confiscated 20 "clones", renamed Top Position. Sounds like something out of *The Sweeney*, doesn't it?

So how do the pirates make these "clones"? As soon as an original arcade machine is released they get hold of one and disassemble it, obtaining photographs of the printed circuit boards and names of the chips it uses.

The custom-made chips are opened

nd of the rising clone

up and analysed using micro-photographic equipment. Once they work out how the chip works they then produce a circuit to do exactly the same thing.

This process is called "reverse technology" and the ironic thing is that much of Japanese industry started off using this technique.

The pirates who analyse the originals are quite skilled, and are sometimes engineers working for large computer manufacturers and moonlighting. They are equipped with mainframe computers and electronics equipment costing hundreds of thousands of pounds. They see creating a "clone" as a challenge.

They pass-on the information to other pirates whose exclusive function is to set up an overnight factory in a remote part of Japan and mass produce the "clones". The marketing is handled by other pirates who specialise in this field. The whole operation is master-minded by organised crime syndicates.

They regard arcade piracy as being safer than drug trafficking.

Namco has just released a sequel to Pole Position called Pole Position Pt II. It gives you choice of four racing circuits

and the backgrounds are more detailed than before.

Most arcade players in Japan really go in for convincing backgrounds and in Pole Position Pt II, there is one circuit which has a multi-level crossing and a fairground with a big wheel and roller-coasters! Also the car crashes in a more realistic fashion. You see the car break up into bits while the wheels bounce away from the crash if you are unlucky enough to go off the road.

Just recently, two companies released laser-disc motor-racing games and it looks as if Namco could have been outsmarted by them.

Taito's Laser Grand Prix (*C&VG*, November) uses Laser vision which provides actual scenes from Fuji Speedway. The visual and sound effects are superb. Tazmi has a Pole Position-like game with no less than three screens to fill the whole of your field of view!

But one arcade fanatic commented that Namco always comes up with something really original. I think he is right. In 1984 I believe that Namco will release something extraordinary using laser technology.

The current trend in arcade games in Japan are sport simulations. There are now arcade games which feature anything from water-skiing to women's volleyball! It is very likely that there will be a convincing flight simulator game next year.

Another trend is towards micro computer software. Due to the fact that Sinclair's cheap micros never reached Japan and Atari's absence from Japanese home video game system market meant that the games software industry for home micro is relatively new in Japan.

Since there is a law in Japan to protect arcade games there is a lack of computer games converted from the arcade favourites. There is an awful lot of illegal stuff about, though!

Sega Enterprises — they made Frogger, Zaxxon and Buck Rogers, Planet of Zoom — have produced their own micro called the Sega 3000 to sell their original arcade games.

Namco too has joined forces with one of the leading software distributors called Dempa. Their first offering was, predictably, Pacman!

GAMES MACHINE

If you want to extend the capabilities of your computer or games machine there are now lots of bits and pieces which you can plug into the back to make it do things better or faster, or things which it could never do before. Such plug in goodies include extra memory, better keyboards, joystick interfaces, Micronet adaptor or devices to make the beast speak or play tunes. Robert Schifreen takes a break from Bug Hunting to bring you news of some of the current plastic boxes which you can plug into your micro or games machine. Upgrading your present equipment by using add-ons means that you may not have to buy that new machine after all!

EXTENDING YOUR ABILITY!

COMMUNICATIONS

Communications means making your micro talk or listen to other computers in their own language. They communicate either over the airwaves at radio frequencies or over the telephone lines.

Each has its advantages. Radio communication is only one-way whereas telephone can be both. But long conversations on the phone can be expensive. If you want to read more about this subject, dig out November's issue of *C&VG* and turn to page 114.

If you want to receive Teletext on your micro, you'll need a BBC model B with a Teletext adaptor. This lets you receive Ceefax and Oracle, which are information services broadcast by the BBC and by ITV. You just plug your TV aerial into the back of the adaptor, and the computer will do the rest.

The adaptor gives you four channels of teletext information; BBC1, BBC2, ITV and Channel 4. You can find out about such things as what's on TV tonight, the latest world news, sports news and ITV also has a kids corner with jokes and the like. Teletext is like a big electronic newspaper. You can read its pages on your TV but you can't write back to it.

The other method of communication is over the telephone. This is what systems like Micronet 800 use. This way, the computer can send messages and you can also type back.

There are loads of computers which you can dial into and most of them are free except for the price of the phone call. However, these free bulletin boards, as they're called, run on different baud rates (no pun intended) to Micronet so unfortunately you can't use a Micronet adaptor to call them.

You can buy a 300 baud modem quite cheaply from various companies, like Maplin Electronics who supply units for the Dragon, Vic-20, Commodore 64, Atari and Spectrum.

I tested the Atari one and managed to dial into some local systems and also used Maplin's own service called Cash-tel which allows you to order stuff from the Maplin catalogue via your computer by typing in your credit card number.

A lot of computer clubs run bulletin boards, and you can dial them up for computing news; you can also send messages to the club by typing at your computer. This is the two-way advantage gained by using the 'phone as opposed to the airwaves.

You can set up your own bulletin board with a Maplin modem, but you'll also need some software.

You will soon be able to buy a Micronet/Prestel type modem for your BBC micro from Acorn which has some better features than the Micronet package. But it's more expensive, and you'll still have to pay a fee to join Micronet if you want to look at their private areas on the database.

You can also buy slightly cheaper modems like the Micro-Myte which will not receive Micronet or other information systems, but will allow you to talk to your friend's computers, providing he or she also has a similar modem.

This way you can send each other programs or messages, but you'll have to phone him up first to tell him to switch his modem on!

The Micronet modems offer this person-to-person facility as well as normal Micronet use, but are slightly more expensive.

STORAGE DEVICES

When you finally decide that cassettes are too slow for your needs, you'll want to look for something faster. The best thing is a real disc drive which for micros will probably use 5.25" discs.

A cheaper alternative is a 3" drive which is available for many micros. You can buy a Byte Drive 500 3" system from ITL for about £250, and this contains a special cable to link the drive to your micro.

If you have two computers, or decide to change your machine, you just buy a new cable. Blank 5" discs start at about £1.50, but 3" systems use special car-

You can now fit two standard Atari-type joysticks to your Spectrum with an Interface 2. It plugs into the back of the computer, and also has a slot to take the new Sinclair software cartridges. The BBC (below) can now become a Teletext terminal with the new add-on from Acorn. As well as displaying pages of information, it can also store the data in memory and use it in its own programs.

At long last, the microdrive has actually been launched. As expected, demand is still exceeding supply and it will be some time before you can just walk into Smiths and buy one. They're not really disc drives at all, just miniature cassette recorders. You can load a 16K program from a Microdrive in about 10 seconds.

The byte-drive 500 is a 3" disc drive from ITL. The small discs are enclosed in rigid plastic and currently cost over £5 each. The clever part is the cable which links the drive to the micro. This contains all the electronics, so if you change micros, you just change the cable but keep the same drive.

tridges which are currently about £6.

The Byte Drive 500 will soon be available for the Dragon, Spectrum and Commodore 64. It is already available for the Oric, BBC and Apple.

If you have a Spectrum, the official Sinclair way of progressing from cassette is the Microdrive. This costs £50 for each drive, but you'll also need an interface which is another £30. You can store between 85 and 100k on a Microdrive cartridge, and a 16k program will load in about 10 seconds.

Microdrives are fast, but they're not really discs. Inside a microdrive cartridge is a loop of high quality tape, and the drive itself is just a very accurate (supposedly) cassette recorder.

If you've got a BBC then you'll need a disc interface fitted, which costs around £90. ITL has no intention at the moment of producing one, so you'll have to use the BBC one.

MORE MEMORY

The size of the largest program which you can fit into your machine is governed by the size of the area of memory in which the computer stores it.

The problem is that although memory chips are now quite cheap, some micros still have very little RAM, as it's called. One of the first enhancements which a computer owner will make in such a case is a memory expansion.

The ZX81 although very popular has only 1k of RAM. (1k is about two screenloads of program.)

It's very easy to expand your ZX81's memory. You can buy a 16k RAM pack which just plugs into the back of the machine and costs around £30. You may have heard of the much-feared contemporary disease known as "RAM pack wobble", caused by Sinclair not putting the edge connector on their RAM pack in the right place.

This disease can be fatal to a program, as a slight wobble at the wrong time can erase a whole afternoon's typing. One cure is a blob of something sticky under the machine, although a less messy solution is to look to a different company. You can also get 64k RAM packs which allow for even more

storage of data and programs.

Upgrades for the 16k Spectrum are available from Sinclair for £40, but you'll have to send your machine back to Clive, and you know how long that takes, don't you? Alternatively, you can buy a ZX81-like RAM pack which sits on the back of the machine, or some companies sell chips which you can stick inside, as long as you didn't really want the guarantee anyway.

If you're going to upgrade your Spectrum, check that the company's product will fit your particular machine. There are currently three different versions of the Spectrum in circulation and although they all look the same from the outside, there are some small variations inside which may make a difference.

Expansion for an Atari is easy; the memory comes in chunks of plastic which you install by removing the cover on top of the machine. Newer machines come with 48k but some old 400's still have only 16k. Your local dealer should be able to tell you how to improve this.

To expand a Texas TI99/4 or 4a you'll need a peripheral expansion box. This takes the form of a large aluminium crate about the size of the small freezer compartment in a fridge. (I don't know why, but everyone seems to measure the size of computers in relation to parts of fridges.)

Inside this you can then put disc drives, memory expansions and anything else. Retail price for the box alone was around £80 but that may drop now that the Texas micro is no longer being made.

Memory expansion on a Vic is peculiar. It is in the form of plug-in cartridges and comes in four flavours, which are 3k, 8k, 16k or 32k.

The annoying thing is that because the cartridge overwrites that part of memory which used to hold the contents of the screen, the screen RAM is moved to a different place.

The problem is that each cartridge puts it somewhere different, so programs written for use with an extra 3k will not necessarily run directly on a 16k machine without minor alterations. This is very inconvenient, especially for magazines who publish program listings!

If you're tired of having to do octopus impressions to play your favourite computer game a joystick interface is called for. This allows machines which normally have no provision for such a gadget to have one, and very useful they are too.

The most popular machine, which lacks a joystick interface, is the Spectrum, and there are now quite a few companies who will remedy this situation for you.

The official way is by use of the Sinclair Interface 2. This costs just under £20 — you get 5p change! — and allows two standard Atari-type controllers to be used. You can then write your own games using the joysticks to control the

AGF

PROGRAMMABLE JOYSTICK INTERFACE for Spectrum or ZX81

ONLY
32.95
+£1.00pp

MICRODRIVE
COMPATIBLE

ABOUT OUR INTERFACE

The AGF Programmable Joystick Interface is a unique design offering the use of any Atari-compatible joystick with absolutely all software, whether it is cassette or ROM cartridge, with the Sinclair Spectrum or ZX81.

The hardware programmable interface requires no additional software and accurately replicates the keys of the computer in a manner which is responsive to absolutely ALL key reading methods, both BASIC and Machine Code.

The interface does not interfere with key operation and can therefore be used simultaneously with the keyboard.

There is no need to remove the interface once fitted as the rear extension connector will accommodate further expansion, i.e. printers or RAM packs etc. This important feature avoids excessive wear to the expansion port.

The key replication principle pioneered by AGF means that your own programs can use eight directional joystick movement by utilising simple key reading BASIC.

Two joystick sockets are provided which share the same keys, for use with the majority of two player games. Several interfaces may be used on the same computer for multiple joystick applications.

The interface is programmed by a two digit code, which is looked up on a programming chart supplied, for each direction and firing button. The two numbers are then selected on a pair of leads which are clipped onto appropriately numbered strips on the interface.

Once configured this can be marked on a Quick Reference Programming Card for storing with the game. As the programming is *not* power dependent the interface retains the last configuration made and can be immediately used when next switched on.

KEY FEATURES

- ★ Programmable design gives TOTAL software support.
- ★ Accepts Atari, Competition Pro, Wico, Starfighter, Quick Shot, Le Stick etc.
- ★ Rear extension connector for all other add-ons.
- ★ Free demo program and instructions.

PACKAGE CONTENTS SUPPLIED

- Programmable Interface Module as illustrated, complete with clip-on programming leads.
- Self adhesive programming chart detailing how to define which key is simulated by UP, DOWN, LEFT, RIGHT, and FIRE. This can be fixed on to the case of your computer or if preferred the protective backing can be left on. The chart is made of a very durable reverse printed plastic and is extremely easy to read.
- One pack of ten Quick Reference Programming Cards for at-a-glance setting to your games requirements. The card allows you to mark the configuration in an easy to read fashion with space to record the software title and company name.
- Video Graffiti demonstration program which is written totally in BASIC to illustrate how all eight directions and fire can be read. This is also a useful high resolution drawing program.
- 12 months guarantee and full written instructions.

action, or buy commercial software written for use with the device. Interface 2 also allows you to use plug-in cartridge software, although these retail at £15 a time.

The problem with all the different joystick interfaces is that they use their own systems. So a program written for use with a Kempston joystick will not run on an Interface 2 unless the program contains a routine for each and you are allowed to select which one you want.

One way round this predicament is by a programmable joystick interface. Such a beast is the one from AGF. This comes with a grid of small holes and a set of five wires.

The wires are labelled with the functions of the joystick (up, down, left, right and fire) and the holes are labelled with the keys on a Spectrum keyboard. If the game which you want to play uses the 'K' key to fire, then you plug the 'FIRE' lead into the 'K' hole and so on. Such a device is very useful.

BETTER KEYBOARDS

When you finally tire of the piece of dead flesh known as your Spectrum's keyboard, there are a number of better ones around. The best are quite expensive at around £40 but they allow the whole machine to fit inside and look rather smart. One of the most popular around is made by Fuller. Kempston is also about to launch a high quality

keyboard for the Spectrum, as demonstrated recently at the ZX Microfair.

You'll also find replacements for the touch-sensitive keyboard of the Atari 400 from about £65.

If you have an Atari VCS and feel like getting into computing, you can now buy an add-on keyboard from Vulcan Electronics, which is made by Spectravideo. It sits on top of the VCS and plugs into the joystick ports and the main cartridge slot and you can then program your VCS in Basic. It costs £50.

Mattel Intellivision owners can also do the same to their machine. Mattel offers a similar device, as well as a music keyboard to enable you to compose music on your machine. I don't reckon Bach would think much of it, but it's not bad.

EXTRABITS!

SOUNDS AND SPEECH

If your idea of a good evening is being locked in a quiet room with a micro, then you could always get more friendly with it by talking to it or having it talk to you. But before those nice little men in white coats come to take you away, let me explain.

If you have a Pet, Vic, 64, Spectrum, ZX81 or BBC and need someone to talk to you then you could always try a Chatterbox. This costs £49 from William Stuart systems and you can program it to say anything you like. From the same company comes Big Ears which, for another £49, reverses the process and allows you to speak to your computer.

Say the word through the microphone a few times, and the machine will then remember it. If you then say it again, it should recognise what you're saying.

If it's a Spectrum you've got then the Currah microspeech is another possibility besides a Chatterbox. It works on the same system and sells for under £30.

BBC owners can also choose the official Acorn speech system, which is a computerised version of Kenneth Kendall. Personally I can just about recognise him, but many say that it might just as well be Moira Stuart. (In fact, I wish it was.)

If you prefer noise to plain speech then there are a couple of units available to improve the sound of a Spectrum by providing it with the same sound chip as the BBC and Oric.

WHAT'S LEFT OVER

Finally, we come to the rest of the oddments which space did not allow separate headings for.

If you own an Aquarius, then this year should see the introduction of the home controller unit. This plugs into the machine and allows you to control household appliances by using special plugs which go into the wall and receive messages from the computer. Such a system is also planned for the Electron.

If you have an Atari VCS then you may already know about the super expander. This lets you load games from cassette, and also improves the quality of the graphics slightly.

Printerface is a mixture of interface and printer and is a device to let you link a printer to a micro. DAMS office systems supplies an IEEE cartridge to allow a Vic or 64 to connect to any Commodore printer (or disc drive for that matter.)

The Spectrum will only work with a ZX printer, but you can use the RS232 connection on an Interface 1 to link a large range of printers. If you have a Centronics-type printer then Kempston will supply you with a suitable interface for a Spectrum.

If you own a computer other than a Sinclair machine but would be perfectly happy to use a cheap (£40) Sinclair printer, you can get a suitable interface for many popular micros, including the BBC, Dragon and Vic, from Microtanic Computer Systems of London.

LIGHT SENSORS

Another way of controlling a game is with a light sensing device. Usually mounted in a pen-like barrel (and, therefore, called a light pen) these allow you to draw patterns on the screen as though it were a piece of paper.

Recently launched is the Light Rifle from Stack Systems of Bootle, Merseyside. It comes with three demo games where you have to shoot at targets on screen, just like those old TV game machines, but these games are better as they rely on all the facilities of the micro. You can also write your own shooting-time programs. The light rifle costs just under £30 and versions are available for the Spectrum, Vic and 64.

C & VG SOFTWARE FORM

Have you written a games program which you feel is just right for C&VG? If so we have come up with a form to ensure that we can test it out and give you our views on it, as quickly as possible.

We would prefer a tape and listing but can work from just a tape and will return it to you if it doesn't find its way into the magazine. We will also need an additional sheet explaining the game and its theme. And any documentation like lists of variables or how certain routines are working, would be of great help to beginners. Please make sure that your name, address and the program name is on everything

you send us, including the cassette itself.

This form will merely help us to keep a check on your game as it goes through our testing process and make sure we have all the information we need to present it properly in the magazine.

If you don't want to cut up the magazine, we will accept photocopies or close copies of this page. This form will be appearing regularly in C&VG issues from now on.

Remember we pay £10 for each listing published and you could win our Programmer of the Year Contest where we will try to turn the winner into a best-selling games author.

GRAPHICS

By Garry Marshall

MAKING THE MOST OF YOUR 64

Over the next few issues, I shall be looking at the graphics capabilities of the Commodore 64. This new computer has very impressive graphics facilities, which I'll be helping you make the most of.

I'll begin by looking at the way that user-defined characters are created. In fact, the entire keyboard is "soft" in the sense that it is possible to redefine the character that is associated with every key.

This is possible because the Commodore 64 really does have 64k of random-access memory. All the ROM, including the Basic ROM, the operating system ROM and the character generation ROM, is covered by RAM, so that ROMs can be switched out and the range of characters that they provide supplied instead by RAM.

Because of this, the characters that are stored in the character generator and printed from the keyboard can be copied from the character generator ROM into RAM so that all the characters are available when this ROM is disabled.

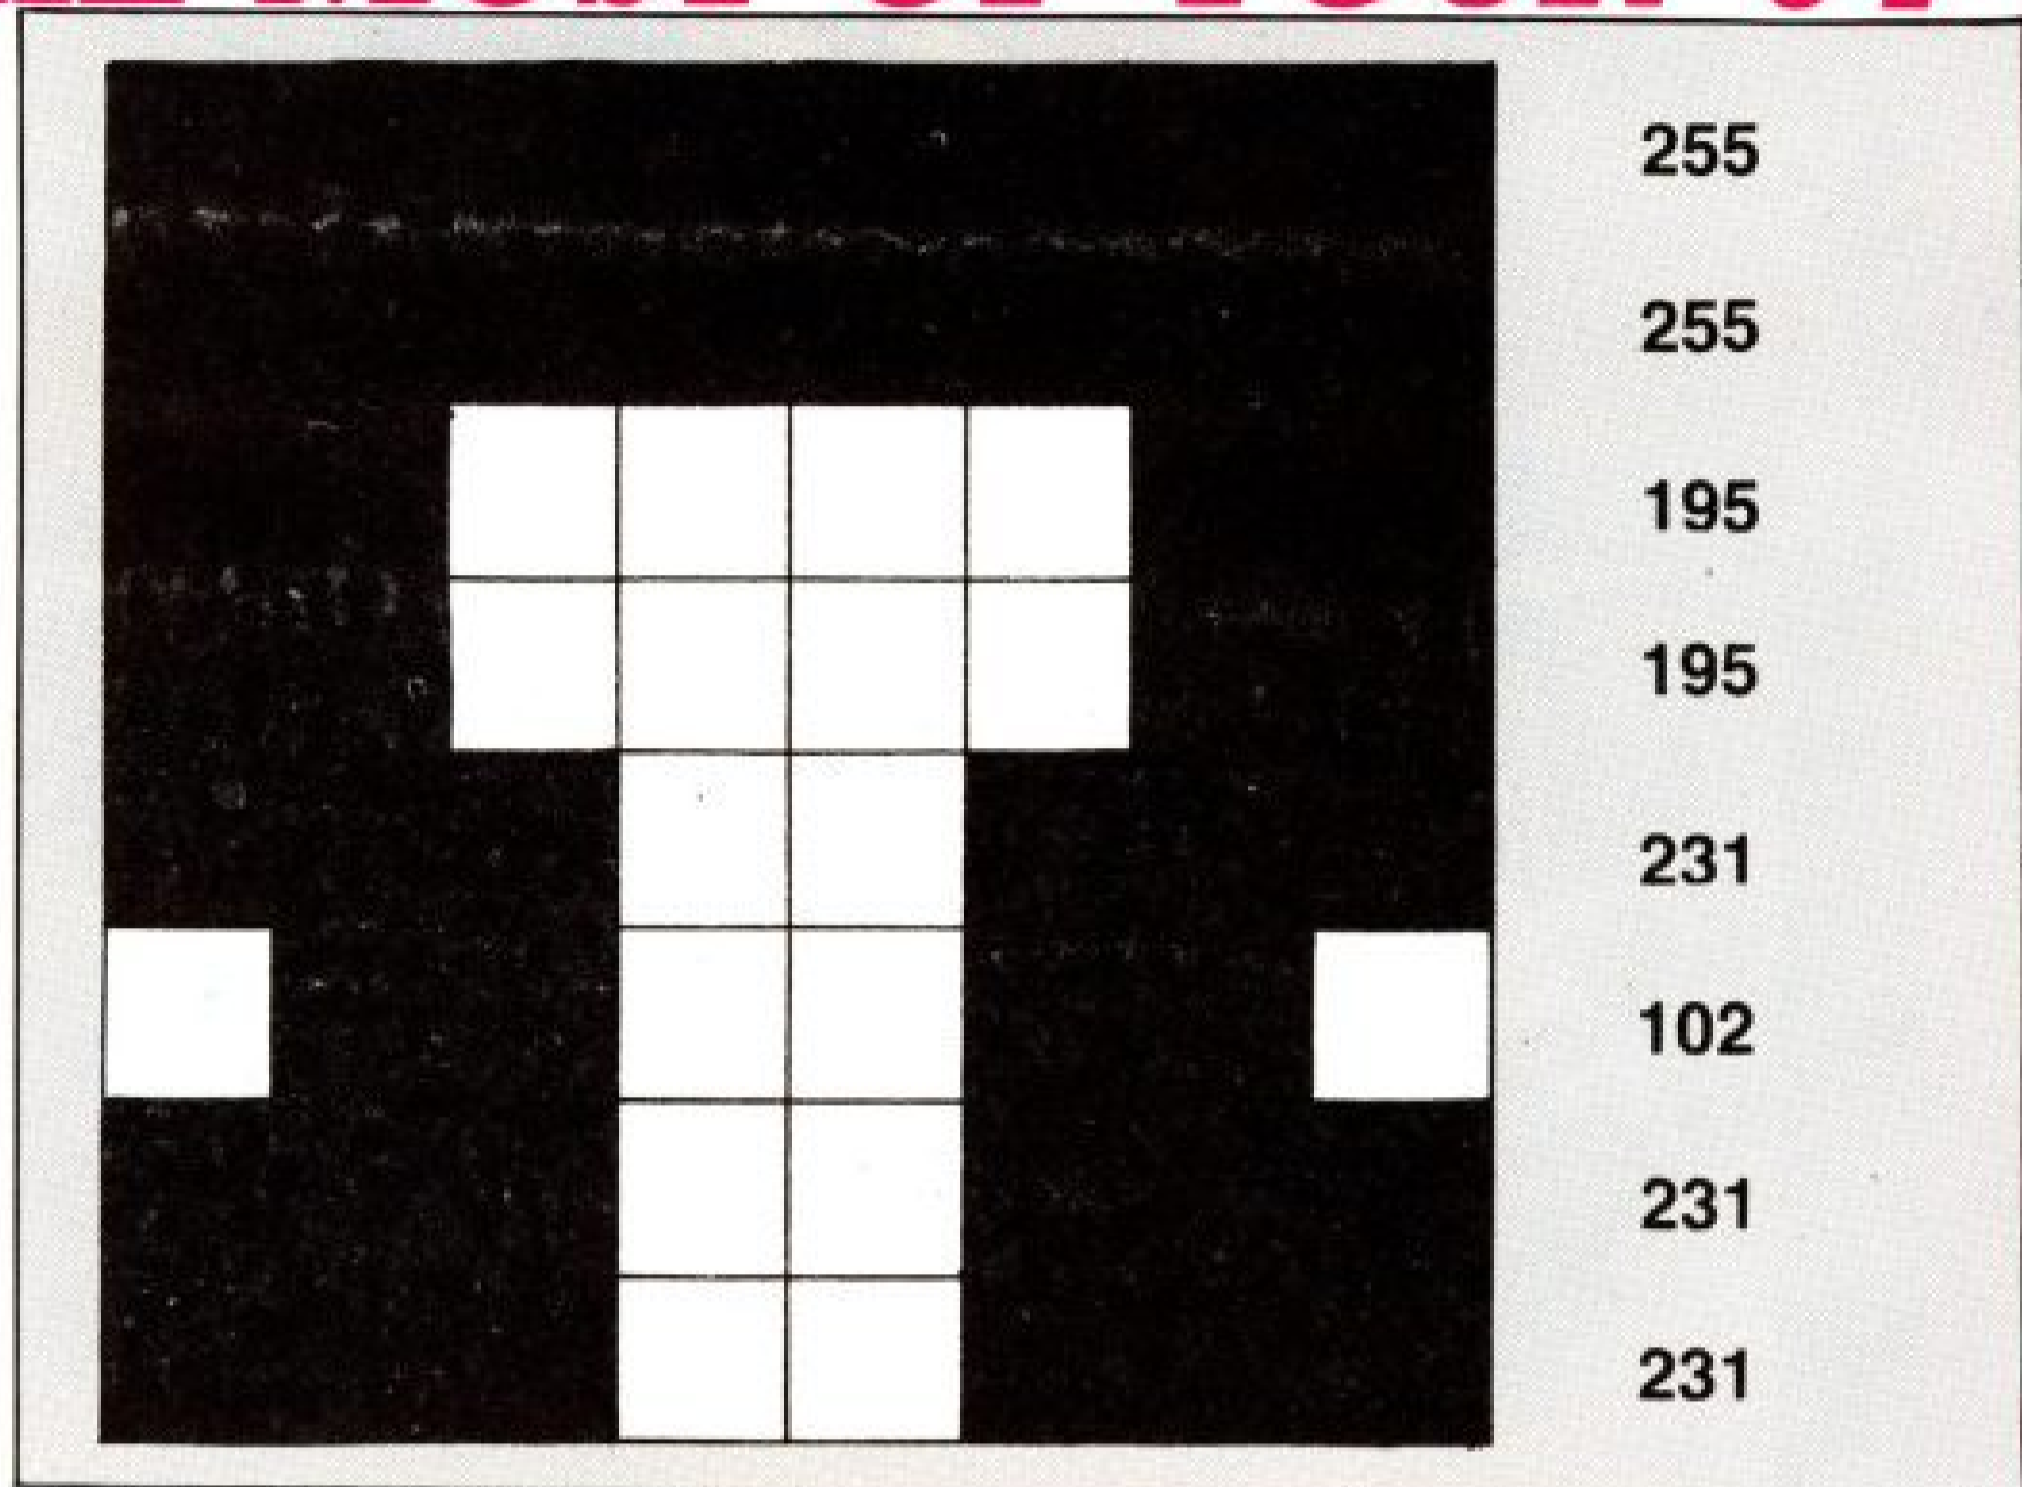

Then we can change the characters associated with any key as we wish. To write the program to do this, all we need to know is the addresses of the registers that control the operations involved.

The characters themselves are based on an 8x8 dot matrix. Each dot can be on or off, and the resulting character is defined by using a 1 for a dot that is on and a 0 for a dot that is off. Then each row of the character is represented by the decimal equivalent of the binary number for the whole row. This is illustrated in figure 1.

In this way, we could design a completely new style for each letter of the alphabet or a set of graphics characters for a particular application.

The program I shall give allows the character in the illustration to be assigned to the key associated with any letter of the alphabet to that, when that key is pressed, it gives this character rather than the letter.

The program starts by setting the contents of location 53272 to make the video chip take character descriptions from the area of RAM

starting at the location with address 12288, rather than from the character ROM.

Line 20 prevents this area of RAM from being overwritten by a Basic program. Then lines 30 and 40 permit the character ROM to be assessed so that its contents can be copied into RAM with lines 50 to 70.

Lines 80 and 90 then return the computer to its original state. Lines 100 and 110 request that a letter is entered from the keyboard, accept an input and check that it is a letter, before allowing control to pass to the remainder of the program which assigns the character in the illustration to the key for that letter.

If you run the program, you will notice that all occurrences of the letter on the screen are replaced by the graphics character straight away. This is because the screen refresh circuitry now refers to the area of RAM prescribed by the program rather than the character ROM for character descriptions. Also, of course, pressing the key for the letter given to the program now gives our character rather than the letter itself. The program can be used as the basis of a scheme for changing the characters associated with any and every key on the keyboard.

More on the Commodore 64's interesting graphics capabilities in the next issue.

The program is:

METAGALACTIC LLAMAS BATTLE AT THE EDGE OF TIME

A fast and original game for the unexpanded VIC. Challenging and colourful, with good sonics and a unique game action and design, this promises to be the most exciting new 3.5K VIC game since the introduction of GRIDRUNNER nearly a year ago.

£5.50

LASER ZONE

Experience Laser Zone - an utterly NEW totally ORIGINAL masterpiece of Video games design. Learn to control two spaceships at once. Feel the EXHILARATION as, after long hours of practice, you control the two ships so that they function as a smooth, co-operative team! Feel the raw POWER as you lunge for the electro button and BLAST your enemies into expanding clouds of SPACE JUNK!! Feel the humiliation as a carelessly aimed BLAST slams into the side of your last remaining ship!! 8K expansion required. Available for Commodore 64 £7.50 and VIC-20 £6.

MATRIX

Jeff Minter has taken Gridrunner - the game that topped bestseller charts in USA and UK - and created an awesome sequel. Graphically superb, it features multiple screens, new aliens and attack waves, mystery bonuses, renegade humanoids, deflexor fields, diagonal tracking, countdown/panic phase and much, much more... Packed into 20 mind-zapping zones and accompanied by incredible sonics. 8K expansion required. Available for Commodore 64 £7.50 and VIC-20 £6.

HOVER BOVVER

A totally original arcade game for C64 featuring outstanding graphics and a sound track created by a professional Piano Wizard. Gordon Bennet has

borrowed his neighbour's Air-Mo lawnmower. Mow your way through as many of the 16 lawns as you can before the pursuing neighbour retrieves his mower. Set your dog onto the neighbour to help you out of tight spots and don't annoy the gardener. Try not to plough through the neat flower beds or overheat your mower!

£7.50

ATTACK of the MUTANT CAMELS

Planet earth needs you! Hostile aliens have used genetic engineering to mutate camels from normally harmless beasts into 90 foot high, neutronium shielded, laser-spitting death camels! Can you fly your tiny, manoeuvrable fighter over the mountainous landscape to weaken and destroy the camels before they invade the humans stronghold! You must withstand withering laser fire and alien UFOs. Game action stretches over 10 screen lengths and features superb scrolling, scanner 1/2 player actions and unbelievable animation! Play this game and you'll never be able to visit a zoo again without getting an itchy trigger finger! Awesome m/c action! Available for Commodore 64 £7.50.

REVENGE OF THE MUTANT CAMELS

At last the long awaited sequel to Attack of the Mutant Camels is available. You are controlling a ninety foot high, neutronium shielded, laser spitting death camel; leading a rebellion against your evil Zzyaxian overlords. The game features beautiful smooth scrolling graphics and no less than 42 different attack waves, more than any game in video history. The challenge of play will last for months as you battle to see what's on the next wave.

GRIDRUNNER

Finally true arcade quality on the unexpanded VIC! Shoot down the segmented DROIDS invading the grid. Beware of the pods and zappers! The awesome speed, sound, and graphics gives you the best blast available for unexpanded VIC. Available for VIC-20 £5.00 Commodore 64 £5.00 Atari 400/800 £7.50

LLAMA SOFT GAMES NOW IN BOOTS.
- LASKYS AND MANY OTHER RETAILERS

WELL, JUST WHAT IS A MANDROID . . . ?

I spy with my little eye something beginning with C&VG! Yes, it's next month's reader friendly magazine all ready to banish the post-Christmas blues.

And have we got some surprises in store! Come with us on a trip into the murky world of international espionage, agents, double agents, triple agents and even quadruple agents — if we can learn to spell it in time.

Watch out for the front cover with a James Bond touch — and the special free gift. We're not telling you just what the gift is yet — who knows the KGB might be listening in, or the CIA might have this typewriter bugged.

The man behind the Seventh Empire and our amazing 3D programs, Mike Singleton, has come up with another winner. A computer-moderated board game!

Mike will be supplying the programs — and C&VG will be bringing you the world — well a map of it anyway — so you can muster your intelligence forces and beat your evil opponents. A big full-colour map/board will be found splashed across the centre of our next issue and there will also be a computer overlay to help you play the game — plus that special secret free gift!

Demand for this special issue is bound to be high — so why not place an advance order with your newsagent now — but beware he might be a Masterspy!

THE PROGRAMS

Have we got some great games for you next month? You bet! For Spectrum owners we delve into the magic of 3D graphic once again — but you won't need the special glasses this time! It's a 3D maze game written by Henry Wright for the 48k Spectrum.

For the Commodore 64 we've got a graphic adventure-style game called Centre Crystal. Go on a quest for the lost crystal in this multi-screen game.

Texas owners can catch up with the Scramble craze with our arcade-style all action shoot out called Air-strike. There's more warlike action for Vic owners in Minefield. Out in the desert lurks a tank commander blasting away at enemy planes and tanks — could it be you?

We take Atari 400 owners back to medieval times with Wall Defence. Can you protect your castle from stealthy enemies?

Go for gold on the Dragon 32 in Gold Prospector. Climb a building to reach the gold — but watch out for acid baths and bottomless pits.

Sharp owners who like to take a gamble will enjoy Slot Machine — an accurate representation of those money grabbing one armed bandits — but this one will only cost you the price of this magazine.

There will be other listings too —

lest bleep from it.

So it looks like the now infamous Seventh Empire gremlins have pulled out all the stops to get their claws into the Empire in its dying stages. But rest assured Empire freaks, we will resurrect the office Pet in time for the next issue when we WILL announce the overall winner of this interstellar conflict.

Anyway, for now we'll just have to grovel and apologise for the Pet.

Now where did I put that baseball bat. I'll give it Christmas spirit. . .

This here's my newsagent

but we're keeping those secret. So don't forget to rush out to your newsagent on February 16th and grab a copy of *Computer and Video Games*!

THE EMPIRE

As you may have already guessed the Seventh Empire is missing from the pages of this issue. What's the excuse this time!

Well, it's like this you see. There we were, happily feeding our office Pet the Empire instructions for the final move, when all of a sudden it says: "Look, everyone else is having a good time getting ready for Christmas and you are expecting me to process all this Empire business! I've got relatives too, you know. And I've got to get a present for my little Vic 20. With that, its screen went blank and we couldn't raise even the smal-

Me'n my newsagent are real close. His name's Bill or Fred or something . . . Anyway we got an arrangement. Every month, you know what he does? He looks out my copy of *Computer & Video Games* and keeps it, just for me.

So none of the other punks on the street can get hold of my copy. And that's important to me. Mebbe it's important to you too. So go n' see your newsagent with that coupon below all filled out. If he's like Harry here, you're gonna like him.

To my newsagent: Please deliver/reserve me a copy of *Computer and Video Games* every month. Price 85p.
