THE ARCADE EXPERIENCE

CONTROLLER™

4 million gamers can't be wrong.

Only the Sega Saturn can bring the arcade experience of some of the world's most popular games such as Virtua Fighter 2, Daytona™ USA, Virtua Cop 2 and Sega Rally to your home - these games will never be seen on any other videogame system. Sega has a superior software library with a range of arcade perfect conversions, games developed by leading Third Party Publishers and Sony Psygnosis titles such as Destruction Derby™ and Wipeout™. As the Sega Saturn moves into the second and third software generations, the system's potential and technological superiority have been unveiled. Programmers can exploit the power of three 32bit processors with five other processors to create games with graphics, moves and animation which have never been seen before.

"Programmers are finally learning to utilise the Saturn's unique VDP 2 (video display processor) chip.. The chip can generate and manipulate 2D backgrounds, leaving the Twin processors free to deal with the characters themselves. The result is swift, elegant animation at 60fps- that's the same speed and fluidity as VF2 coin-op and 'Tekken', too.

The VDP 2 chip could be the key to success for Sega: the Playstation does not have an equivalent chip and demands for better animation and more realistic movement and placing greater and greater pressure on each console's processing power. It seems that, in terms of hardware, the next bout between Sony and Sega could be most telling..." Edge Magazine December 1995

The Sega Saturn is the leading games system. It has greater internal memory than any other 32bit console system, allowing you to save more levels before using additional back-up memory.

In addition Saturn's second generation software offers full screen visuals without black borders - something which other 32bit systems don't deliver. The Saturn offers CD quality sound and has optional extras such as the Video CD Card and Photo CD. The Sega Saturn will shock your system.
